## **Drilling Productivity Report**

For key tight oil and shale gas regions

The seven regions analyzed in this report accounted for 95% of domestic oil production growth and all domestic natural gas production growth during 2011-13.

#### **Contents**

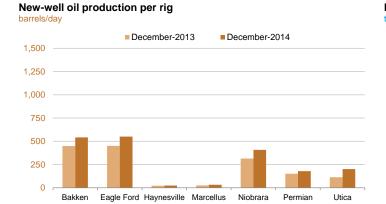

Year-over-year summary	2
Bakken Region	3
Eagle Ford Region	4
Haynesville Region	5
Marcellus Region	6
Niobrara Region	7
Permian Region	8
Utica Region	9
Explanatory notes	10
Sources	11

## Year-over-year summary

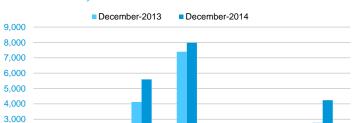

November 2014

drilling data through October projected production through December

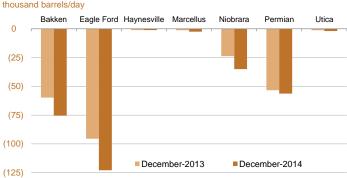

### **Drilling Productivity Report**

#### New-well gas production per rig

#### Legacy oil production change

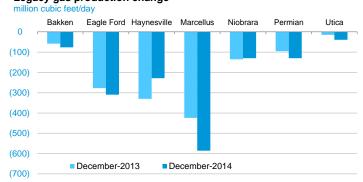

#### Legacy gas production change

Eagle Ford Haynesville

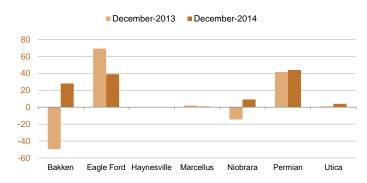

2.000

1,000

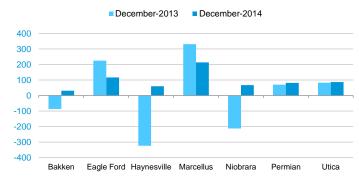

#### Indicated monthly change in oil production (Dec vs. Nov)

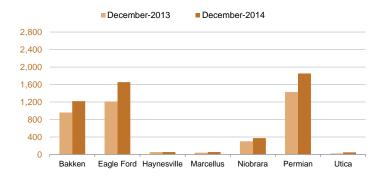

#### Indicated monthly change in gas production (Dec vs. Nov)

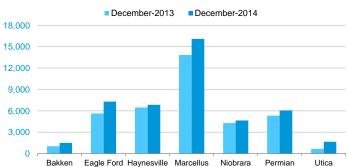

#### Oil production

#### thousand barrels/day

#### Natural gas production

million cubic feet/day

November 2014

drilling data through October projected production through December

Drilling Productivity Report

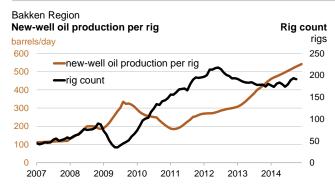

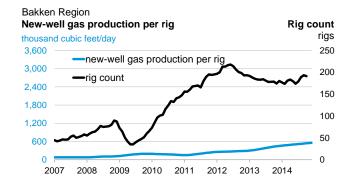

543 December536 November

Monthly additions from one average rig

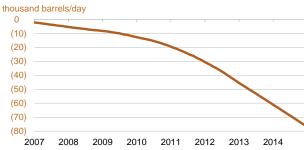

December 559
November 550
thousand cubic feet/day

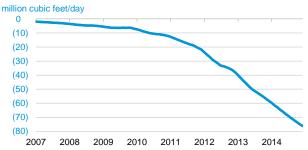

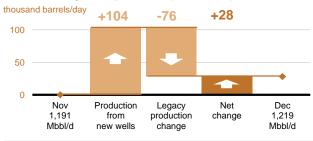

#### Bakken Region Legacy oil production change

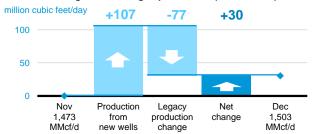

#### Bakken Region Legacy gas production change

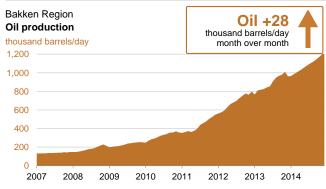

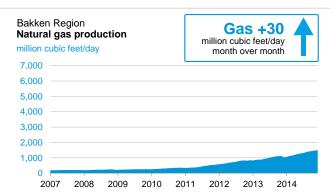

## Bakken Region Indicated change in oil production (Dec vs. Nov)

## Bakken Region Indicated change in natural gas production (Dec vs. Nov)

# Eagle Ford Region Drilling Productivity Report

November 2014

drilling data through October projected production through December

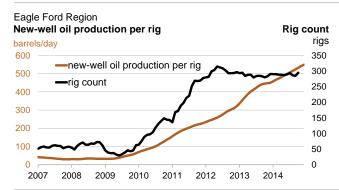

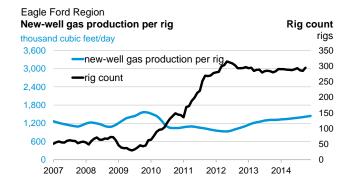

December November

Monthly additions from one average rig

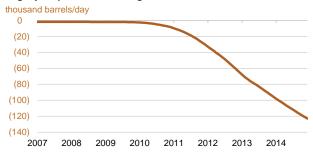

