OSS Division: Mission

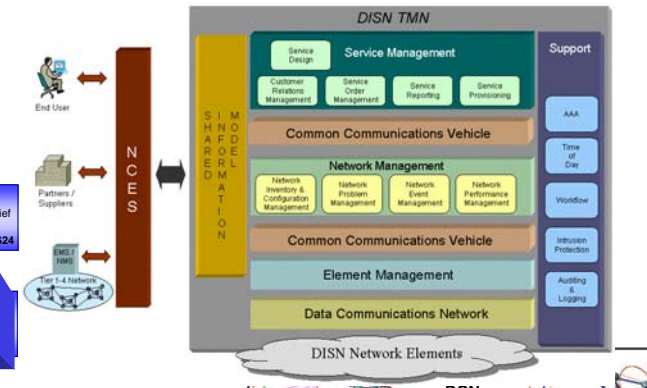

Mission

Operational Support Systems Division – Provides systems engineering and integration, planning, resourcing, fielding, sustaining and evolving secure solutions to instrument and automate the service fulfillment and assurance functions for the DISN using Net-Centric principles and technologies. The DISN OSS will share its data assets for information superiority to the Commander-in-Chief, Combatant Commanders, DoD, DISA, Services, Agencies and the Warfighter.

Operational Support Systems (OSS) Division

MAJOR PROJECTS

- DISN OSS Consolidation
- Service-Oriented Integration
- Integrated DISN CMDB
- OSS consolidation at DECC
- TNC-CENT Deployment
- OSS Central
- Ford Island Transition
- DCN Optimization/Classified DCN
- Performance Mgmt Consolidation
- Global INMS and TMS
- WWOLS Transformation
- DISN OSS info sharing services

FUNCTIONS/CONTRIBUTIONS

- Net Mgmt Tier III and Ops Support
- Data Communications Network
- Element Management Systems
- Network Management Systems
- Service Management Systems
- Common information Model for NetOps
- Integrated Situational Awareness
- Circuit ordering and tracking for DISA, DoD and Non-DOD requirements
- DISN Database of Record for Contractual and Financial circuit data
- Support ordering of Presidential and other high interest circuits
- DISN Network Operations Consolidated Task Order

