

## Earthquake Kit Treasure Hunt

K-5

Wendy Shindle

### Key Points:

- To reinforce the idea of earthquake preparedness
- To teach the students the components of an earthquake kit.

### Materials:

- Bottled water
- First Aid kit (band-aids, bandages, etc.)
- Canned Food
- Blanket
- Shoes
- Medicine
- Battery operated radio
- Flashlight
- Anything else you would like to include

### Procedure:

1. Hide the items around the classroom, auditorium or playground.
2. Talk to the students about earthquake safety and preparedness, and ask them what they think should go into an earthquake kit.
3. Divided the students into teams and let them search for kit materials.
4. The team that finds the most materials wins the game.
5. Assemble the materials into the kit and keep them in your classroom.

### Extension:

1. Hide the items around the school and design a map for them to follow. Give them compasses and see if they can orient themselves on the map and find the items.
2. Encourage them to make earthquake kits for their families.