1,444 December November thousand cubic feet/day

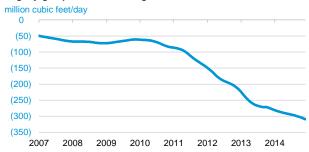

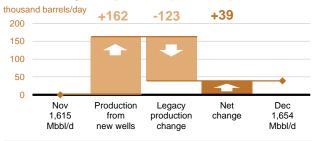

#### Eagle Ford Region Legacy oil production change

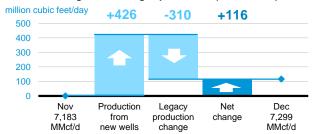

#### Eagle Ford Region Legacy gas production change

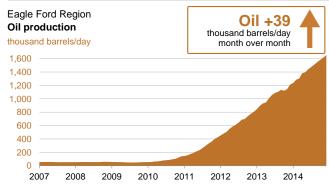

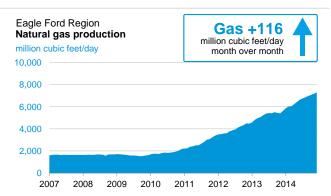

#### Eagle Ford Region Indicated change in oil production (Dec vs. Nov)

#### Eagle Ford Region Indicated change in natural gas production (Dec vs. Nov)

## eia Haynesville Region

**Drilling Productivity Report** 

November 2014

drilling data through October projected production through December

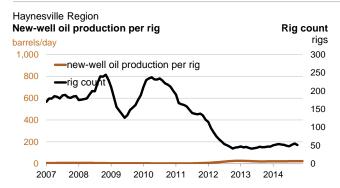

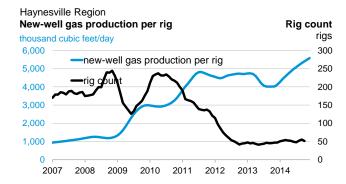

December November barrels/day

Monthly additions from one average rig

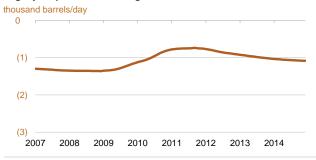

5,592 December 5,500 November thousand cubic feet/day

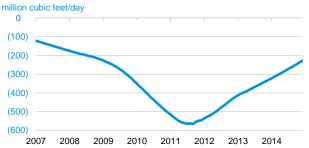

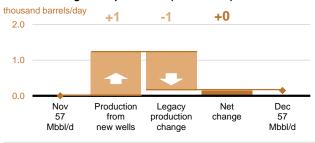

#### Haynesville Region Legacy oil production change

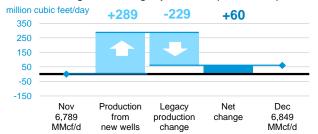

#### Haynesville Region Legacy gas production change

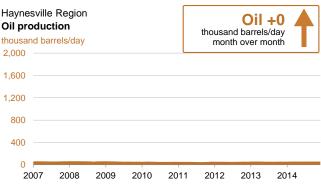

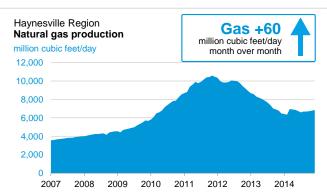

#### Haynesville Region Indicated change in oil production (Dec vs. Nov)

#### Haynesville Region Indicated change in natural gas production (Dec vs. Nov)

## Marcellus Region

**Drilling Productivity Report** 

November 2014

drilling data through October projected production through December

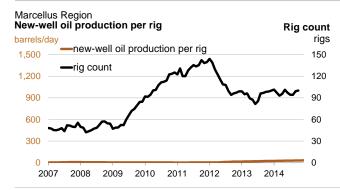

33 December 32 November barrels/day

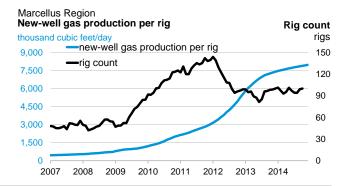

Monthly additions from one average rig

December 7,976

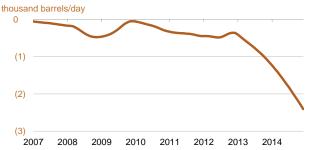

November 7,938
thousand cubic feet/day

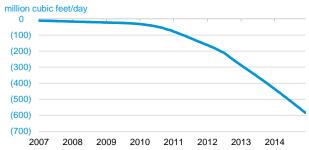

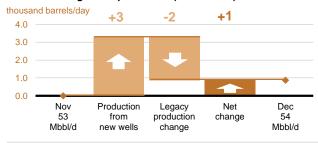

#### Marcellus Region Legacy oil production change

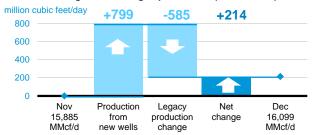

#### Marcellus Region Legacy gas production change

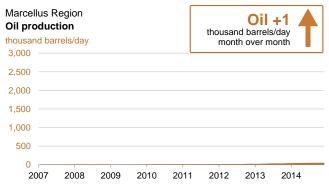

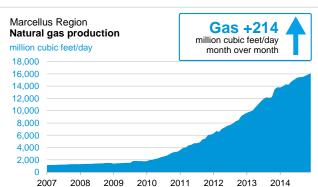

## Marcellus Region Indicated change in oil production (Dec vs. Nov)

## Marcellus Region Indicated change in natural gas production (Dec vs. Nov)

November 2014

drilling data through October projected production through December

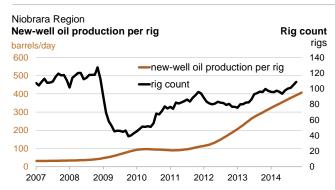

407 December 400 November Monthly additions from one average rig

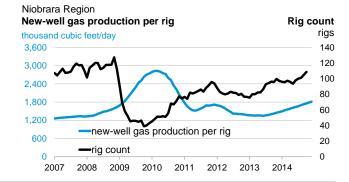