Unclassified

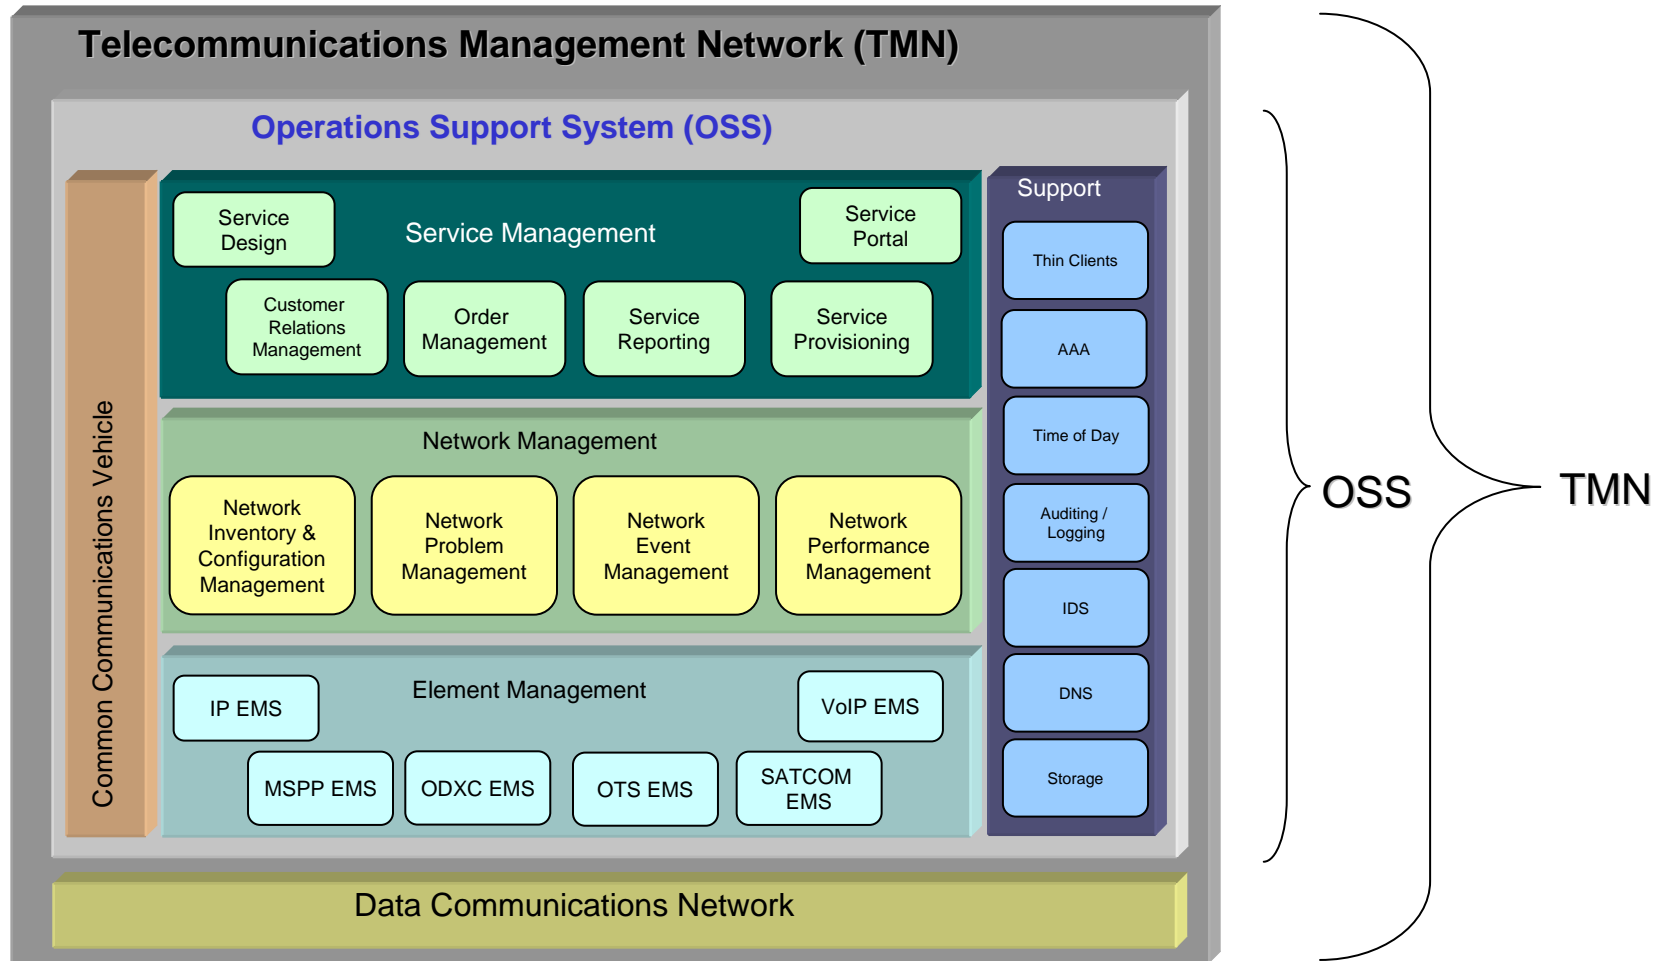

What is a TMN?

According to ITU-T M.3010, a Telecommunications Management Network is defined as ...

- **All the systems that provide management functions**
 - Alarm mgmt, Inventory mgmt, Order mgmt, Provisioning, etc.
- **The connectivity between the management functions and the managed elements**
- **The connectivity between management functions**
- **Major components of the ITU-T TMN include**
 - Operations Support System
 - Data Communications Network
 - Workstation

DISN TMN Reference Model

DISN Network Elements

“Increases and Facilitates Integration Efficiencies”

DISN TMN Systems

- Operations Support Systems
 - **Service Management System**
 - Order Mgmt, CRM, Service Design, Service Provisioning
 - DDOE, PAWS, WWOLS-R, WMS
 - **Network Management System**
 - Event Mgmt, Report Mgmt, Trouble Mgmt, Inventory Mgmt
 - INMS, TMS, ICATS, RMS
 - **Element Management System**
 - IP (IBM NetCool, InfoVista, ArcSight NCM/NRM, Concord NetHealth, Packet Design), OTS, ODXC, MSPP, AMS, Future
 - **Support System**
 - Common Communications Vehicle (CCV)
 - AAA , IDS / IPS, DNS, Time of Day,
 - OSS Portal
 - **Storage Network**
- Data Communications Network
 - **Local Area Network**
 - **Wide Area Network**

