Other Performance Measurement Data: *(If reporting with another methodology)* Describe what is being measured: Numerator: Denominator: Rate: Additional notes on measure:	**Other Performance Measurement Data:** *(If reporting with another methodology)* Describe what is being measured: Numerator: Denominator: Rate: Additional notes on measure:	**Other Performance Measurement Data:** *(If reporting with another methodology)* Describe what is being measured: Numerator: Denominator: Rate: Additional notes on measure:

Explanation of Progress: The rate for the Childhood Combination 2 measure for the 2005 measurement year is at 64%. This combination rate includes one more vaccine than the combination 1 rate reported in the past years and which has now been retired by NCQA. Hence, the reported rates in the current year and preceding year are not strictly comparable. DMAHS has set an 80% performance standard for the HEDIS combined rate for immunizations for 2 year olds and requires HMOs to implement quality improvement projects (QIP) that are focused on achieving this EPSDT performance standard. DMAHS works closely with HMOs and providers to promote the regular preventive services and adherence to the immunization schedule recommended by the Advisory Committee on Immunization Practices (ACIP).

Annual Performance Objective for FFY 2007: The ultimate objective is for 80% of two year olds to receive the recommended vaccines by age two. It is our aim that the rate will incrementally increase by at least 3% each year.

Annual Performance Objective for FFY 2008: The ultimate objective is for 80% of two year olds to receive the recommended vaccines by age two. It is our aim that the rate will incrementally increase by at least 3% each year.

Annual Performance Objective for FFY 2009: The ultimate objective is for 80% of two year olds to receive the recommended vaccines by age two. It is our aim that the rate will incrementally increase by at least 3% each year.

Explain how these objectives were set: **Based on past rates, we are aiming for a 3% improvement each year.**

Explanation of Progress: The rate for the Adolescent Combination 2 measure for the 2005 measurement year is at 48%. This combination rate includes one more vaccine than the combination 1 rate reported in the past years and which has now been retired by NCQA. Hence, the reported rates in the current year and preceding year are not strictly comparable. DMAHS works closely with HMOs and providers to promote the regular preventive services and adherence to the immunization schedule recommended by the Advisory Committee on Immunization Practices (ACIP).

Annual Performance Objective for FFY 2007: The HEDIS Adolescent Combination 2 rate will incrementally increase by at least 3% each year.

Annual Performance Objective for FFY 2008: The HEDIS Adolescent Combination 2 rate will incrementally increase by at least 3% each year.

Annual Performance Objective for FFY 2009: The HEDIS Adolescent Combination 2 rate will incrementally increase by at least 3% each year.

Explain how these objectives were set: **Based on past rates, we are aiming for a 3% improvement each year.**

Other Performance Measurement Data: *(If reporting with another methodology)* *Describe what is being measured:* **Percentage of children 18 months to 29 months as of the last day of the SFY who were continuously enrolled in one HMO and received one or more blood lead screenings in the SFY. Children were considered continuously enrolled in one HMO if they were enrolled for at least 11 months of the 12-month time period under study. The rate is specific to children in the NJ FamilyCare program.** Numerator: **5822** Denominator: **11,371** Rate: **51.2%** *Additional notes on measure:* **In order to determine the lead screening rates among children enrolled in the managed care program, the EQRO examined encounter data and the New Jersey Department of Health and Senior Services (NJ DHSS) Childhood Lead Poisoning Surveillance System (CLPSS) laboratory data, which in combination provide the most comprehensive and complete picture of lead screening activities.**	**Other Performance Measurement Data:** *(If reporting with another methodology)* *Describe what is being measured:* **Percentage of children 18 months to 29 months as of the last day of the SFY who were continuously enrolled in one HMO and received one or more blood lead screenings in the SFY. Children were considered continuously enrolled in one HMO if they were enrolled for at least 11 months of the 12-month time period under study. The rate is specific to children in the NJ FamilyCare program.** Numerator: **6,618** Denominator: **12,486** Rate: **53%** *Additional notes on measure:* **In order to determine the lead screening rates among children enrolled in the managed care program, the EQRO examined encounter data and the New Jersey Department of Health and Senior Services (NJ DHSS) Childhood Lead Poisoning Surveillance System (CLPSS) laboratory data, which in combination provide the most comprehensive and complete picture of lead screening activities.**	**Other Performance Measurement Data:** *(If reporting with another methodology)* *Describe what is being measured:* **Percentage of children 18 months to 29 months as of the last day of the SFY who were continuously enrolled in one HMO and received one or more blood lead screenings in the SFY. Children were considered continuously enrolled in one HMO if they were enrolled for at least 11 months of the 12-month time period under study. The rate is specific to children in the NJ FamilyCare program.** Numerator: **7,787** Denominator: **13,473** Rate: **57.8%** *Additional notes on measure:* **In order to determine the lead screening rates among children enrolled in the managed care program, the EQRO examined encounter data and the New Jersey Department of Health and Senior Services (NJ DHSS) Childhood Lead Poisoning Surveillance System (CLPSS) laboratory data, which in combination provide the most comprehensive and complete picture of lead screening activities.**

Explanation of Progress: The lead screening rate has steadily increased over the years. Successful strategies from the multi-organization collaborative pilot project in Camden and Irvington cities are being expanded statewide. These strategies include the promotion of in-office screenings, and collaboration with day care centers, local and state agencies to promote public awareness on the importance of lead screening and provider compliance with screening requirements. Amendments in the managed care contract has also been made in the past years to include an enhanced payment for in-office screenings and the requirement to send letters to PCPs who have lead screening rates of less than 80% for two consecutive six-month periods and educating them on the need and their responsibility to provide lead screening services.

Annual Performance Objective for FFY 2007: The lead screening rate will increase by at least 3% from the previous year's rate.

Annual Performance Objective for FFY 2008: The lead screening rate will increase by at least 3% from the previous year's rate.

Annual Performance Objective for FFY 2009: The lead screening rate will increase by at least 3% from the previous year's rate.

Explain how these objectives were set: **Based on the rate of increase in the past 3 years, we estimate that an annual 3% improvement is realistic.**