December 1,815

November 1,786

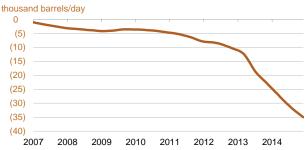

thousand cubic feet/day

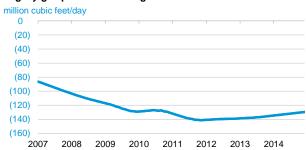

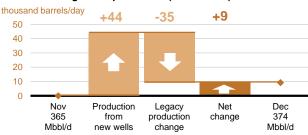

#### Niobrara Region Legacy oil production change

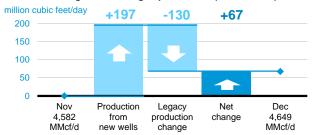

#### Niobrara Region Legacy gas production change

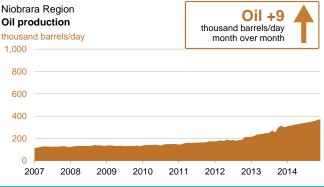

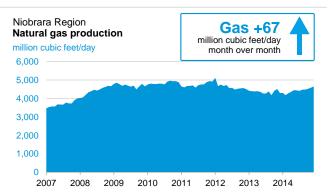

## Niobrara Region Indicated change in oil production (Dec vs. Nov)

## Niobrara Region Indicated change in natural gas production (Dec vs. Nov)

**Drilling Productivity Report** 

November 2014

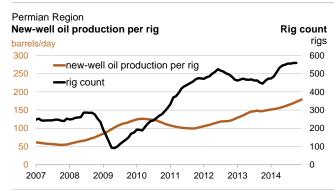

drilling data through October projected production through December

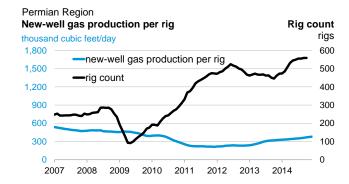

179 December 176 November Monthly additions from one average rig

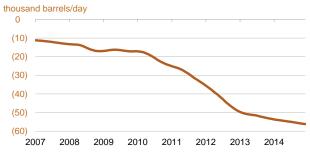

December 380
November 374
thousand cubic feet/day

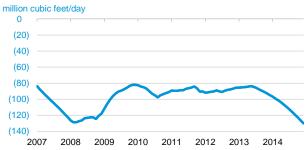

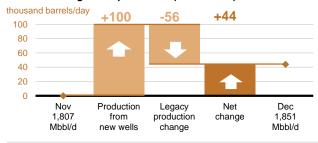

#### Permian Region Legacy oil production change

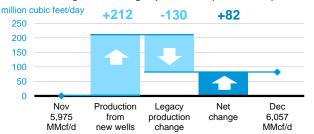

#### Permian Region Legacy gas production change

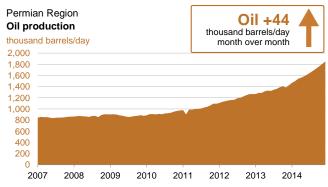

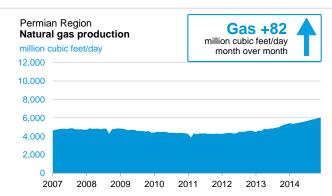

## Permian Region Indicated change in oil production (Dec vs. Nov)

## Permian Region Indicated change in natural gas production (Dec vs. Nov)

drilling data through October projected production through December

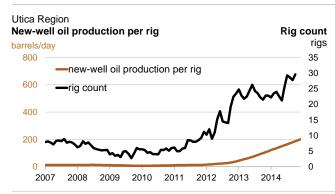

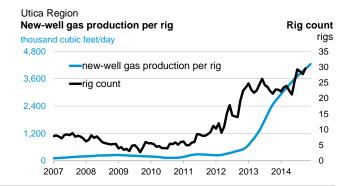

201 December 194 November barrels/day Monthly additions from one average rig

December 4,246

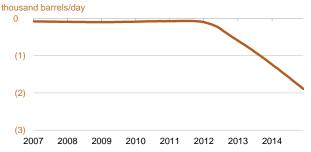

November 4,148
thousand cubic feet/day

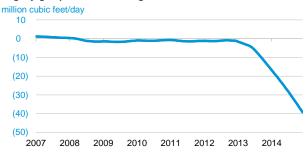

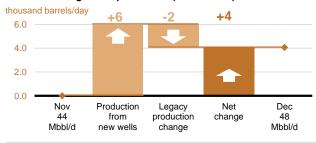

#### Utica Region Legacy oil production change

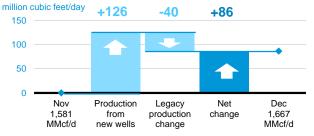

#### Utica Region Legacy gas production change

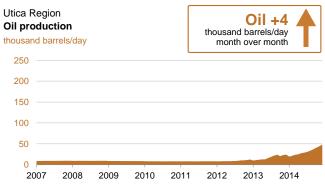

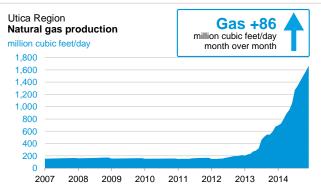

## Utica Region Indicated change in oil production (Dec vs. Nov)

## Utica Region Indicated change in natural gas production (Dec vs. Nov)

The Drilling Productivity Report uses recent data on the total number of drilling rigs in operation along with estimates of drilling productivity and estimated changes in production from existing oil and natural gas wells to provide estimated changes in oil<sup>1</sup> and natural gas<sup>2</sup> production for seven key regions. EIA's approach does not distinguish between oil-directed rigs and gas-directed rigs because once a well is completed it may produce both oil and gas; more than half of the wells do that.