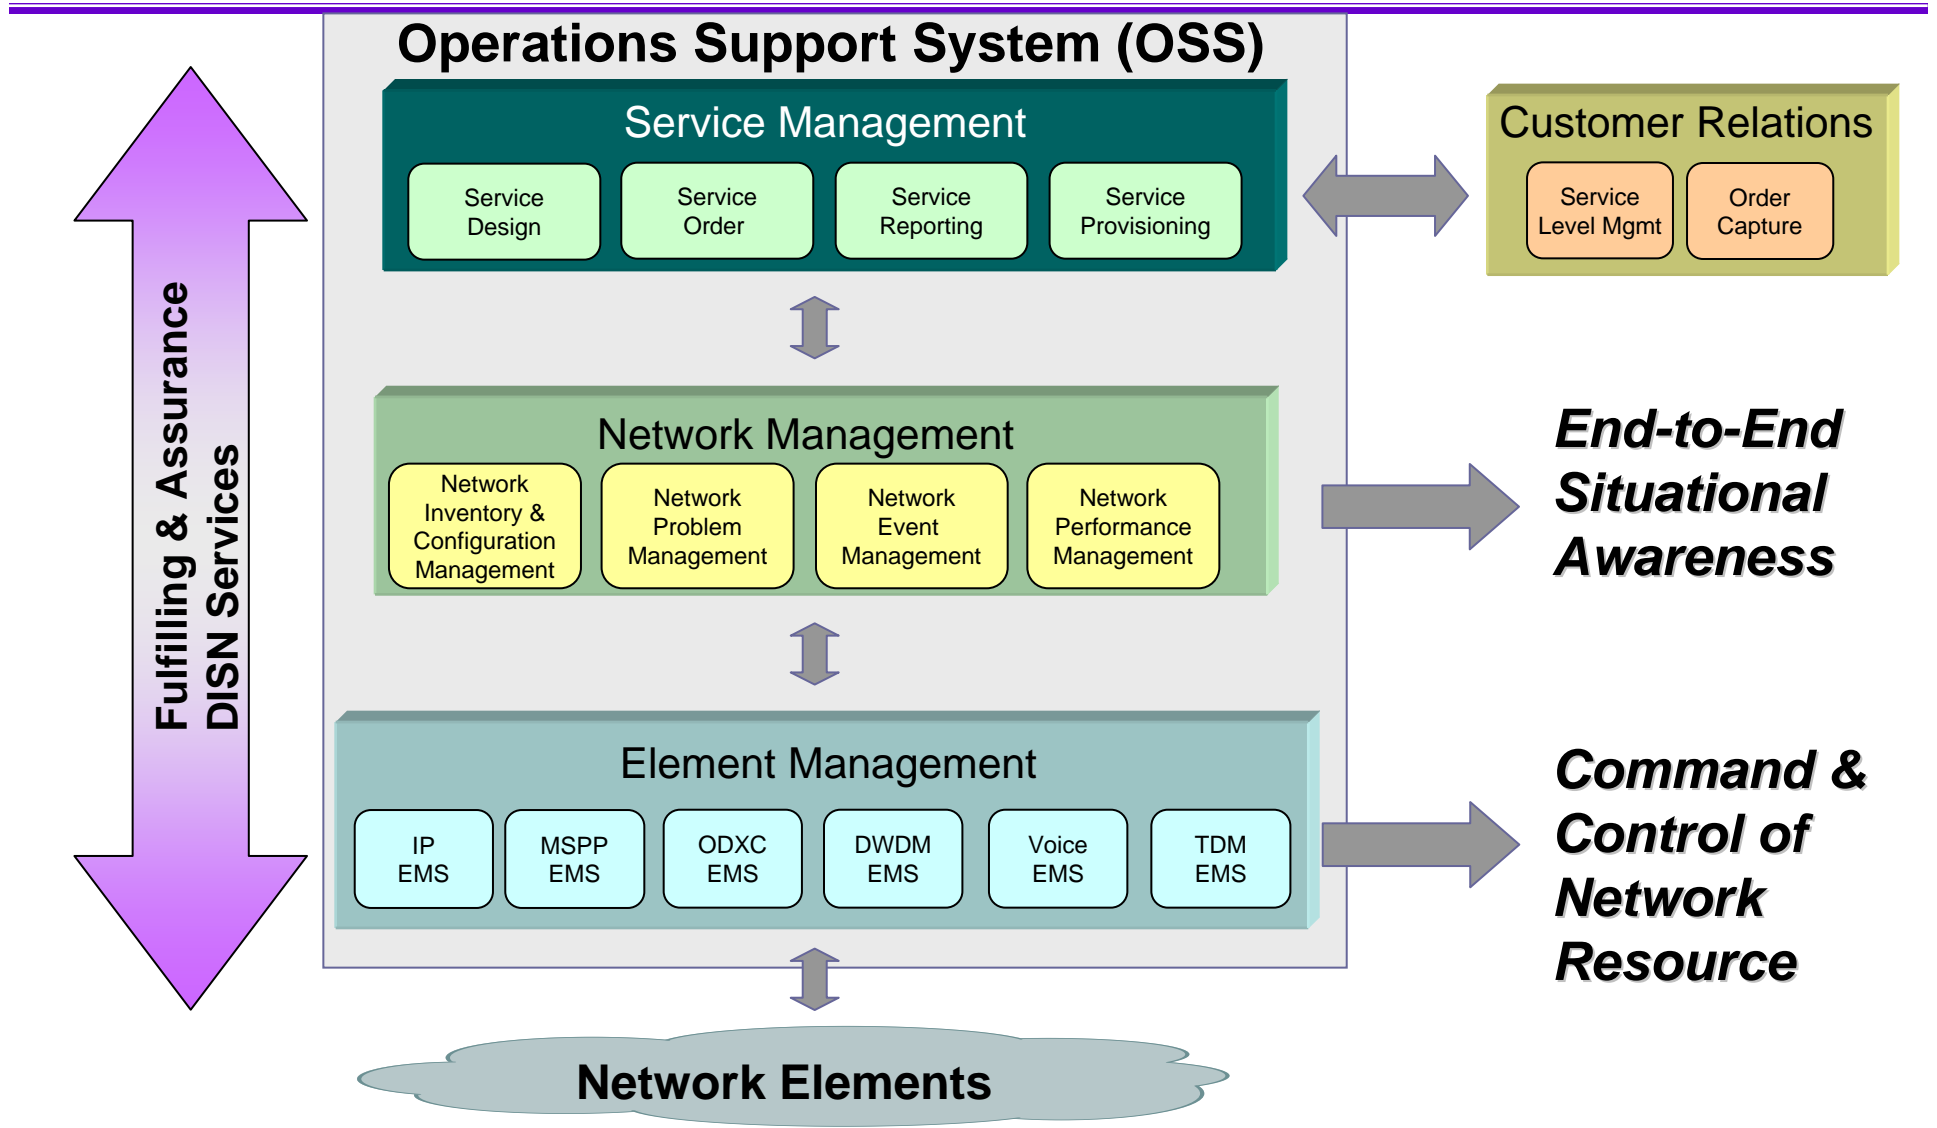

DISN OSS BLUF

- **The DISN Operations Support System (OSS) is the collection of systems that perform:**
 - Management
 - Inventory
 - Engineering and Planning
 - Repair functions
- **Key OSS Elements**
 - Processes
 - The sequence of events
 - Data
 - The information that is acted upon
 - Applications
 - The components that implement processes to manage data
 - Technology
 - How we implement the applications

