# Annual Industry Accounts 

## Advance Estimates for 2005

By Thomas F. Howells III and Kevin B. Barefoot

IN 2005, both the private services-producing and private goods-producing sectors of the United States economy continued to grow strongly, but the growth rates in both sectors were lower than in 2004, according to the advance estimates of gross domestic product (GDP) by industry. In addition, price growth in both sectors accelerated slightly.

The advance estimates of GDP by industry were released by the Bureau of Economic Analysis (BEA) on April 27, 2006. These estimates reflect newly available source data on the distribution of growth in real GDP and inflation by industry. Highlights of the estimates include the following:

- The services-producing sector increased 4.1 percent in 2005, down from 4.9 percent in 2004. The largest contributors to growth were the information, "professional, scientific, and technical services," and finance and insurance industry groups. These three industry groups accounted for almost half of the growth in this sector and almost two-fifths of the 3.5-percent real GDP growth in 2005.
-The finance and insurance and "real estate, rental, and leasing" industry groups together increased 4.1 percent in 2005, up from 3.8 percent in 2004. The real estate, rental, and leasing industry group increased 2.5 percent in 2005, down from 5.6 percent in 2004. This slowdown was offset by strong growth in the finance and insurance industry group, which increased 6.7 percent in 2005, up from just 1.0 percent in 2004.
- Manufacturing was the largest contributor to the 2.6-percent real growth in the goods-producing sector, increasing 4.0 percent in 2005. Within this industry group, durable-goods manufacturing increased 5.7 percent, partly because of strong growth in computer and electronic products.
- Information-communications-technology-(ICT)producing industries, which include industries from both the goods-producing and services-producing sectors, experienced double-digit growth for
the second consecutive year, increasing 11.9 percent in 2005. Although ICT-producing industries accounted for only 3.9 percent of current-dollar GDP, these industries accounted for 12.6 percent of real GDP growth.
- Growth in value-added prices was widespread in 2005, with prices rising in 19 of the 22 industry groups. Prices in the services-producing sector accelerated slightly to 2.6 percent in 2005, the fastest growth since 1993. Price growth in the goods-producing sector remained above 3.0 percent for the third consecutive year partly due to continued strong price growth in mining.
- Value-added prices in the manufacturing industry group increased 1.4 percent, the first increase since 1995, partly because of a 3.7 -percent price growth in nondurable goods manufacturing.
- Strong growth in energy prices continued to impact both the services-producing and goods-producing sectors although the advance estimates provide only limited information on the nature of the effect. Additional information will be available with the release of the integrated industry accounts in the fall of 2006.
The advance estimates were prepared for broad industry groups using a methodology that incorporates summary source data from the "final" estimate of fourth-quarter GDP in the national income and product accounts (NIPAs). The advance estimates will be revised in the fall of 2006 to incorporate more detailed industry source data. The revised estimates will be prepared using BEA's integrated annual industry accounts methodology and will include both the GDP-by-industry accounts and the input-output accounts. ${ }^{1}$

The remainder of this article includes a discussion of industry trends and developments, an appendix describing the methodology used to prepare the advance

[^0]estimates, and nine tables that present the advance estimates for 2005 and the more detailed estimates for 2002-2004 (see the box "Data Availability").

## Data Availability

The advance estimates of value added by industry are presented in current dollars, chained (2000) dollars, chain-type quantity indexes, and chain-type price indexes. Annual input-output accounts for 2005 will not be available until late 2006.

The estimates for 2005 and the full set of annual industry accounts are available interactively on BEA's Web site; go to <www.bea.gov>, and under "Industry," click on "Annual Industry Accounts."

## Industry Performance

In 2005, both the services-producing and goods-producing sectors continued to grow strongly, but growth rates in each sector were lower than in 2004 . The ser-vices-producing sector continued to lead real growth for the U.S. economy, driven primarily by growth in four industry groups-the finance and insurance, "real estate, rental, and leasing," professional and business services, and information industry groups. Growth in the goods-producing sector decelerated in 2005, reflecting slower growth in the manufacturing industry group.

Value-added price growth in both the services-producing and goods-producing sectors accelerated slightly for the second consecutive year, and growth in each sector continued to increase above its average annual pace in 1995-2000. ${ }^{2}$ Strong growth in energy prices continued to affect both sectors in 2005. Growth was widespread with prices increasing in 19 of the 22 industry groups. The major contributors to price growth were the "real estate, rental, and leasing" and wholesale trade industry groups in the services-producing sector and the mining and construction industry groups in the goods-producing sector.