#### Monthly additions from one average rig

Monthly additions from one average rig represent EIA's estimate of an average rig's<sup>3</sup> contribution to production of oil and natural gas from new wells.<sup>4</sup> The estimation of new-well production per rig uses several months of recent historical data on total production from new wells for each field divided by the region's monthly rig count, lagged by two months.<sup>5</sup> Current- and next-month values are listed on the top header. The month-over-month change is listed alongside, with +/- signs and color-coded arrows to highlight the growth or decline in oil (brown) or natural gas (blue).

#### New-well oil/gas production per rig

Charts present historical estimated monthly additions from one average rig coupled with the number of total drilling rigs as reported by Baker Hughes.

#### Legacy oil and natural gas production change

Charts present EIA's estimates of total oil and gas production changes from all the wells other than the new wells. The trend is dominated by the well depletion rates, but other circumstances can influence the direction of the change. For example, well freeze-offs or hurricanes can cause production to significantly decline in any given month, resulting in a production increase the next month when production simply returns to normal levels.

#### Projected change in monthly oil/gas production

Charts present the combined effects of new-well production and changes to legacy production. Total new-well production is offset by the anticipated change in legacy production to derive the net change in production. The estimated change in production does not reflect external circumstances that can affect the actual rates, such as infrastructure constraints, bad weather, or shut-ins based on environmental or economic issues.

#### Oil/gas production

Charts present all oil and natural gas production from both new and legacy wells since 2007. This production is based on all wells reported to the state oil and gas agencies. Where state data are not immediately available, EIA estimates the production based on estimated changes in new-well oil/gas production and the corresponding legacy change.