“Efficient Delivery and Operations of DISN Services”

OSS Support Functions

“Functionally Focused Capabilities”

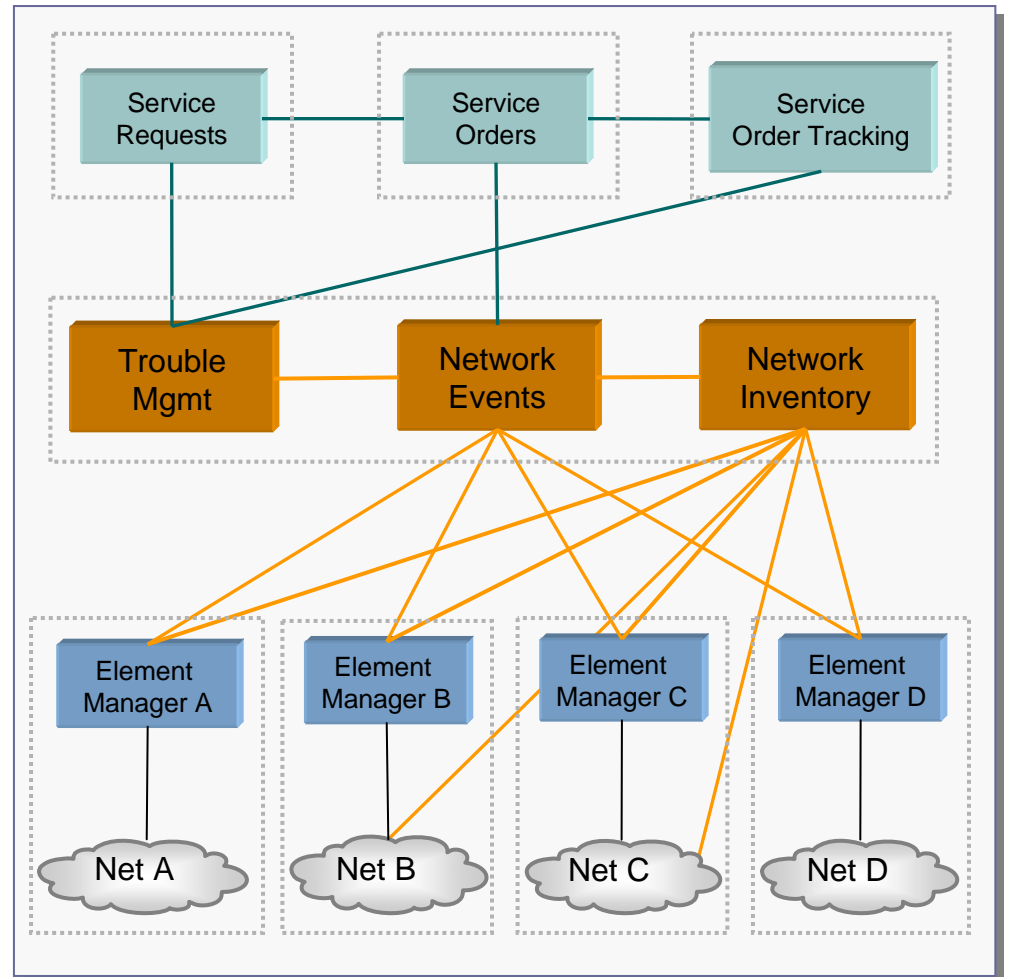

DISN OSS Goals

- Single OSS with interoperable COTS components working in concert to allow for
 - Dynamic, on-demand provisioning & activation of voice, video, and data services
 - End-to-end visualization of DISN
 - Integrated, real-time situational awareness of the DISN
- Interoperable and interchangeable OSS components using one data interface per application
- Service Oriented Integration environment where data interfaces are published, self-describing, and reusable
- Common, shared information exchange schema for application integration

“Transformation to a Data-centric environment”

