

To get Cleaner Air in DFW Which of these needs Better Pollution Controls?

Cars: **90%** pollution control

Old Coal Plants **50%**

Cement Kilns **40%**

Gas Facilities **0%**

Tell the State: Get as Tough on *Industry* as you've been on my *Car*
at the First Meeting on DFW Smog in Four Years

Texas Commission on Environmental Quality
Public Meeting
on a New DFW Clean Air Plan
Thursday, June 24th
7 to 9 pm
Arlington City Council Chambers
101 West Abram

What is this meeting about?

Last summer DFW violated the old federal smog standard despite a state clean air plan to prevent that. That made us the region with Texas' dirtiest air.

Now the state must write a second air plan. The kick-off for this "Do-Over" plan is the June 24th. meeting, where the TCEQ says it's seeking opinions about what anti-pollution measures to include this time. We urge you to give them yours.

What should a new clean air plan do?

- 1) Adopt all the recommendations from the 2006 local clean air committee that were dumped by the state four years ago.
- 2) Crackdown on industry as much as my car. Demand 90% controls on coal, kilns, and gas.
- 3) Do more than the minimum. No more paper exercises. Go further than required.
- 4) Aim the plan where smog pollution is worst: Tarrant, Denton, Wise, and Parker Counties.
