Subject: O&G Docket No. 20-0290951

We are commenting about above Doc No. 20-0290951.

Proposed changes (C) & (D) should be combined so that all requirements are included in one amendment. All requirements proposed should be included with the initial Injection well permit filing.

We feel that in some area's that might be proposed for this type of drilling activity, the area may have never experienced any seismic activity in the past. These would be considered to be new wells in virgin territory. Any fluid injection in this area could be the first time the substrate has been subject to the pressures of the proposed wells. Just because an area has had no prior earthquake activity does not mean that it won't occur when the well is put into operation.

If you leave the proposed amendments as is, we feel strongly that the wording should be changed in paragraph (C). In the first sentence take out the word **shall** and substitute the word **will**.

In paragraph (D) sentence one, take out the word **may** and substitute the word **will**. Also, in sentence two the word **may** should be substituted with the word **will**.

By substituting the word changes that we have proposed, we feel that this would make the proposed amendment stronger and would **require** that the applicants provide all necessary research for a safer drilling environment.

Thanks for all your efforts and patience in this difficult process.