## Real economic growth

Services-producing sector. In 2005, real value added for the private services-producing sector increased 4.1 percent, down from 4.9 percent in 2004 (chart 1). The slowdown was partly due to slower growth in the retail

[^1]and wholesale trade and "real estate, rental, and leasing" industry groups. However, the services-producing sector remained strong; growth accelerated in 7 of the 15 services-producing industry groups. The services sector continued to be the main engine of real economic growth. It accounted for 79.4 percent of real GDP growth, more than its 68.2-percent share of

## Chart 1. Annual Percent Changes in Real Value Added

U.S. Bureau of Economic Analysis

## The Effects of Hurricanes Katrina and Rita on GDP by Industry

Estimates of the effects of Hurricanes Katrina and Rita on GDP by industry are not available. Estimates of value added, which measure industries' current production of goods and services, are not directly affected by the loss of property (structures and equipment). ${ }^{1}$ Value added is affected by the actions that consumers, businesses, and governments take in response to the disruptions in production and loss of property from such disasters. These actions, which include the cancellation of tourism-related activities and rebuilding begun in 2005, are reflected, but not separately identified, in the regular source data that BEA uses to prepare its estimates of GDP by industry. Additional data on the regional effects of Hurricanes Katrina and Rita will be available with the release of BEA's accelerated estimates of gross state product by industry for 2005 on June 6, 2006.

1. For more information on the treatment of property losses and associated insurance transactions, see Brent R. Moulton and Eugene P. Seskin, "Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: Changes in Definitions and Classifications," Survey of Current Business 83 (June 2003): 17-34
current-dollar GDP (table A).
For the second consecutive year, the information and "professional, scientific, and technical services" industry groups were the fastest growing groups in the economy, with growth of 7.4 percent and 7.0 percent, respectively (see appendix tables for detailed industry statistics). ICT-producing industries, which include industries from both of these groups, grew 11.9 percent in 2005 (table B). ICT-producing industries accounted for only 3.9 percent of current-dollar GDP but for 12.6 percent of real GDP growth.

The finance and insurance industry group increased 6.7 percent in 2005 and contributed 0.53 percentage point to real GDP growth. This industry group was one of the largest contributors to real GDP growth relative to its size in the economy. It accounted for 15.1 percent of real GDP growth but for only 8.1 percent of current-dollar GDP.

Growth in the accommodation and food services industry group accelerated to 4.8 percent in 2005, exceeding its average annual growth rate of 3.9 percent in 1995-2000 for the first time since 2000.

Overall, the largest contributors to economic growth in the services-producing sector were the information, "professional, scientific, and technical services," and finance and insurance industry groups. These three industry groups accounted for almost half of growth in the services-producing sector and for two-fifths of overall GDP growth. They were also among the largest contributors to real GDP growth relative to their size in the economy, each with a percent-

|  |  |  |  |

age contribution to real GDP growth that was about twice its current-dollar share of GDP.

Goods-producing sector. The private goods-producing sector continued to expand in 2005, increasing 2.6 percent, compared with 3.9 percent in 2004 . The 2005 growth rate was considerably stronger than the 1.2-percent growth in 2003 and the 1.3-percent growth in 2002. This sector accounted for more than 19 percent of current-dollar GDP in 2005 and for almost 15 percent of real GDP growth. Only one of the five goods-producing industry groups, durable-goods manufacturing, increased faster than real GDP in 2005.

Slower real growth in the goods-producing sector reflected growth in manufacturing and construction that was restrained by declines in mining and agriculture. The manufacturing industry group remained strong, as real value added increased 4.0 percent in 2005, down from 4.8 percent in 2004. Manufacturing accounted for nearly all of the goods-producing sector's 0.51 -percentage-point contribution to real GDP growth. The mining and "agriculture, forestry, fishing, and hunting" industry groups declined 2.6 percent and 4.4 percent, respectively.

In the manufacturing industry group, durablegoods manufacturing increased 5.7 percent and continued to lead growth in the goods-producing sector partly because of the continued strength of computer and electronic products. Durable-goods manufacturing accounted for 11.1 percent of real GDP growth, more than one and a half times more than its 7.0

Table B. Percent Changes in Real Value Added by Industry Group
$\left.\begin{array}{c|r|r|r|r|r}\hline & & & & & \begin{array}{c}\text { Average } \\ \text { annual }\end{array} \\ \text { rate of }\end{array}\right]$

[^2]percent share of current-dollar GDP. It was the only goods-producing industry group that had a share of real GDP growth larger than its current-dollar share.

