

Hazard Management System Demonstration

NS3/Safety & Mission Assurance

JSC White Sands Test Facility

March 2005

Cocoa Beach
Double Tree

The JSC/WSTF contingent heads over the rainbow with tales of a magical Hazard Management System.

HGL software developer

Meanwhile, crafty contractors scheme to exploit the wonders of information technology for the sake of improved ground safety.

Outline

- **The Team**
- **Background**
 - **Worksite Analysis & the Hazard Management Paradigm**
- **System Objective**
- **Proposed System Capabilities**
- **Applicable NASA Requirements**
- **System Demonstration**
- **Hazard Management Leading Metrics**
- **Products -- What we got & What we want**

The Team

Angela Luna – WSTF S&MA, Project Manager

Don Hall – WSTF S&MA, Hazard Analysis and Safety Reqmts

Case Van Dyke – HTSI Safety, Project Leader

Denzil Burnam – HTSI Safety, User/Data Consultant

Ted Lillys -- HGL, Project Manager

Gerald Burnette -- HGL, The Man Behind the Curtain

Background

- **Pervasive and comprehensive requirements driving hazard management from multiple perspectives**
 - **Hazardous conditions noted in inspections**
 - **Job Hazard Analysis focus on individual behaviors**
 - **Process Hazard Analysis focus on systems**
 - **Worksite Analysis focus on environmental conditions and potential exposures**
- **Multiple requirements resulting in overlap in analysis techniques and results, driving inefficiencies and confusion**
- **Greater emphasis on employee involvement driving need for quick, concise access to, and communication of, relevant hazards and associated controls**
- **Hunger for real time hazard assessment**

Worksite Analysis -- Screening Out Hazards

The Hazard Management Paradigm

- Different tools
- Different products
- Different audiences
- Different uses
- One common element...

IDENTICAL HAZARD INFORMATION!!!!

System Objective

Need an information system that sorts individually identified hazards independent of the activity, technique, or tool used, and manages the hazard, it's analysis, control, and communication.

System Capabilities

- **Internet accessible**
- **Security controls on access and modification**
- **Keyboard entry of “new” hazards**
- **View existing hazard documentation**
- **Indexing of hazards to identify:**
 - **Location**
 - ❖ **Categorization of hazard to identify exposure type, i.e. explosive, toxic, impact, etc.**
 - ❖ **Component**
 - **Affected Employee (Position)**
 - ❖ **Hazard Severity, Probability, and Risk Assessment Code**
 - ❖ **Control codes, direction, and references**
 - **Control owner (Name)**
- **Multiple standard sorts and reporting features**
 - ❖ **These are “what we want” items**

System Capabilities

- **Facilitate “build” of hazards analyses based on pick lists of standard hazard categories and allowing for tailored entries**
 - **Process Hazard Analysis**
 - **Job Hazard Analysis**
 - **FMEA**
 - **Inspection/Survey Report**
 - ❖ **System Safety Analysis**
- ❖ **Recommend controls citing hazard reduction precedence**
- **Assign actionees for control and schedule suspense targets**
- ❖ **Track hazard analysis control status based on application sort -- facility, system, component, location, affected employee, etc.**
- **E-mail notification features for control input, action response, and scheduled maintenance (PSM)**
- **Electronic approval authorities for reports**
- **Adaptable to any other NASA facility**
 - ❖ **These are “what we want” items**

Hazard Management Metrics

Improvement Factor –

Prototyped at WSTF, this metric provides for running ratio of positive to negative findings. Provides “leading metric” for safety culture maturity based on inspection results.

Hazard Control Maturity Index –

Allows for aggregate measurement of task, system, area, or process hazard control effectiveness based on hazard reduction precedence level of applied controls. The metric control improvement, thereby bolstering mishap prevention efforts.

Graphic Information System Hazard Visualization

Allows for visual representation of overall hazards present in a given geographical area based on the number and RAC level of managed hazards in the associated area.

