The U.S. Army Environmental Command (USAEC) has prepared the *Guide to ESOH Preparation for an ASARC Review*. The guide will assist Army program offices and their environmental support personnel in Environment, Safety and Occupational Health (ESOH) data collection and review, as part of a program's preparation for an Army Systems Acquisition Review Council (ASARC) review.

PURPOSE AND CONTENT

The document provides a methodology that uses a program's ESOH constituency to assist with ASARC ESOH preparation. It relies on a proactive approach of early identification of ESOH issues of all interested parties; early definition and agreement on all substantial ASARC ESOH activities and documentation requirements; and involvement and commitment of the interested parties in resolution of issues identified by the Programmatic Environment, Safety, and Occupational Health Evaluation (PESHE).

This guide is designed to assist a program/project/product manager (PM) and his/her staff prepare for the ESOH portion of ASARC reviews. Acquisition programs vary greatly in complexity, consequently, a "one-size-fits-all" approach to the ESOH aspects of an ASARC review is inappropriate and may not yield satisfactory results.

The guide is divided into six key chapters:

- Introduction
- Materiel Acquisition Life-Cycle Activities and the ASARC Process
- Summary of ESOH Requirements
- A Methodology for ESOH Preparation for an ASARC Review
- ASARC Review Process
- ASARC ESOH Questions