## Price growth

Services-producing sector. Growth in value-added prices in the services-producing sector accelerated slightly to 2.6 percent, the largest increase since 1993 (chart 2). The largest contributors to price growth in this sector, accounting for 43 percent of price growth in the services-producing sector, were the "real estate, rental, and leasing," wholesale trade, and health care and social assistance industry groups. Of these three industry groups, wholesale trade was the largest contributor to price growth relative to its size in the economy, accounting for 8.9 percent of GDP price growth but for only 5.9 percent of current-dollar GDP (table C). Similarly, the transportation and warehousing industry group accounted for 5.0 percent of GDP price growth but for only 2.9 percent of current-dollar GDP.

The slight acceleration in price growth in the ser-vices-producing sector was partly due to an acceleration in the professional, scientific, and technical services industry group and a smaller decline in the information industry group. ICT-producing industries, which include industries from these two industry

Table C. Engines and Anchors of GDP Price Growth, 2005

Consists of computer and
and data processing services; and computer systems design and related services.
percent in 2005 after increasing 3.3 percent in 2004 and 3.2 percent in 2003. This sector accounted for 23.6 percent of GDP price growth in 2005, down from 25.0 percent in 2004 and 30.5 percent in 2003.

Price growth in this sector was marked by increases in the mining, manufacturing, and construction industry groups. Mining price growth accelerated to 27.5 percent in 2005 from 18.1 percent in 2004. Growth in mining prices accounted for more than half of the goods-producing sector's contribution to GDP price growth. The mining industry group was the largest contributor to value added price growth relative to its size in the economy. It accounted for 13.9 percent of GDP price growth, or more than 8 times its 1.7 -percent share of current-dollar GDP. Manufacturing prices turned up slightly to 1.4 percent in 2005, the first increase since 1995. This upturn partly reflected sharp increases in nondurable-goods manufacturing, primarily due to price growth in petroleum-related products. Prices in the construction industry group increased 5.1 percent in 2005 after increasing 7.0 percent in 2004.

The agriculture, forestry, fishing, and hunting industry group restrained price growth in 2005 for the goods-producing sector. Value-added prices for this

## Current Initiatives

BEA is currently researching two improvements to the advance estimates of the annual industry accounts. First, research is under way to incorporate a doubledeflation procedure for computing real value added by industry. This method would be similar to that used for the integrated annual industry accounts, but the level of commodity detail used for the deflation of gross output and intermediate inputs would be less detailed. ${ }^{1}$ This research also allows BEA to make ongoing improvements to the estimates prepared using the current single-deflation methodology. Second, BEA is evaluating the feasibility of increasing the level of industry detail in order to include many of the industries that are currently published only as part of the integrated annual industry accounts and to include additional estimates, such as gross output and the components of value added.

[^3]industry group declined 12.0 percent, following an increase of 21.8 percent in 2004.

## Appendix: Methodology for the Advance 2005 Estimates

The advance estimates for 2005 were prepared for broad industry groups using a methodology that was developed to incorporate summary source data. The advance estimates are published at the 1997 North American Industry Classification System (NAICS) two-digit industry level. The preparation of the estimates uses a methodology that draws heavily on data from the NIPAs for both the current-dollar estimates and the real estimates of value added by industry. ${ }^{3}$ This methodology and level of industry detail differ from the methodology and level of detail found in the integrated annual industry accounts. ${ }^{4}$

Current-dollar estimates. The current-dollar estimates of value added by industry are prepared by extrapolating the industry estimates of compensation of employees, gross operating surplus, and "taxes on production and imports less subsidies" by published and unpublished industry data from the NIPAs. ${ }^{5}$ Compensation of employees by industry is extrapolated by the sum of industry wage and salary accruals and supplements to wages and salaries. Gross operating surplus by industry is extrapolated by the sum of industry corporate profits, proprietors' income, capital consumption allowances, net interest, and net business current transfer payments. These components account for nearly all of the gross operating surplus for most industries. Industry estimates of "taxes on production and imports less subsidies" are extrapolated by applying industry group estimates directly to each detailed industry. ${ }^{6}$ Estimates of value added for farms and

[^4]
## Acknowledgments

Erich H. Strassner of the Current Industry Analysis Division (CIAD) supervised the preparation of the estimates. Sumiye Okubo, Associate Director for Industry Accounts, Ann M. Lawson, Chief of CIAD, and George M. Smith, Chief of the Goods and Value Added Branch provided overall guidance. The estimates for 2005 were prepared by Kevin B. Barefoot and Thomas F. Howells III. Bradlee A. Herauf prepared material for BEA's Web site. Sherlene K.S. Lum, Chief of the Services Branch, Gabriel W. Medeiros, Conrad E. Roesch, and Robert E. Yuskavage, Senior Economist in the Office of the Associate Director for Industry Accounts, provided valuable assistance.