SIMS Improvement Factor vs. Injuries

Three Month Rolling Average

GIS Hazard Visualization

Hazard Analysis (HA)

WSI 04-SW-0002, Hazard Recognition & Control

Hazard Reduction Precedence Sequence

- **Design to Eliminate the Hazard**
EXAMPLE -- Use Referee Fluid
- **Provide Engineering Controls or Safety Devices**
EXAMPLE -- Interlocks, Machine guards
- **Provide Cautions and Warnings**
EXAMPLE -- Warning Lights, PA, alarms, signs
- **Develop Procedural Controls**
EXAMPLE -- Cell entry, test panel safing
- **Provide Personal Protective Equipment (PPE)**
EXAMPLE -- Gloves, ILC, eye protection

Hazard Control Maturity Index

$$\frac{\sum_i^n (RAC)_i (HRP)_i}{n} = HCMI$$

RAC i = Individual Risk Assessment Code of hazard
 HRP i = Individual Hazard Reduction Precedence of control
 HCMI = Aggregate Hazard Control Maturity Index

RAC levels run 1 (Bad) to 7 (Good)

HRP levels run 1 (Procedural/PPE) to 5 (Eliminated)

Example Typical System:

3 RAC 1 hazards reduced w/Engineering Controls

$$\frac{\sum_i^n (RAC)_i (HRP)_i}{n} = HCMI \qquad \frac{1(4)+1(4)+1(4)}{3} = 4.0$$

Improve Hazard controls to eliminate 2 RAC 1 hazards --> Improved HCMI

$$\frac{\sum_i^n (RAC)_i (HRP)_i}{n} = HCMI \qquad \frac{1(5)+1(5)+1(4)}{3} = 4.67$$

Applicable NASA Requirements

NPR 8715.3, “NASA Safety Manual” Rev I. 6/19/02

JPR 1700.1, “JSC Safety and Health Handbook”

Part 2, Worksite Analysis

JSC 17773, “Instructions For Preparation of Hazard Analysis For JSC Ground Operations”

WSI 04SW-0002, “Hazard Recognition & Control”

WSI 25SW-0005, “Process Safety Management of Highly Hazardous Chemicals”

WSI 25SW-0015, “Workplace Hazard Inspection”

WSI 25SW-0032, “Job Hazard Analysis Instructions”

