The reclaimed reach is between River Station 6.01 and 2.00. This reach of channel is riprapped. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Station 10.06 and 2.50. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Stations 248.59 and 33.20. The remaining upstream and downstream reaches are undisturbed or pre-mine channels. The shaded areas on the table are riprapped reaches. The undisturbed and riprapped reaches were not included in determining the maximum, minimum, and average velocities.

The reclaimed reach is between River Station 6.01 and 2.00. This reach of channel is riprapped. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Station 10.06 and 2.50. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Stations 248.59 and 33.20. The remaining upstream and downstream reaches are undisturbed or pre-mine channels. The shaded areas on the table are riprapped reaches. The undisturbed and riprapped reaches were not included in determining the maximum, minimum, and average velocities.

The reclaimed reach is between River Station 6.01 and 2.00. This reach of channel is riprapped. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Station 10.06 and 2.50. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Stations 248.59 and 33.20. The remaining upstream and downstream reaches are undisturbed or pre-mine channels. The shaded areas on the table are riprapped reaches. The undisturbed and riprapped reaches were not included in determining the maximum, minimum, and average velocities.

The reclaimed reach is between River Station 6.01 and 2.00. This reach of channel is riprapped. The remaining upstream reach is undisturbed or pre-mine channel.The riprapped reach and the undisturbed reach upstream of the mine lease were not included in determining the maximum, minimum and average velocities. The shaded areas on the table indicate riprapped reaches.

The reclaimed reach is between River Stations 248.59 and 33.20. The remaining upstream and downstream reaches are undisturbed or pre-mine channels. The shaded areas on the table are riprapped reaches. The undisturbed and riprapped reaches were not included in determining the maximum, minimum, and average velocities.
