3-Year	10.34%	10.16%
5-Year	17.78%	17.83%
10-Year	N/A	7.69%
Since Inception May 1, 2001	9.35%	9.39%

\* After expenses

## Growth of \$100

Since Inception

## Key Features

- The S Fund offers the opportunity to earn a potentially high investment return over the long term by investing in the stocks of small and medium-sized U.S. companies.
- The objective of the S Fund is to match the performance of the Dow Jones Wilshire 4500 Completion (DJW 4500) Index, a broad market index made up of stocks of U.S. companies not included in the S&P 500 Index.
- There is a risk of loss if the DJW 4500 Index declines in response to changes in overall economic conditions (market risk).
- Earnings consist of gains (or losses) in the prices of stocks, and dividend income.

## S Fund Returns\* 1998–2007

\* For periods before the inception of the S Fund on May 1, 2001, the return shown is the return of the DJW 4500 Index (without deductions for management fees, trading costs, or administrative expenses); the 2001 return is a blended return.

## DJW 4500 Top Ten Holdings

as of December 31, 2007

MasterCard, Inc. (Class A stock)  
Liberty Media Holding Corp. Capital  
Liberty Global, Inc. (Class A stock)  
Bunge Ltd.  
The Mosaic Co.  
Seagate Technology, Inc.  
McDermott International, Inc.

# S FUND FACTS

By law, the S Fund must be invested in a portfolio designed to replicate the performance of an index of U.S. common stocks, excluding those that are held in the C Fund. The Federal Retirement Thrift Investment Board has chosen, as its benchmark, the Dow Jones Wilshire 4500 Completion (DJW 4500) Index, which tracks the performance of the actively traded non-S&P 500 stocks in the U.S. stock market.

The **DJW 4500 Index** is an index of all actively traded U.S. common stocks that are not included in the S&P 500 Index. The index is designed to be the broadest measure of the non-S&P 500 domestic stock markets. As of December 31, 2007, the index was comprised of 4,351 common stocks (including 111 Real Estate Investment Trusts (REITs), which accounted for 4.4% of the market value of the index). The DJW 4500 Index made up approximately 25% of the market value of the U.S. stock markets; the S&P 500 accounted for the other 75%. Thus, the combined S Fund and C Fund cover virtually the entire U.S. stock market.

The DJW 4500 Index is weighted by float-adjusted market capitalization, in which a company's market value and its weighting in the index are calculated using the number of shares that are freely traded, rather than all outstanding shares. Shares that are not freely traded, such as the holdings of controlling shareholders and their families, company management, and other companies, are excluded from the calculation. A company's weighting in the index is the float-adjusted market value of the company (that is, the share price multiplied by the number of freely traded shares outstanding) as a percentage of the combined float-adjusted market value of all companies in the index. As of December 31, 2007, the largest 100 companies in the DJW 4500 Index represented 27.5% of the index.

## DJW 4500 Index Major Industry Groups December 31, 2007

### Barclays Extended Market Index Fund

— The S Fund is invested in the Barclays Extended Market Index Fund. The DJW 4500 Index contains a large number of stocks, including illiquid stocks with low trading volume and stocks with prices lower than \$1.00 per share. Therefore, it is not efficient for the Barclays Extended Market Index Fund to invest in every stock in the index. The Barclays fund holds the stocks of most of the companies in the index with market values greater than \$1 billion. However, a mathematical sampling technique is used to select among the smaller stocks. Barclays' mathematical model considers size and industry group to match the industry weights in the index. Within each industry group, Barclays selects stocks that, together, are expected to produce a return that is very close to the industry's return in the DJW 4500 Index. The performance of the Extended Market Index Fund is evaluated on the basis of how closely its returns match those of the DJW 4500 Index. A portion of Extended Market Index Fund assets is reserved to meet the needs of daily client activity. This liquidity reserve is invested in futures contracts of the S&P 400 and Russell 2000 (other broad equity indexes).

The S Fund invests in the Barclays Extended Market Index Fund by purchasing shares of the Barclays Extended Market Index Fund "E," which, in turn, holds a liquidity pool and shares of the Barclays Extended Market Index Master Fund. As of December 31, 2007, S Fund holdings constituted \$18.8 billion of the Extended Market Index Master Fund, which itself held \$26.5 billion in securities.

**Note:** Participants' interfund transfer (IFT) requests redistribute their existing account balances among the TSP funds. For each calendar month, the *first two* IFTs can redistribute money among any or all of the TSP funds. After that, for the remainder of the month, IFTs can *only* move money into the G Fund. (For participants with both civilian and uniformed services accounts, this rule applies to each account separately.)