29 CFR 1910.119, “Process Safety Management of Highly Hazardous Chemicals”

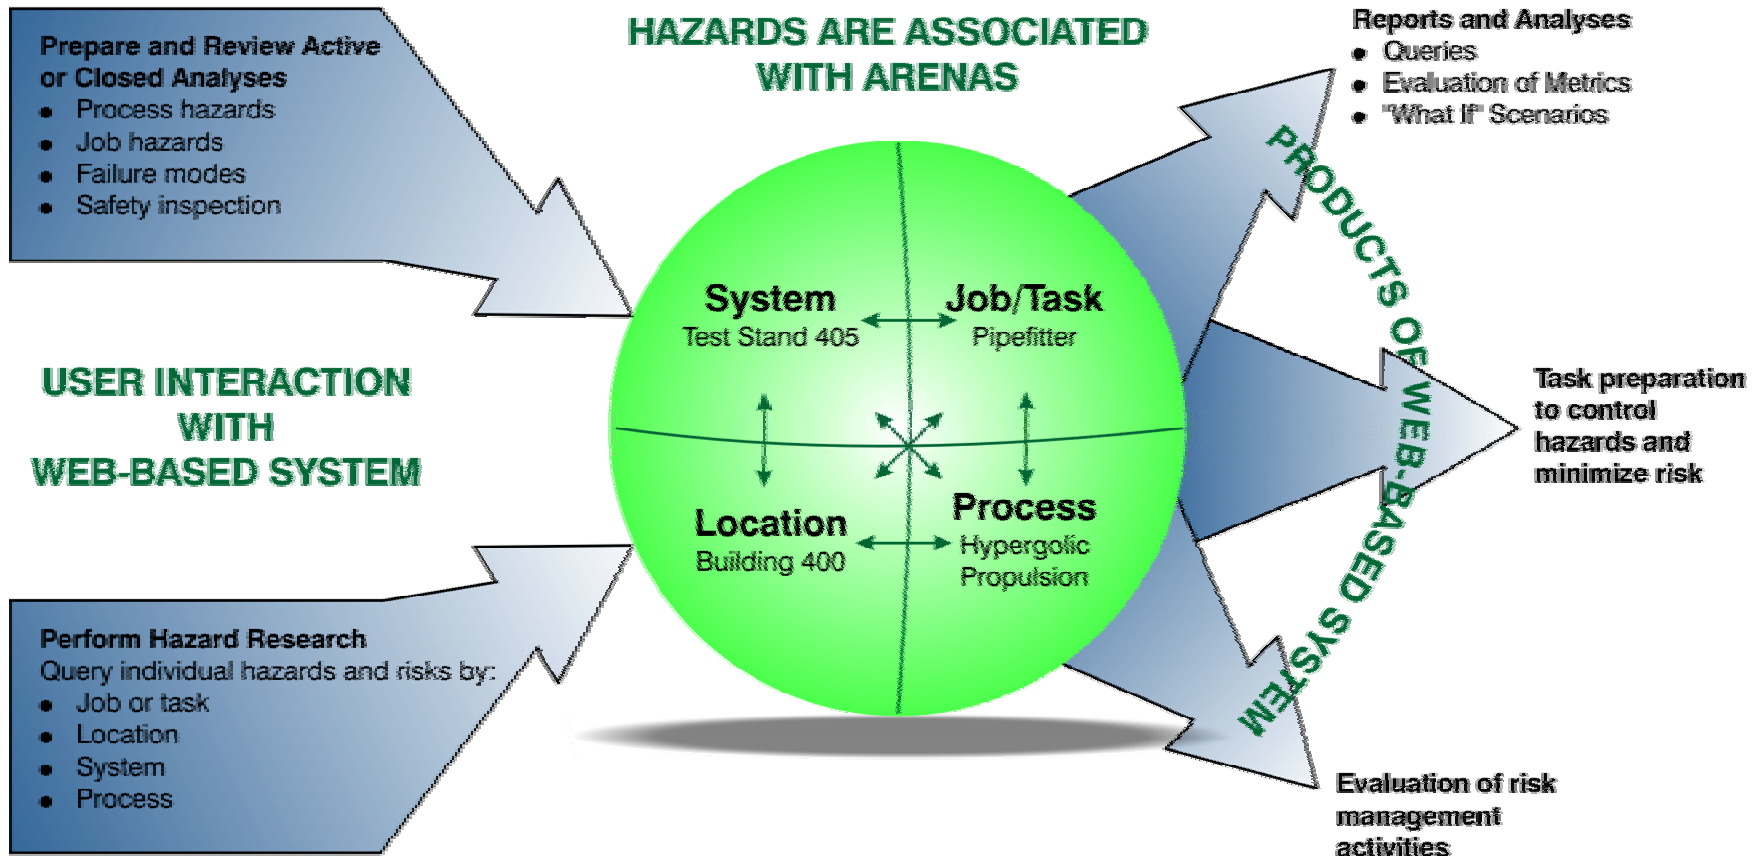

Overview

- **Goals**
 - **Concepts**
 - **Benefits**
- **Business Model – The Theory**
- **Hazard Management System – The Application**

Hazard Management Business Model

User Interface Requirements

- **Manage the creation of hazard documentation**
- **Disseminate hazard information effectively**
- **Analyze hazards and risks**

Meeting the Requirements

- **Documenting Hazards**
 - **HSE performing an inspection**
- **Searching for Hazards**
 - **Boiler Operator dispatched to unfamiliar location**
- **Evaluating the Impact of updated Controls**
 - **Calculate the HCM I at Area 400**

Hazards of Concern to Me 

I want to know the hazards related to:

I want to find hazards related to this job:

Show hazards for this task:

I want to find hazards related to this location:

Also show hazards that apply to the broader location (For instance, if you select 'Test Stand 400' and check this box, you also get hazards for Area 400.)

