Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Stacy Bodow

We have got to do a better job of protecting the oceans. This past May on Ocracoke Island, I picked up many bags of trash from the beach, and that is an unusually clean beach. Most of the stuff came from boats, thrown overboard by idiots. People need to be aware that the ocean is a living thing and needs our respect.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Michael Frechette

Here's a chance to do something that will Protect what we, as a human race have taken advantage of and destroyed. You realize it will take much longer to salvage what we have already lost. So it would only make sense to protect what little we have left.

Please take all protective stands to not give in to narrow minded corp. greed.

Drastic changes must be made, and everyone must do their part, and get use to the necessary changes, that are WAY OVERDUE!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Andrew Fisher

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Doreen Puchalski

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lisa Gherardi

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kristin Clark Nolan

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kristina Tezak

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
iris lambka

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kimberley Hagen

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
LINDA HERNANDEZ

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Cathy Thornal

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Perhaps it is because it is such an important and diverse area, I have been aware of the struggles that Stellwagen Bank National Marine Sanctuary has been up against for a long time. I encourage you to find ways to best meet the needs of the diversity of marine life in this important area. With so much of our oceans being threatened, this can be a thriving underwater Marine Sanctuary success, thanks to your vision and leadership.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

All animals should have right to live in their own ecosystem without the fear of it being destroyed or corrupted by our human waste, and selfishness.

Chemicals and pesticides and such shouldn't destroy majestic animals that roam free in the wild. We can't keep killing off species for our own purposes.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Maria Macnab

THESE GENTLE GIANTS NEED OUR HELP. THEY LOOK TO US TO BE RESPONSIBLE, TO STOP MAKING THEIR LIVES MORE DIFFICULT. IF THEY CAN MAKE A ROUND TRIP TO THE WARM WATERS TO HAVE THEIR CALVES, PROTECT THEM FROM ATTACK AND PROVIDE MILK FOR THEM ON THE WAY BACK , ALL WITHOUT EATING UNTIL THEY GET BACK HERE. WE CAN MAKE THE CHANGES WE NEED TO MAKE HERE,TO MAKE THINGS BETTER FOR THEM. WE ARE MAMMELS JUST LIKE THEM. WE BOTH GIVE BIRTH TO LIVE YOUNG AND NURSE THEM WITH MILK. WE NEED TO TAKE CARE OF OUR BROTHERS. THEY LOOK TO US. LETS NOT DISSAPOINT THEM.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mary Saucedo

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Francesca Wigle

Superintendent MacDonald - I am aware that you know of the dangerous conditions that exist right now at Stellwagen.
It frustrates me that as we debate this stain on our planet, it worsens by the minute. This plan could easily be run down by dissenting, powerful lobby groups if we're not right on top of it!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Stephen Gross

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Benjamin A. Sheppard

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

I realize that some people feel their livelihood is affected with each attempt we, as the human race, make to protect and preserve...nonetheless, in each case during my 40 years, people have found creative new ways to live...and they shall do so again. And in most cases, people have prospered by doing so...eco-tourism is just one example. So, lets do what is right.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

My husband and I, along with our two teenage daughters took a road trip to this very area to take a trip on a whale watch boat in 2001. He was a good photographer and even though he was starting to be affected by the disease that would kill him two years later, he got a few good photos of the whales we traveled to see. I'll never forget that special area and the whales that call it home for feeding. This area must be protected for the sake of all concerned, especially the finned creatures that are part of the web of life.

Let's achieve the vision of a Stellwagen Bank teeming with a

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

The Chesapeake Bay Blue Crab is on the decline and will be gone completely in just a few years as well as other species. Everytime I see Lobsters penned up in Walmart I get angry. There are plenety of other things to eat. We need to let out sea/ocean life replenish itself for a few years. Our oceans are literally being fished out! Fishermen can find other work. The fish/sealife does not belong to them for profit anyhow. With all the illegals leaving or country there should be plenty of work!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by

diverse, healthy habitats in clean ocean waters.

Sincerely,
June Thresher

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
kelly gay

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dan Parker

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Gail gina Condon

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Doris Munger

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

For a sustainable economy which embraces the protection of our fisheries for future production, and our enjoyment, it is imperative that our nation's business and government leaders act in a more enlightened fashion in these areas of marine conservation. Advocacy groups should not have to constantly be hounding officials who should at this late hour be showing more effective leadership and wisdom. I implore you to do the right thing because as these species are impacted, diminished and become extinct then eventually so do we. Carelessness, complacency and greed are our enemy here. It is up to you to act to protect this marine life and by extension, we humans in the

bargain. It is a big task yet I have confidence in your abilities in this matter.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lela Male

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Christopher Detzer

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Robert Stockstill

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
David Radens

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Roseann Marulli

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Warren R Keller

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Martha Waltman

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Let put an end to destroying our natural resources. How long can we continue to keep our water clean. The damage that is being done to wild life is unimaginable and must stop if we are to survive as a species. Which in my opinion has no right being on this planet. We have done more damage with our so call intellect. I can't see how we will be able to turn it back if we don't start now!

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Shreeraj Sutaria

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Sarah Carter

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We need to start protecting and saving what precious life we have left on our planet. Humans have done nothing but kill and destroy everything they can on our earth...too many times for GREED. It's time for a change in the oposite direction...SAVE life, NOT destroy it!!! There are many wonderful groups trying their best to do this, to SAVE our planet for future generations. I believe ALL efforts should be made to do this, to help these people save our earth!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by

diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
tami Armitage

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Treat OTHERS (doesn't say just Humans) as you would like to be treated.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
K. Krueger

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Rick Smith

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
ciro Ros

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
monica collins

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Susan Maletksy

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Terry Maroney

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
eric Downing

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

I want to be a part of saving this planet.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Andrew Koshefsky

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Miguel Silva

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Just simply do what is right and protect habitats and species from extinciton.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
David Roberts Phd

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please endorse the Stellwagen Bank Management Plan proposed by the National Oceanic and Atmospheric Association that lays the foundation for restoring and protecting the sanctuary's ecosystem. Once this vital ecosystem is gone, it is gone forever! As stewards of God's creation, we must act immediately to protect the environment for all living things.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ron %pa_first_name% Gail Salatrik

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

This is very critical if we dont protect the marine life it will effect us in the food chain and have devasting effects on man (who are now are children and grandchild who will be effected).

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Elizabeth Williamson

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
JoTasha Traylor

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Biodiversity is essential to continued life for humans on this planet, as well. It is far beyond time to reverse our environmentally unsound and destrustructive path. Our oceans must be protected to allow them to begin the healing process.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Amy Anderson

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dawn Foley

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lauren Pringle

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Frances Whiteside

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We don't want soylent green to become necessary.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Andy Wallis Jr

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

My family and I just went on the most fabulous whale watch--we go every year. Not only do we need to protect this entire area, we need to protect these magnificent creatures, and keep them safe from harm's way, and all other marine life in this area. The entire bank is a very special ecosystem, land if it is not protected, it will slowly collapse. START the ball rolling, and keep it rolling. NOW, PLEASE! As a resident of Massachusetts, living on the coast, you can actually see the impact all of our dangerous behavior causes. Let us all do the right thing!

Let's achieve the vision of a Stellwagen Bank teeming with a

great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.
