Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
James Milne

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

A number of years ago I took a whale watching trip out of Hyannis to the vicinity of the Stellwagen Bank and was greatly impressed by the experience. I urge you to begin the process of protecting and restoring this treasured but highly endangered marine area.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Howard Snyder

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jill Fenaux

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Alfred Willowhawk

The ocean is not our planets toilet! The poisoning of this vast watery ecosystem is gravely affecting the marine inhabitants. As we rely on the oceans for food, we will be adversely affected by the poisons too. Its high time we take responsibility for our home, Earth, and treat the environment with respect. ONE EARTH, ONE CHANCE!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Thomas Thompson

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Having worked for a local MacDonalds in my youth, I feel that I am qualifyed to say: YOU ALL ARE THE MOST GLUTTONOUS, SELF-SATISFYING GROUP OF OWNERS IN THE INDUSTRY, & IF THERE IS A HELL, YOU WILL RIGHTLY BURN THERE, DUE TO YOUR MONSTROUS ABATEMENT OF FOOD QUALITY! ASIDE FROM PAUL NEWMAN, YOU SUCK!!!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Tiffany Walton

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We must preserve our shared natural resources.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Katherine Donalek

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Karin Keeling

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Judith Elliott

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Susan Adoryan

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
GINENE MASSIE

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Our Planet Earth is three quarters ocean water. It seems to me there is plenty of space out there to fish without disrupting breeding and feeding areas. We must literally "clean up our acts". Just because you can't see the pollution, doesn't mean its not there. Look what has happened to our precious Chesapeake Bay, (once covered richly with oyster beds and the famous Blue shell crabs) Now, dwindling into a dead zone. We must learn from these experiences so that it is not repeated around the globe. It is happening now, right before our eyes!!! Roll up your sleeves and lets get to work. Do whats right to protect our future and our childrens future. Imagine life, when

the oceans can no longer feed the world...

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
cindy bryson

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Science knows what to do to right these problems. The good of all and not the good of the few should be considered. We can have a healthy planet, if only we follow the rules of nature, and not the rules of making money at all costs.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Valerie Plumlee

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dan Jeremy Brooks

Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ellyn Vohnoutka

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mari Gorzenski

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
patricia eisenberg

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mary Lundquist

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Dear Superintendent MacDonald, I have visited Massachusetts on vacation and have actually gone to see the whales, etc. I have never forgotten my incredible experiences. I will also not forget all those other families and individuals who were with me at that time. They were thrilled to see the beauty and majesty of the whales and other sea life. This must be preserved for future generations. I only hope that someday I will be able to return once more to the beauty that I remember. Pictures cannot begin to describe what I personally experienced. Please take care of this treasure by protecting it forever.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Trawling the stellwagen Bank will remove tons of marine animals used as food by many fish and mammals, including humpback whales and commercially valuable food fish. This would force commercial fisherman to expend more fuel to make a catch of these important fishes. The trawlers, in conrast to the long-liners, take everything indisciminately, and destroy their own and other's livelihoods. A marine sanctuary should remain a sactuary, not to be exploited. Please don't do this.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by

diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jody Riley

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please keep this marvelous marine sanctuary protecting this special place for all marine life. Thank you.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Valerie Merrill

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Clairone Delaney

We must do everything possible to protect our marine wildlife, no matter the location. We must stop the president from allowing further pollution and backing large corporations from contaminating. The corporations are very foolish. They only think about profits. They fail to realize the environmental disasters will effect them as well as the average citizen. Their large profits and obscene pay checks will not protect them and their families. They must learn to be good citizens.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Elke Romer

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Sanctuary: a place of refuge or safety. If you're not going to provide this, take it out of the title. If you're not going to provide this, The Gerry E. Studds Stellwagen Bank National Marine Sanctuary becomes just another stretch of ill and dying ocean, the ultimate result of which is and will be an ill and dying world. Please recognize the need for, and the allowance of, the NOAA management plan. Please, don't turn your back and pretend, all is well. All is not well.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by

diverse, healthy habitats in clean ocean waters.