Hazards Associated with Your Selections

Order hazards by

| Hazard | Cause | Results | Controls |
|--|----------------------------------|-------------------------------|---|
| Hazards Associated with Pond water sampling/testing | | | |
| Water Testing Reagents | Water Testing Reagents | Personnel injury | Gloves, eye protection, splash aprons shall be worn while testing boiler/DK water, know the locations of the nearest EEWSS stations, attend training on the proper water sampling procedures as described in VCI PROP-ALT-0033 by a certified boiler technician, review the MSDS of the chemicals used, wash any areas on personnel that have come into contact with the chemicals |
| Water Treatment Chemicals | Water Treatment Chemicals | Personnel injury | Gloves, eye protection, splash aprons shall be worn while testing boiler/DK water, know the locations of the nearest EEWSS stations, attend training on the proper water sampling procedures as described in VCI PROP-ALT-0033 by a certified boiler technician, review the MSDS of the chemicals used, wash any areas on personnel that have come into contact with the chemicals, review mixing procedure as described in WJI PROP-ALT-0146 and WJI PROP-ALT-0148 |
| Propellant combustion products | Propellant combustion products | Personnel injury | Gloves, eye protection, splash aprons shall be worn while testing pond water, know the locations of the nearest EEWSS stations, attend training on the proper water sampling procedures as described in VCI PROP-ALT-0150 by a certified boiler technician, receive briefing from Environmental Department on chemicals present in the pond and for emergency procedures, wash any areas on personnel that have come into contact with the chemicals |
| Waterborne hazards | Waterborne hazards | Personnel injury | Gloves, eye protection, splash aprons shall be worn while testing pond water, know the locations of the nearest EEWSS stations, attend training on the proper water sampling procedures as described in VCI PROP-ALT-0150 by a certified boiler technician, receive briefing from Environmental Department on chemicals present in the pond and for emergency procedures, wash any areas on personnel that have come into contact with the chemicals, call Environmental Department to retrieve any animals from the pond |
| Drowning | Drowning | Personnel injury | A gated fence is in place around the pond to help prevent accidental drowning, harnesses/lanyards, suspension cables shall be used if access over or around the edge of the pond is required, training shall be provided to personnel working around the pond by the fire department/dispatcher on resuscitating a drowning victim |
| Items Related to Location Area 400 | | | |
| Trip/Fall | Sidewalks are cracked and uneven | Personnel injury from falling | Repair sidewalk |

Hazard Management Business Model

Demonstration Summary/Q&A

- **Key Concepts**
- **Benefits – Are they transferable?**
- **Are your hazard documentation processes consistent with the model?**
- **Do you have data to populate the model?**

What we got...Products

- **Construction and activation of the web-based system.**
- **Diminished dependence on paper documents.**
- **Enhanced availability of hazard information for training, awareness, and controls maintenance.**
- **Consistent identification of hazards, and incorporation of causes and effects, as well as consistent action assignments.**

What we want

Beta Release Necessities

- Usability Testing of Alpha**
- Development Meetings w/ Centers**
- Beta Development, Testing, & Rollout**
- 508 Compliance Review**
- On-Line Help and User's Guide**
- Develop User Training Materials**

Develop Connections with Other Databases (e.g., IRMA and IRIS)

Advanced Analysis Features

- Metrics Development & Implementation**
- Visualization (e.g., Charts, GIS)**
- Advanced Reporting**

Center Training, Data Collection, & Implementation