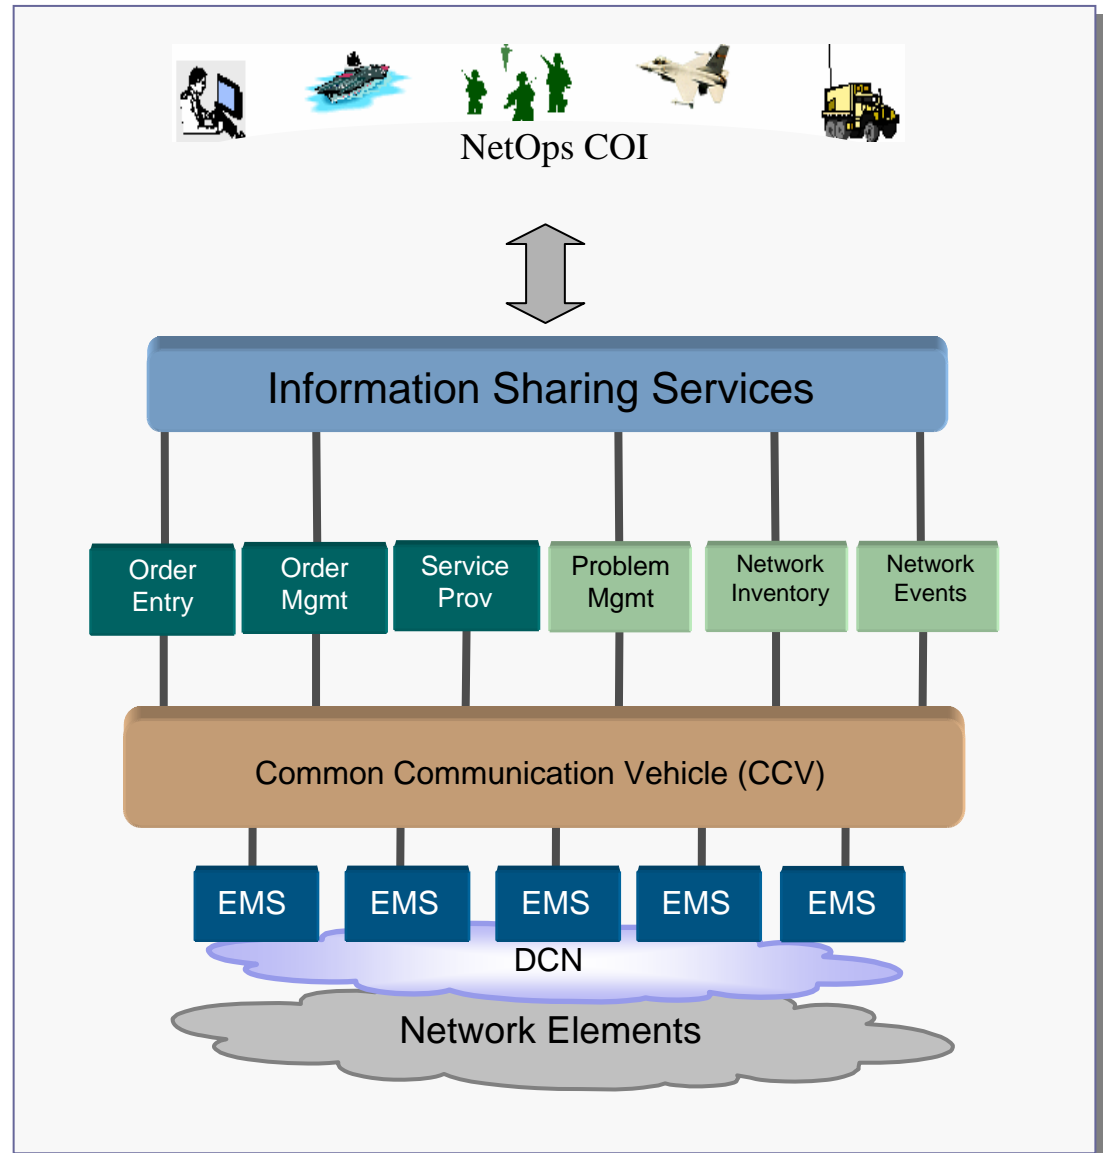

The Problem

- Disparate OSS components
 - Silo applications
 - Tightly coupled interfaces
- No common information sharing model
 - Too many native vocabularies
 - High integration costs
- “Tool-centric”
- Difficult to correlate relationship between alarm, inventory, and customer / mission
- No common architecture
 - Low scalability
 - Limited flexibility
- Problem becomes more acute as OSS grows

The Solution

- Consolidated OSS architecture
 - No Silos
- Loosely-coupled integration
 - Better flexibility and scalability
- “Data-centric”
- Common services for sharing
 - Single point of access
 - Net-Centric