Sincerely,
Linda Brink

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Hey, The whales need to be protected. Our world is suffering and dying because we don't take care of it as we should. Soon, because of our carelessness, all the beauty of the earth and the animals in it will cease to exist if we don't take action. I vote to save the whales by signing petitions and doing whatever else I can to help.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Bella berry

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Amber Hughes

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
George Grover

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Something has to be done to ensure the health of the ocean. It will benefit everyone. We need to come together with solution to the problems of overfishing, harmful and toxic chemicals entering the waterway and destructive practices. If there isn't any fish there will not be any fishing industry.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nancy Houghton

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ana Lisa Rodriguez

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kim Schwab

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

You see, just another thing to mess up mother nature.you guys talk to us about global warming but who is it that don't care,you guys.you say we got to protect the land and so we do and then we get reports of things going on like this.what is your point into doing things like this.can't you find another spot to do your thing?these animals have a right to clean waters just like we do.not to mention that it is their homes that you people are destroying.think about it,would you like them to destroy your homes?i am just one of many people out there that are animal lovers and a lover of mother nature.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Julie Aber

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
annalisa osterhout

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Gayle Doukas

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Why do we need to beg to protect and restore a sanctuary? Why do we have to beg to protect our animals, plants, the land? Please remember why it was deemed a sanctuary. Definitely needs to be repeated: "THE EARTH DOES NOT BELONG TO MAN, MAN BELONGS TO THE EARTH".

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nicole Lefavour

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

There are too many negative contributors to this situation that will take a lot of time and effort to control such as pollution and global warming. Please do immediately what needs to be done as recommended in the management plan to ease the renaissance of this vital area.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ruth Merrill

Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Michele Cabot

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
MaryAnn Ford

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Alison Smith

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Daniela Molnar

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

After years of ruthless whaling and exploitation, all Americans are obligated to assist in the whales and other marine life in reclaiming their natural habitats.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
H. Austin Hall

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Everything that can be done must be done to protect the habitat of the mighty whale; and indeed all ocean life. Thank you.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jillian Greenriver

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Denise Dunlap

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Melody Ford

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
KAREN ATCHISON

Every living thing on this planet has the right to live. What gives mankind the right to choose by their thoughtless actions, that cause the demise of ancient animal/mamal life...who lives..who dies?
Who will be next? Mankind! We will have no one to blame but our selfish attitudes toward what we conceive to be " progress"!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Charles Beard

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Help protect Stellwagen Bank by signing this petition.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
John Jennings

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
kristen swanson

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We are on the verge of such a sudden and terrible change in the Earth. Please do the right thing and do what is suggested to help restore and save this area.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Faye Ferrall

Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kate McWiggins

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ann Capotosto

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

I urge you to please protect this area for future generations to enjoy. As I watch my grandchildren grow, I would like to believe that these areas will continue to exist so they can enjoy the sight of free whales, meeting sea turtles in their true habitat, exploring a cold water reef, things that will be permanently lost, not just to my grandchildren, but to all the children as they grow, if we do not protect this wonderful and miraculous area. We need to do this.

As you think and ponder on this subject, I ask you to remember words that were the center piece of EXPO 74, the world

exposition on the effects of pollution and importance of caring for our earth, the expo that foresaw what we are dealing with today in our environment, in our world. Those proud, powerful and truthful words are "THE EARTH DOES NOT BELONG TO MAN, MAN BELONGS TO THE EARTH". So please, I ask you respectfully, Care for this planet that we all belong to and protect this region from further damage.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Michael Comins

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Marysol Torres

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
ANDREA FILOMENO

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jane Reynolds

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Greta Bell

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mary Bjork

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
ERIN MORIARTY

I don't agee that whales should be hunted for aphrodesiates and parts of their body for delicacy. People shouldn't mame or kill them cause they are defensive or for the heck of it . Global warmth caused by man should be curbed. As far as ship collisions I don't that can be helped. This other things can. Let's go to work on this!
