

## 2005 Summary Statistics

### The Total Number of Foodborne Disease Outbreaks by Etiology

<i><b>Etiology</b></i>	<i><b>No. Outbreaks</b></i>	<i><b>No. Cases</b></i>
Bacterial	188	4,348
Chemical	40	151
Parasitic	6	739
Viral	170	5,018
Multiple	6	525
Total Confirmed Etiology	410	10,781
Unknown Etiology	572	9,398
<b>Total</b>	<b>982</b>	<b>20,179</b>

Foodborne disease outbreaks are reported to the Centers for Disease Control and Prevention, Foodborne and Diarrheal Diseases Branch each year by state, local and territorial health departments. A foodborne disease outbreak (FBDO) is defined as the occurrence of two or more cases of a similar illness resulting from the ingestion of a common food.

Reported FBDOs are listed by year and etiology type. Within each etiology category, outbreaks are sorted by confirmed etiology (met the criteria specified in the guidelines for confirmation of foodborne-disease outbreak

[http://www.cdc.gov/foodborneoutbreaks/guide\\_fd.htm](http://www.cdc.gov/foodborneoutbreaks/guide_fd.htm)), the state in which the exposure took place and by month of first onset. Variables in the line listing include confirmed etiology, state where the exposure took place, month of first onset, vehicle, location of food consumption and a comment field. Vehicle(s) identified are not necessarily confirmed with statistical or epidemiological evidence; all vehicles identified by the reporting agency are listed in the line listing. Outbreaks in which an etiology was suspected (not confirmed) are listed in the Etiology Unknown section and the suspected etiology is identified in the comment field. Outbreaks in which multiple etiologies were confirmed are listed under Multiple Etiologies.