#### Footnotes:

- 1. Oil production represents both crude and condensate production from all formations in the region. Production is not limited to tight formations. The regions are defined by all selected counties, which include areas outside of tight oil formations.
- 2. Gas production represents gross (before processing) gas production from all formations in the region. Production is not limited to shale formations. The regions are defined by all selected counties, which include areas outside of shale formations.
- 3. The monthly average rig count used in this report is calculated from weekly data on total oil and gas rigs reported by Baker Hughes.
- 4. A new well is defined as one that began producing for the first time in the previous month. Each well belongs to the new-well category for only one month. Reworked and recompleted wells are excluded from the calculation.
- 5. Rig count data lag production data because EIA has observed that the best predictor of the number of new wells beginning production in a given month is the count of rigs in operation two months earlier.

The data used in the preparation of this report come from the following sources. EIA is solely responsible for the analysis, calculations, and conclusions.

**Drilling Info** (http://www.drillinginfo.com) Source of production, permit, and spud data for counties associated with this report. Source of real-time rig location to estimate new wells spudded and completed throughout the United States.

Baker Hughes (http://www.bakerhughes.com) Source of rig and well counts by county, state, and basin.

**North Dakota Oil and Gas Division** (https://www.dmr.nd.gov/oilgas) Source of well production, permit, and completion data in the counties associated with this report in North Dakota

Railroad Commission of Texas (http://www.rrc.state.tx.us) Source of well production, permit, and completion data in the counties associated with this report in Texas

#### **Pennsylvania Department of Environmental Protection**

(https://www.paoilandgasreporting.state.pa.us/publicreports/Modules/Welcome/Welcome.aspx) Source of well production, permit, and completion data in the counties associated with this report in Pennsylvania

West Virginia Department of Environmental Protection (http://www.dep.wv.gov/oil-and-gas/Pages/default.aspx) Source of well production, permit, and completion data in the counties associated with this report in West Virginia
