July 2007

Welcome

This goose, designed by J.N. "Ding" Darling, has become a symbol of the National Wildlife Refuge System.

The Missisquoi National Wildlife Refuge, established in 1943, is on the eastern shore of lake Champlain near the Canadian border in northwestern Vermont. The refuge headquarters is two miles north of Swanton on Route 78. Several diverse habitats make up the 6,592 acre refuge. The flood plain, sloughs and marshes of the Missisquoi River delta provide major nesting grounds for migratory waterfowl. Beds of wild rice (often called "duck candy), stands of arrowhead, bulrush and wild celery along with frogs and fish provide plentiful sources of food. In addition to 5,000 acres of natural marsh, the refuge includes 1,200 acres of managed wetlands formed by three diked impoundments. These pools offer additional sources of food, cover and nesting habitat for waterfowl.

Upland forested areas contain a mixture of hardwood species including white and red oak, white ash, white pine, American beech, hickory and butternut. By far, the majority of forested communities on the refuge are comprised of flood tolerant species such as swamp white oak, silver and red maple, cottonwood, and green ash. The refuge also maintains areas of early successional hardwoods such as alders, birch and poplar for migratory song birds and American woodcock. Shad island, at the mouth of the river delta, is home to the largest great blue heron rookery in Vermont. The refuge provides nesting grounds for ninetyfive percent of Vermont black terns. Artificial nesting box structures distributed in suitable habitats throughout the refuge supplement natural tree cavities and augment productivity of cavity nesting species such as wood ducks, goldeneye and hooded mergansers. Other species

such as Northern flying squirrels, screech owls and pileated woodpeckers occasionally use the nesting boxes as well. The installation of nesting platforms and tripods on the refuge to supplement natural nesting sites for the endangered osprey have proven successful as osprey numbers continue to rise on the refuge.

The refuge provides habitat for over 200 species of birds.

This list was updated in 1995 by Michele Patenaude, expert birder and refuge volunteer. The list was again revised in 2001 as a result of grassland and marshbird surveys conducted on the refuge and visitor observations.

Missisquoi National Wildlife Refuge

This checklist includes more than 200 species of birds and is based on observations by refuge personnel and visiting ornithologists. If you should find an unlisted species, please let us know at refuge headquarters. We appreciate your help in updating our records.

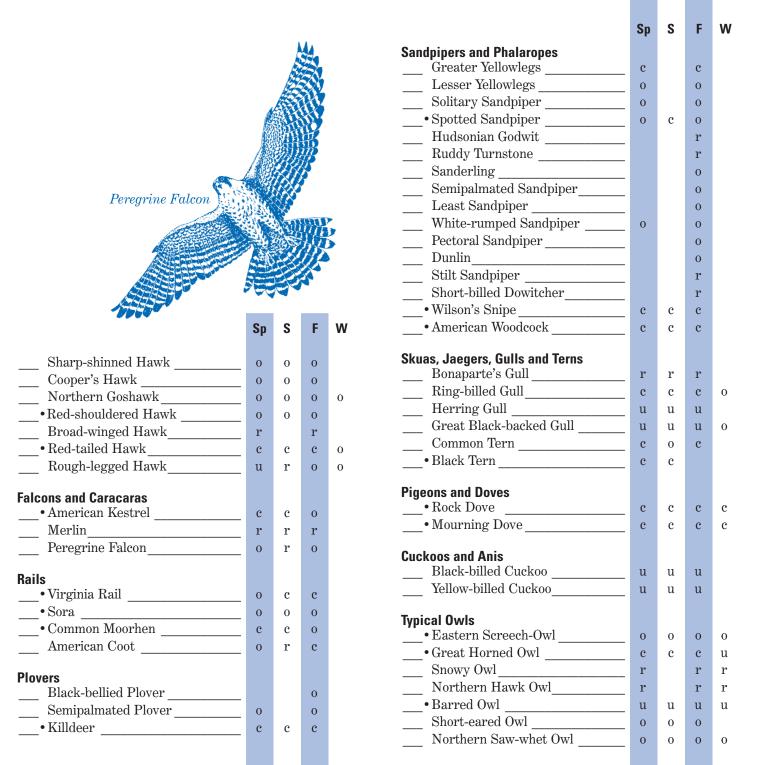

Several trails are located on the refuge and provide good opportunities for bird observation. Insect repellent may be useful during the warmer months.

Most of the refuge is accessible only by boat. Public boat ramps on the refuge are located at Louie's Landing and Mac's Bend. Visitors are advised to consult the general refuge leaflet for the boat ramp access and trail locations.

How to use your checklist

The bird checklist was designed to be informative and simple to use. The list is arranged in the order established by the American Ornithological Union. Symbols which appear in this checklist represent the following:

Seasonal appearance	1 11/1					Sp	s	F	W
	ch – May e – August				Red-breasted Merganser	\mathbf{r}		r	
	tember – Noven	ıber			Ruddy Duck			0

Birding Ethics

The membership of the American Birding Association believes that all birders have an obligation at all times to protect wildlife, the natural environment, and the rights of others and asks that all birders adhere to the following guidelines of good birding behavior.

Birders must always act in ways that do not endanger the welfare of birds or other wildlife.

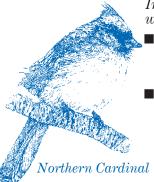

In keeping with this principle, we will:

- Observe and photograph birds without knowingly disturbing them in any significant way.
- Avoid chasing or repeatedly flushing birds.
- Keep an appropriate distance from nests and nesting colonies so as not to disturb the birds or expose them to danger.
- Disturb wintering wildlife as little as possible, particularly during critical feeding and resting periods. They need all their energy reserves to withstand the stresses of harsh winter and migration.

II. Birders must always act in ways that do not harm the natural environment.

In keeping with this principle, we will:

- Stay on existing roads, trails and pathways whenever possible to avoid trampling.
- Leave all habitat as it was found. Many birds die when they become entangled in discarded fishing lines, 6 pack rings and other trash, or when they mistake garbage for food.

III. Birders must always respect the rights of others.

In keeping with this principle, we will:

- Respect the privacy and property of others by observing "No Trespassing" signs.
- Observe all laws and the rules and regulations that govern public use of birding areas.
- Always behave in a manner that will enhance the image of the birding community in the eyes of the public.

IV. Birders in groups should assume special responsibilities.

As group members, we shall:

- Take special care to alleviate the problems and disturbances that are multiplied when more people are present.
- Act in consideration of the group's interest, as well as our own.
- Support by our actions the responsibility of the group leader(s) for the conduct of the group.

As group leaders, we will:

- Assume responsibility for the conduct of the group.
- Learn and inform the group of any special rules, regulations or conduct applicable to the area or habitat being visited.
- Limit groups to a size that does not threaten the environment or the peace and tranquility of others.
- Teach others birding ethics by our words and example.
