Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Our delicate ecosystems are constantly being eroded and soon we will have corrupted everything! Please do what you can now to protect this area, thank you.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
chris measamer

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
thomas kozlovsky

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Candice Delbaio

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Interesting, you say what does pollution and CHEMICALS and pesticides/ and HERBICIDES that somehow might have gotten into the water unnoticed-- cause? -- sounds like several good research projects for science teahers, science students and science researchers. As a visitor to the area it was awesome to take a swim with the local swimers in the Boston, Mass area. Thank you! and keep up the good work!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
brianna thornton

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lee Pettenger

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Anne Nielsen

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mackenzie Caffarel

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
debbie hare

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Laurie Ware

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Anthony Schultz

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Barbara Day

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Nature should be left as is, unless it (the ecosystem or some element of one) poses great or meaningful harm to humans. That bsically means that almost no-matter what, nature should be protected. We need to preserve these creatures in the Gerry E. Studds Stellwagen National Marine Santuary, not harm them in any way, shape or form.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Pamela Haun

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nicole Imhof

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
June Marshall

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ruth Butler

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Felicia Levine

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

This plan is a step in the right direction.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Laurie Freeman

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Elizabeth Lockley

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Brittney Hewitte

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
John McCarthy

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Say yes to marine life protection.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please help protect creatures that are unable to protect themselves.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
hurrikayne hurrikayne

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Susan Walker

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Annie Outram

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

What will we tell our children?
That we just didn't care enough, and thats why we recked their earth?

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Amy Collins

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We need to protect our oceans and marine ecosystems, they are one of the most versatile ecosytems out there. They are a sanctuary for so many species of fish and marine life. In the face of danger form pollution, global warming and ships it is important that we do our best to protect our enviroment, because without it we are nothing.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Faon Lewis

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Terry-Anya Hayes

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mary Fahey

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ma Bailey

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Penny Stone

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

If we don't protect the marine wildlife now, there, soon, won't be any to protect.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lora Condon

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Rita Smith

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Aashish Rathod

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

I have been visiting this area for probably 15 years and the marine life that depends upon the Stellwagen Bank are amazing, unique and vital. When we lose so much of the natural world something inside of us as well is lost and dies. Something that cannot be replaced. We need to do whatever it takes to protect our wild places.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jill Goldman

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Donna R.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

I feel that if we don't protect place like Stellwagen Bank, we are ensuring our own extinction. By polluting our own waters and very important food supply, we guarantee that not only the wildlife but WE will not be around in the future. Step must be taken NOW to ensure the protection of this most important marine santuary. Thank you.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Our family of seven strongly urges you to do whatever is necessary to RESTORE, MAINTAIN & PROTECT this Marine Sanctuary--there are so few places on God's earth that are pristine any longer--and the Stellwagen Bank National Marine Sanctuary is feeling enormous pressure of pollution and trawling, dragging and fish depletion, not to mention the trials faced by ever-present Global Warming--it is a MUST that we as humans and as a nation do what is necessary to protect this rich and marvelously diverse marine habitat. DO WHAT IS RIGHT!

Let's achieve the vision of a Stellwagen Bank teeming with a

great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mark Larsen

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

It is my fervent hope that with the problems so clearly identified, immediate remediation efforts can be facilitated. There is no commercial entity in existence today that can claim ignorance of the harm old systems and practices have wrought on every environmental system. We surely cannot afford further threats to life on Earth caused by continued attacks on our Marine Ecosystems.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Stellwagen Bank needs a step towards protection and restoration of this ecologically important area. This area is much more likely to draw visitors if the whales, sea turtles, fish, birds and cold water coral are alive and living well in the area. This in turn brings benefit to the state. Lets work on getting this area protected and restored.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Toni Sokoloski

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Amelia Zahoor

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Torok Tamas
nevermind that

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lynn M. Howie

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dorothy Wyatt

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Robyn Campbell

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Marien life needs help!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
phyllis hugins

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Liz Mugavero

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Traci Bruce

Leave the ocean life alone. they have a right to live also. Should we kill off humans too -- because their are way to many? The blacks do it and so do the foreign countries. Should we be like every other country also. With no freedom for our animals and thier homes? God created every part of this planet. Let's be nice to each other.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Don Ball

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Dragging is a horrible practice that kills marine life and impacts food resources of other marine life. We need more environmental protection and to secure this area for all species. Pollution in our food is pollution in our bodies at 10 times the concentration. For the health of marine life, the earth and people, please take steps to restore this habitat.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
amie Kovitvongsa

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Elaine Sharpe

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
ken burden