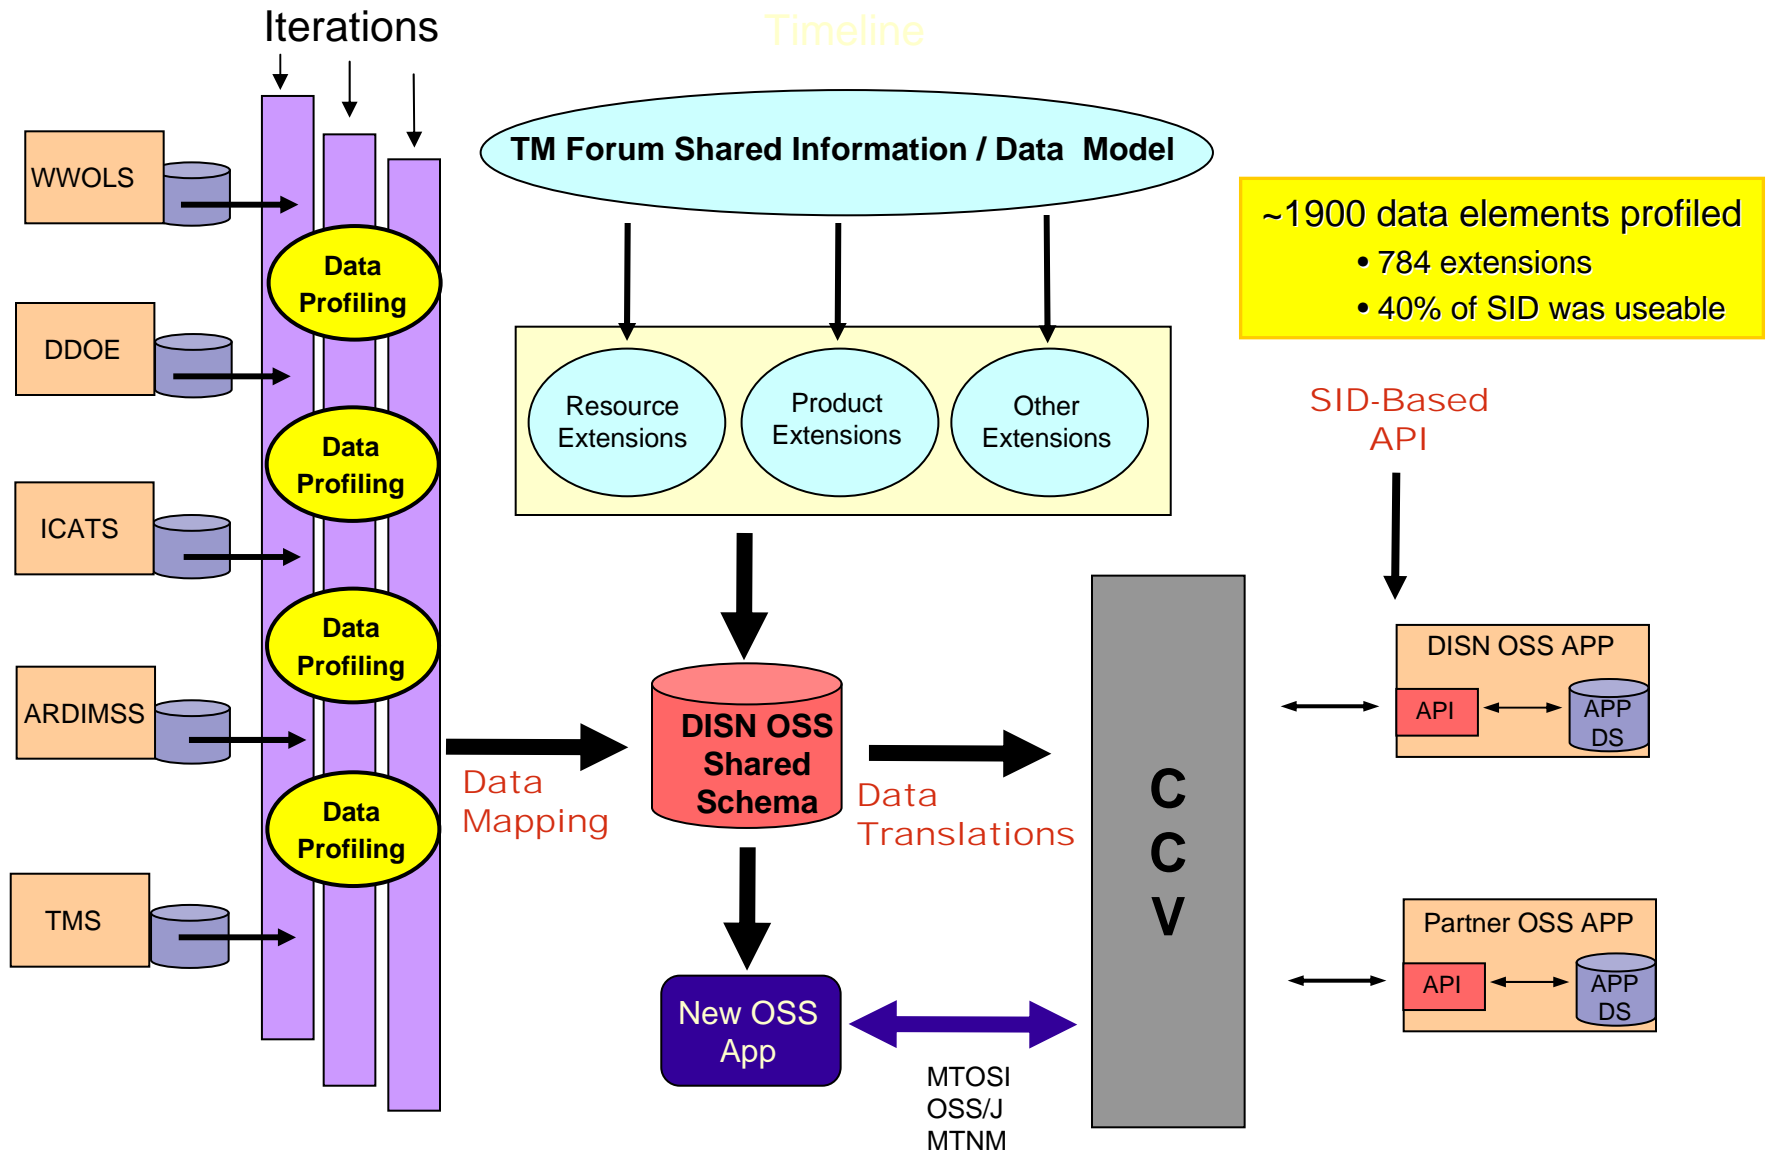

DISA DISN OSS Architecture Strategy

- Define a common NetOps information exchange schema
 - To share information internally and externally
- Deploy common industry standards-based integration technology
 - One integration interface per system
- **“ADOPT”** industry standards and models as baselines to minimize research & development
 - TeleManagement Forum (www.tmforum.org)
 - Shared Information / Data (SID) model
 - Multi-Technology Network Management (MTNM)
 - Multi-Technology Operations System Interface (MTOSI)
 - OSS through Java (OSS/J)
- Deploy interoperable & interchangeable COTS solutions
- Implement a service-oriented integration environment

