Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Valerie Underwood

There needs to be an ocean sanctuary, as currently exists off Catalina Island, here in S. Calif. There the sea teems with healthy life, with kelp beds and their complete ecosystem preserved and protected - even in the face of calls from the president and his cronies to begin offshore oil drilling in the vicinity!
WE MUST protect our oceans!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

There is truly only one ocean; all bodies of water are connected and what affects the coastal waters in Massachusetts will eventually affect all other sea life; protecting the diversity of marine life there will begin to ensure the protection of our web of sea life everywhere. Now is the time!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Laura Lynch

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Della Cleve

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Fish and marine mammals are under so many threats all over the world, so I heartily encourage NOAA's efforts to protect the enviromnent of Stellwagen Bank.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Joanne Hesselink

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Olivia Delgado

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
PAT MANSFEILD

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Amy Hall

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Darlene Hagopian

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Cecelia Furman

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

It's time to start protecting our marine habitats.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nick Larkins

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Susan Solick

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

If we are to restore the ecology of our planet, it is efforts like the Stellwagen Bank Management Plan that will enable us to do so. The health of our marine species and their home is critical to the health of the planet. Please implement the management plan as soon as possible for all of us. The value and necessity of action now is critical. Thank you so much for hearing my voice.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Pam Halsey

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Naomi Hinchen

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Barbara Walker

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nancy Nadaner

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Chuck Dowe

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Barb Shank

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

A vital area like this must be protected!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Harry Harrison

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
robin dolbear

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Melissa McCool

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Peggy Murray

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jennifer Malik

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

THE WHALES AND PORPOISES ARE TWO OF THE MOST MAJESTIC ANIMALS IN THE SEA WE SHOULD BE PROTECTING THEM AFTER THE MASSACARES IN THE 19 CENTURY IN HUNTING THEM DOWN FOR THE BLUBBER WE USED FOR LAMPS INSTEAD OF KEROSENE. EVERY ANIMAL IS VALUABLE TO THE ECO-SYSTEMS THAT GOD PUT ON THIS EARTH AND THIS PLANET IS THE ONLY ONE WE KNOW WHERE LIFE ABOUNDS ON.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
CRAIG CLOSE

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Penny Gordon

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
ingrid pfoertsch

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

It is critical to look at the long-term health of the Stellwagen ... Sanctuary area rather than get caught up in short-term interests. By working collaboratively, and by understanding the long-term issues, a management plan could be implemented that ensures the health of this ecosystem for generations to come.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Gail Quinteros

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kathryn Morgan

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for everyone to realize that if one area is lost to the food chain, all elements of the chain are negatively impacted. Humans are a part of this chain and will be impacted also. The bottom line of big corporations become less important when viewed in this way.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We need to understand how important the oceans are to this world and all the life that lived in them. Carelessness is leading us down a very sad path. That path needs to stop now!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
David Bailey

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dana Blizniak

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Karen Spradlin

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We must protect the sanctuary. If one falls, more will follow.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lucy Goodyear

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Diane Doesserich

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Silene Binkerd-Dale

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

It`s about time we have some respect for our oceans.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Bruce Morrison

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Last year we went on a whale watch in the area and had to travel well beyond the normal areas in order to find whales. This was such a change from previous excursions. It's quite sad to see how this environment has been negatively impacted.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ryan MacDonald

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
r brailly

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Every year our dead zones are getting bigger and more destructive due to all these factors on the west coast and all over the world...we are now in the act of establishing marine sanctuaries along the west coast of Oregon to restore and keep our rich diversity of marine habitat and life health and viable....since these dead zones are happening all over the world much is needed to be done to protect and restore these resources...once they are gone it may be impossible to get them back....the world will be a lonely and dreary place with only us in it and without a healthy ocean we won't survive long....we need to protect it immediately if not sooner...so please protect

this wonderful asset and keep it from becoming another "dead zone"!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
David Asselin

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Fred Fall

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nan Vollbracht

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Will we ever learn that OUR actions are destroying the Oceans, it's creatures, and our own future, or will we allow commercial interests to continue the destructive practices that have brought us to this dreadful situation?

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Wm. A./Janet M. Corkran

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Simona Fischer-Bixler

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Even if I have never visited the Stellwagen Bank National Marine Sanctuary, I heard that this sanctuary holds an extremely special place for so many ocean wildlife and that these creatures benefit a great deal from living in their natural home environment.

However, I continue to be extremely overwhelmed by harmful human-related activities that have already posed grave danger to the sanctuary and have already affected the lives of so many marine species.

I would like to add my VERY urgent message to let you know how extremely important NOAA's proposal is and that you should take it into serious consideration for the sake of the entire sanctuary and all the special sea creatures that reside in it. You are the only one that has the power to follow through with the proposal so that complete conservation can be made possible for the Stellwagen Bank National Marine Sanctuary at the present time, as well as throughout the years to come.

I would very much appreciate your taking my message, as well as that of many others, into serious consideration and your following through with the management plan so that the sanctuary can be restored and protected for many, many more years to come. Complete conservation of the Stellwagen Bank National Marine Sanctuary will make all the difference to the lives of so many precious ocean wildlife. I truly guarantee you this positive outcome once you take action and follow through with the entire conservation process. Many thanks for listening to many of us that truly care so much about the Stellwagen Bank National Marine Sanctuary.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Geoffrey Doman

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
LuCy J Boogaard

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Mignon Washington

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please act to protect this pristine ocean ecosystem from humankind's devastating actions. Thank you.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kristin Howard

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please, pay attention to the damage and pollution reaking havock on the wildlife!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Deborah Berk

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Steven Slagle %pa_first_name% Jane Spaeth

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Brent Rusert

I believe that we are at a crossroads in dealing with many areas of our planet. We live in a time when it is still possible to undo much of the damage we have caused and bequeath a recovering biosphere to future generations. If allowed to drift, it may soon be too late. Stellwagen Bank is one of many examples of why we must take action now.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please do what you can to protect this valuable natural area and all that live in it. Thank you.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kevin Filocamo

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Angela Smith

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Laura Ramirez

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

This is the right thing to do. We must take care of our resources and look at the long term impact our actions have on future generations. I am praying for you as you tackle this critical issue.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Matthews Thomas

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Ron Taylor

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Chandra Krout

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We are the stewards of our animal kingdom. If we let them down we let ourselves down. Please do all you can to protect our precious animals.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent MacDonald I know you have probably been receiving many of these letters, please realize that each one is sent by someone who would like to see their children live in a world with as much diversity as they were privileged to live in. Right whales are in an especiallyl bad situation with only about 200 left , and not all of them are old enough to reproduce. Plus many may not live that long because of the danger of injury from ships moving too quickly through their range.

We are only hurting ourselves in the long run for short term gains. It is crucial to maintain the balance of nature if people

are to be able to survive.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
kim thomas