The following CIAD staff also contributed to the preparation of the advance estimates:

Information, finance, health, and agriculture: Robert J. Corea, Matthew J. Gruenberg, Tameka R.L. Harris, and Brian M. Lindberg. Transportation, utilities, and government: Paul V. Kern, Greg R. Linder, Sarah R. Mattingly, and Cameron T. Vincent. Mining, construction, manufacturing, and trade: Robert J. McCahill, Anna M. Jacobson, Amanda C. Roberts, and Shawn L. Snyder. Processing: Felicia V. Candela and William H. Nicolls IV.

Staff members of the National Income and Wealth Division and the Government Division-particularly Nicole M. Mayerhauser, Brian C. Moyer, Deputy Chief of the National Income and Wealth Division, and Clark F. Schier-contributed to the development of the estimates. Staff members of the Office of the Chief Information Officer, particularly Stephen P. Holliday and Douglas J. Klear, helped reengineer the data-processing application that was used to prepare the estimates.
general government are obtained from the NIPAs.
Real estimates. Chain-type price and quantity indexes and chained-dollar estimates of value added by industry are prepared using a single-deflation methodology. An industry's current-dollar estimate of value added is deflated using the industry's gross output price index. ${ }^{7}$ A Fisher aggregation of the detailed industries yields the chain-type price and quantity indexes for industry groups. The gross output price indexes for detailed industries are implicit price deflators that are computed as current-dollar gross output divided by chained-dollar gross output. For detailed industries, both current-dollar and real gross output are extrapolated by a variety of source data from the NIPAs, from other Federal Government agencies, and from private institutions.
7. Single deflation best approximates the results obtained through double deflation when an industry's input prices and output prices are growing at about the same rate. Under double-deflation, real value added is computed indirectly as the difference between real gross output and real intermediate inputs. For more information, see Robert E. Yuskavage, "Gross Domestic Product by Industry: A Progress Report on Accelerated Estimates," Survey 82 (June 2002): 21.

1. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 currentdollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estmates are usually not add. differences in source data used to estimate GDP by industry and the expenditures measure of real GDP
2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assis tance, arts, entertainment, recreation, accommodation, and food services; and other services, except government 4. Consists of computer and electronic products; publishing industries (includes software); information and data
processing services; and computer systems design and related services.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other care, and social assisence, except government.
server
3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

[^0]:    1. In the fall of 2006, BEA will release revised annual industry estimates for 2003-2005.
[^1]:    2. The value-added price index for an industry reflects both the prices that it receives for its output and the prices that it pays for its intermediate inputs. For more information, see the box "Interpreting the Value-Added Price Index" in Robert E. Yuskavage and Mahnaz Fahim-Nader, "Gross Domestic Product by Industry for 1947-86," Survey of Current Business 85 (December 2005): 77.
[^2]:    Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.
    2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.
    3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

[^3]:    1. More precisely, the deflation of intermediate inputs would be similar to that used to prepare the GDP-by-industry estimates for 1987-97. For more information, see Robert E. Yuskavage and Yvon H. Pho, "Gross Domestic Product by Industry for 1987-2000: New Estimates on the North American Industry Classification System," Survey 84 (November 2004): 38-39.
[^4]:    3. Definitional and conceptual differences limit the comparability of some NIPA and industry measures. For example, in the NIPAs, the value added by goods-distribution industries (transportation and trade) is included in the market value of goods. However, in the annual industry accounts, the value added of these industries is included in the servicesproducing sector. For more information, see Robert E. Yuskavage and Yvon H. Pho, "Gross Domestic Product by Industry for 1987-2000: New Estimates on the North American Industry Classification System," Survey 84 (November 2004): 38-39.
    4. The annual industry accounts for 1998-2004 were prepared at the NAICS three-digit industry level using a more comprehensive methodology that integrates detailed source data within an input-output framework that balances and reconciles industry production with commodity usage. For more information, see Brian C. Moyer, Mark A. Planting, Mahnaz FahimNader, and Sherlene K.S. Lum, "Preview of the Comprehensive Revision of the Annual Industry Accounts," Survey 84 (March 2004): 38-51.
    5. Current-dollar value added in the annual industry accounts is measured as the sum of industry distributions of compensation of employees, gross operating surplus, and "taxes on production and imports less subsidies."
    6. Estimates at the NAICS two-digit industry level are applied to the NAICS three-digit industry level for taxes on production and imports, and the ratio of an industry's share of total subsidies is held constant from the previous year.
[^5]:    1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing
    2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance,