“Service-oriented Integration for Composable NetOps Data”

Information Sharing Model Methodology

DISA DISN OSS Integration Architecture

- Very Scalable*
- Low integration overhead*
- Very flexible*
- No vendor lock-in*
- Adaptable to business changes*

OSS User Benefits

- Many data calls currently requested by Service Managers and customers can be retrieved directly via the DISN OSS Web Services
- Standard information exchange schema between applications will minimize the amount of data re-entry and maximize reuse
- Higher levels of application integration through standard interfaces will help streamline the provisioning and troubleshooting processes
- Slight paradigm shift as operators adjust to data and function-centric capabilities rather than tool specific
- Strict adherence to standards is mandatory, resulting in improved CM processes for the DISN

DISA DISN Inventory & Alarms Published

The screenshot shows a Microsoft Internet Explorer browser window displaying the DoD Metadata Registry v7.0 search results. The address bar shows the URL <https://metadata.dod.mil/mdr/results.htm>. The page header includes the DoD logo, the text "DoD METADATA REGISTRY v7.0 AND CLEARINGHOUSE", and the tagline "the authoritative source for structural metadata". A search bar is visible with "All Data" selected and "Advanced Search" button. The search results are under the heading "Search Results" and show "Search Criteria: Information Resource Types: Submission Package, Governance Namespaces: NetOps". Below this, there are several search results listed, each with a checkbox, a title, and a description. The result "DISN Inventory and Alarms (Submission Package, v1.0, Developmental, 05/02/2008)" is selected with a checked checkbox and is circled in red. Other results include "DISN OSS Data Model", "NetD Data Model", "Computer Network Defense Data Exchange Standard for Net Ops", "CND-CORE", and "DISN getInventory Interface". The page also features a navigation menu on the left with links like Home, About, View, Add, My Pages, Reports, COI Directory, Documents, and Help. A large "MDR" logo is visible in the bottom left corner of the page content.

DISN OSS Information Sharing

“Increases and Facilitates Integration Efficiencies”

DISN OSS Information Sharing

- Information sharing will be through Web Services leveraging industry-specified specifications to minimize research & development efforts
 - The TMF Multi-Technology Operations System Interface (MTOSI)
 - Alarm, performance, and inventory (physical / logical) information
 - The TMF OSS through Java (OSS/J)
 - Trouble tickets
 - Service order information
- All DISN OSS services published on NCES UDDI and DoD Metadata Registries
- All DISN OSS data assets are or will be visible
 - DDMS tags already incorporated in published data
 - DDMS tags embedded in static content in new DISN OSS Portal
 - DISN OSS Central embraces Web 2.0 paradigm for sharing information

“End-to-End Solution Using Industry Standards ”

