I was hoping the final rule could be more specific on how to calculate de minimus on foreign origin goods which contain both US origin 6xxxx code items (subject to the 1% threshold) AND other controlled content (subject to the usual non-embargoed country 25% threshold). Do you still do ONE calculation and use the lower threshold? Or is BIS proposing 2 separate calculations...one for 6xxxx content and one for other controlled content?

(sorry – this isn't much of comment...I meant to get it in for 1 of the weekly calls but missed the boat)
