The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Charles Bradley

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Helen Hanna

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Michael Maslanek

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Rose Wedlund

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Sarah Di Bella

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

We ned to protect ourmmaritime environment for both animals and ourselves.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Cynthia Livingston

It really is necessary that we start taking serious care of the oceans on our planet. Any small step in that direction is welcome and can be a model for other areas. Why is it necessary to be nearly in crisis mode before we start taking positive steps to reverse the situation.

The Stellwagen Bank Management Plan is such a step.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
James Conway

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Stacey Kellenbeck

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Jehan Sinclair

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

I've probably gone whale watching a half dozen times in my life, each time to Stellwagen Bank and each time with my children or someone else. It's always been a marvelous experience for me and those who have gone with me. I'm deeply disturbed to learn this ecosystem is severely threatened and earnestly hope some effective measures can be employed to reduce these threats. Unfortunately I'm reasonably certain it wouldn't have happened on Bush's watch but we can hope for improvements in the future.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by

diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Angela Delp

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dominic Libby

So much of our natural world has been destroyed by man's selfish and self-centered behavior. Our current ecology is a reflection of the wanton disregard we've shown to the gifts given to us. I don't know if our planet will ever again resemble the Eden that it once was, but more people are becoming aware of the need for change. This management plan gives hope for the future--of marine life, of the beauty our world should have; and for the example it will set for our relationship with so many other land and water masses. Yes, please enact this management plan.

Let's achieve the vision of a Stellwagen Bank teeming with a

great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Donald Morris

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Until recently,when I moved to NC. I lived in Ma for 37 years and had the utter joy of whale watching on several occasions.leaving from Plymouth.This area MUST be preserved as a sanctuary for these wonderful animals.Once they have been forced out we can NEVER replace them.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Avril Lomas

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Gary Reitze

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Billie Gordon

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Joy Zadaca

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Michael Gelineau

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Louise Katz

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

One time . . . there was this fat lady at the beach . . . and my friend yelled out: "Whale on the beach!" She cried.
So, we all kicked his butt.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
David Klinke

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Deborah Smith

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Don't forget the whales. God created them to be an important part of the universe, also.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Joyce Raby

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nancy A. Bender

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Dear Suprintendent McDonald,

Please take all possible action within your authority to protect the endangered Stellwagen Bank from further damage from habitat damage from trawlling, draggers. ship ciollisions, depletiom and multifarious forms of pollution. We must all work to protect our vulnerable planet and ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
joel Thome

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
R R

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Alison Raby

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Previous efforts during the late 20th century demonstrated that we as a society can effectively and feasibly improve the quality of our waterways and marine habitats. It's time for us to do that again.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Gene Wedge

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Melanie Bober

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

I have been to the fishing towns new several of the ports in the usa. the fish beds are in need of help.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

If we don't protect our water soon we won't have any fish and eventually no clean water.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Pat Pascual

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
joan Mueller

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Louise Thompson

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Living in Massachusetts, I know what a marveloius treasure trove Stellwagen Banks is. We should do everything we can to preserve this wonderful place.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Hannah Banks

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Kelsey Miner

I have been whale watching in the Stellwagen Bank for many years.

I have been incredibly fortunate to have seen 11 species of cetaceans in the wild, including the rarest of the large whales, the North Atlantic Right Whale.

I assure you that these animals are beautiful, intelligent, and curious creatures. They are worthy of moral consideration in their own right.

Further, future generations of humans deserve the same opportunity I have had to see these incredible animals for themselves.

Please do everything in your power to protect the Stellwagen Bank and the Right Whale for future generations.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Melissa Miller

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Eugene Gorrin

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Rev. Major John Hanscom

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Arthur Kaltenborn

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Brian Robinson

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Nikki Van Fossen

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Beverlee Goynes

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
P Martinson

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Louis DiMento

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please protect marine life and take action to begin protecting and restoring a valuable ocean sanctuary.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Christine Dildine

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lane Hoy

Govenor Patrick has signed a bill that will help by beginning to stop "Dumping" of waste water from private boats and has decreased the use of the outflow pipe. These are good steps, but just that, a beginning. We really need to wake up on all fronts concerning the Land, Water, Ocean, and the Air quality of our planet. The time is NOW!

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Sandra Green

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Peter Bedard

Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Dennis Morley

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Julie Funke

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Tiffany Berry

Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Fred Mathes

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Debbie Friesen

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

The health and diversity of life in our oceans should take precedence over mere commercial human concerns. I find it astounding that more people still don't get that human well-being is tied to the well-being of all other life on the planet. They'd better get it, and fast.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Lora Jetzer

We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

This is obvioulsy an area we need to protect because it is already a National Marine Sanctuary.

We currently have a very bad issue that needs to be addressed. All over our planet earth people/businesses/governments and others have seem to forgotten that the Earth is a planet that requires a good amount of balance to exist. Our ecosystem is getting worse all the time because people are changing the system by killing off animals that are part of the system. If there were in fact too many of one species of animal the ecosystem would eventually balance the system to bring it back

to par. The issue is that man is treating Earth badly and eventually (if we are not already) will suffer for this injustice we are doing to our home planet.

When these issue are addressed to your office, keep in mind that your grandchildren and their children deserve to have the opportunity to see the Earth as we do, with all of the different species of animals and plants. So when you do vote remember to vote for your heirs and allow animals/plants and the environment to be protected from mans current injustice to the planet Earth.

Thank you,

Joseph Butler.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Joseph Butler

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
Terrence Ward

It is so important to the delicate life cycle on this planet to get this one area under control. In so doing, this will spur others to do more in other areas and as the effort grows, we are renewing and savings more and more of our oceans, wild places, environment, and the world as a whole. It's so important. We only have one earth and we still have a chance to fix the wrongs we have done.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
D Cooper

Superintendent Craig MacDonald

Dear Superintendent MacDonald,

The Gerry E. Studds Stellwagen Bank National Marine Sanctuary has a marvelous diversity of marine life, including whales, sea turtles, fish, birds and cold water coral. The Stellwagen Bank Management Plan is a needed first step toward protecting and restoring this ecologically important area.

Located across the threshold to Boston Harbor where Massachusetts Bay meets the Gulf of Maine, Stellwagen Bank is under assault from multiple fronts: habitat damage from trawling and draggers, ship collisions and depletion of fish. Pollution comes in many forms to Stellwagen. Nutrient loading from rivers and shores can cause algal and red tide blooms. Most insidious are long-lived metals, endocrine-disrupting chemicals, pesticides, and petrochemicals that bio-accumulate in animals and bio-magnify up the food pyramid. Invasive species displace indigenous animals.

Global warming is weakening all of Stellwagen's marine life by increasing the acidity of sea water. Animals and plants that spend a portion of their lives drifting in the plankton suffer most from acidification, followed by all who depend on them for food.

It is time for a comprehensive Stellwagen Bank Management Plan. I am writing in support of NOAA's efforts to bring this about. We must improve Stellwagen's resource conditions and the quality of lives. The plan must produce open and honest dialogue with all interest groups, informed by sciences, to lay the foundation for restoring and protecting Stellwagen's ecosystem.

Please support the Stellwagen Bank Management Plan, it is a vital step in a sensible approach to restoring this important area.

Let's achieve the vision of a Stellwagen Bank teeming with a great diversity and abundance of marine life, supported by diverse, healthy habitats in clean ocean waters.

Sincerely,
jRegina Carpenter