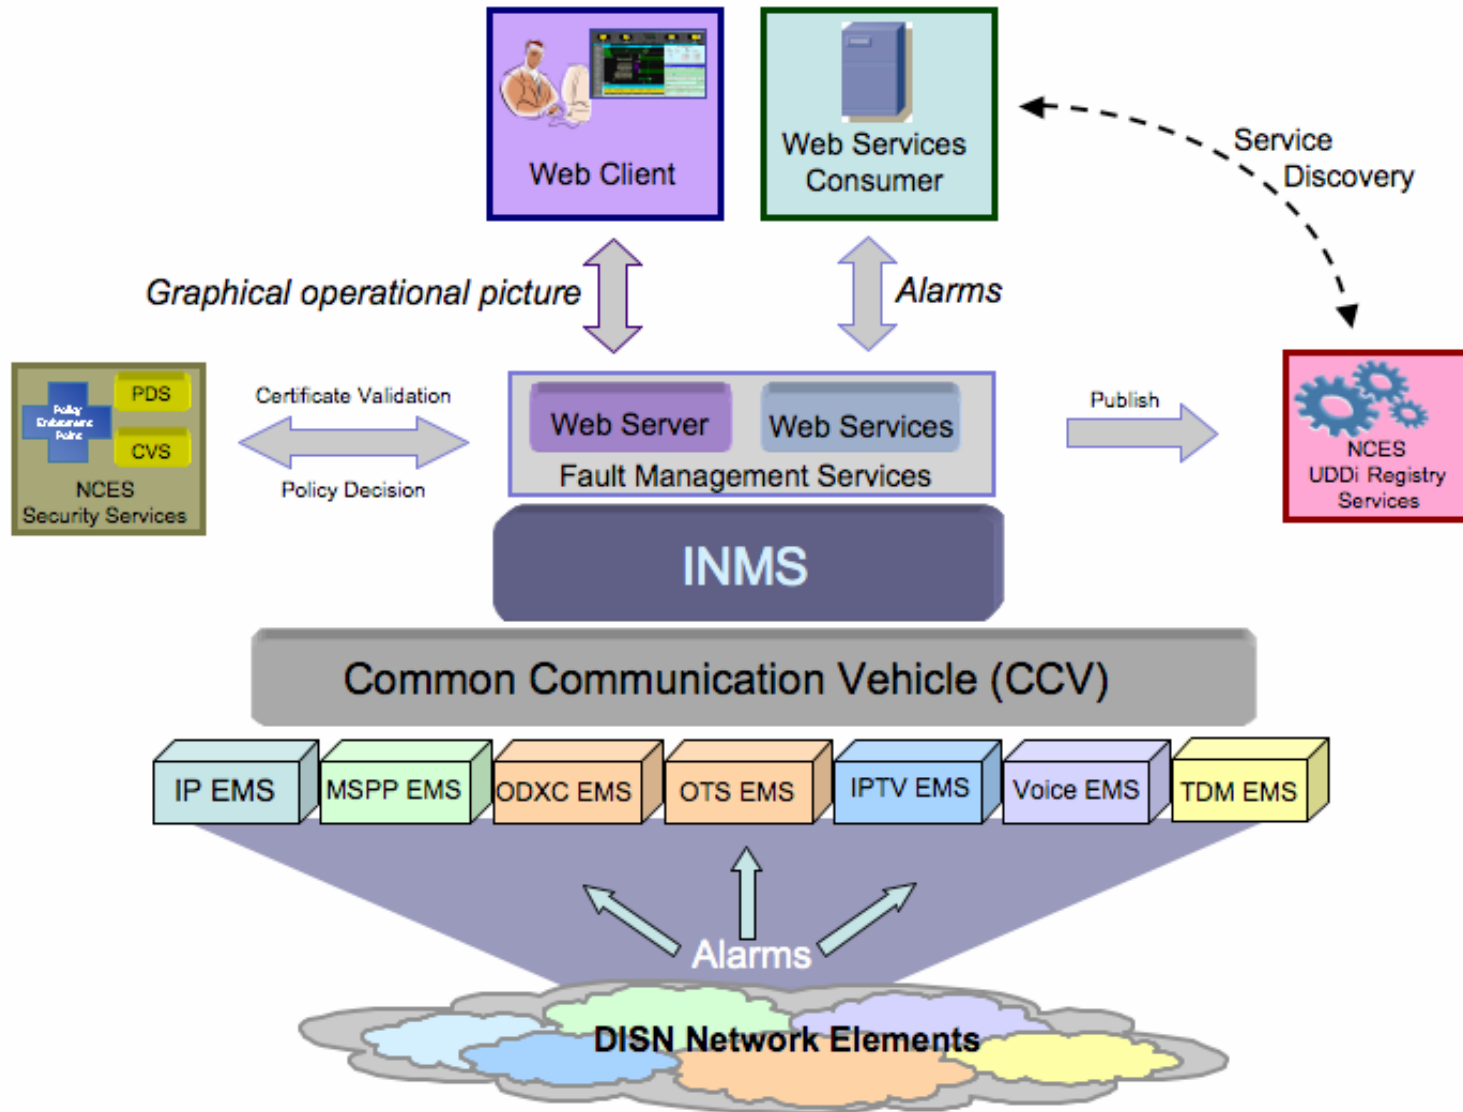

Information Services Timeline

- Alarm Service – April 2008 – CENTCOM AOR
 - Completed mapping from legacy to information sharing alarm service
 - Assisting IBM with client interface for CENTCOM
- Inventory
 - Available today for DISN core network resources
 - Enhanced with router configuration details for CENTCOM (May 2008)
 - All DISN network resources available May 2009
- GIG Standard Ticket (GST) Reportable Ticket
 - Available today for NetOps COI to share reportable events
 - Need to finalize end-to-end process before implementing bi-directional sharing of trouble tickets within the NetOps COI
- Router performance data – December 2008
- IP Route topology – December 2008

DISA Integrated View of Shared Data

The screenshot displays the NeuralStar application interface with several key components:

- Dashboard:** Features multiple charts and gauges including 'Node: avgBusy5', 'Interface: Utilization In', 'Unack = 273 Total = 327', 'NPRW009-Se0/1/1', 'SPRW001', and 'SPRW001-Se5/0/0'.
- Shared Inventory Data:** A central network diagram showing connections between various nodes and interfaces.
- Alarm Detail:** A pop-up window showing details for an alarm, including Class Name, Location, Time Last, and Circuit ID.
- Shared TT Data:** A 'GST Trouble Ticket' window showing ticket details for SCTR-AR00347799, including status (PENDING), action description, and impacted communities.
- Object Alarm Historical Summary:** A table summarizing historical alarm data for NPRW108.

Object Name	Location	Time Period	# Of Inactive Outages	Total # Of Outages	Total Outage Time	Average Outage Time
	NorthIsCA	Last hour	1	1	0 Days 00:10:03 Hours	0 Days 00:10:03 Hours
	NorthIsCA	Last 8 hours	145	5	0 Days 02:40:12 Hours	0 Days 00:32:02 Hours
	NorthIsCA	Current Day	0	14	0 Days 09:30:22 Hours	0 Days 00:40:44 Hours
	NorthIsCA	Last 24 hours	0	15	0 Days 09:40:23 Hours	0 Days 00:38:41 Hours
	NorthIsCA	Last week	0	111	2 Days 05:16:31 Hours	0 Days 00:28:47 Hours
