### I. STANDARD CONDITIONS

### A. Administrative Requirements

The permit holder shall comply with all applicable requirements in the following regulations:

BAAQMD Regulation 1 - General Provisions and Definitions

(as amended by the District Board on 5/2/01);

SIP Regulation 1 - General Provisions and Definitions

(as approved by EPA through 10/7/98);

BAAQMD Regulation 2, Rule 1 - Permits, General Requirements

(as amended by the District Board on 8/1/01);

SIP Regulation 2, Rule 1 - Permits, General Requirements

(as approved by EPA through 11/1/89);

BAAQMD Regulation 2, Rule 2 - Permits, New Source Review

(as amended by the District Board on 5/17/00);

SIP Regulation 2, Rule 2 - Permits, New Source Review and Prevention of Significant Deterioration

(as approved by EPA through 6/15/94);

BAAQMD Regulation 2, Rule 4 - Permits, Emissions Banking

(as amended by the District Board on 5/17/00);

SIP Regulation 2, Rule 4 - Permits, Emissions Banking

(as approved by EPA through 6/15/94)

BAAQMD Regulation 2, Rule 6 - Permits, Major Facility Review

(as amended by the District Board on 5/2/01) And

SIP Regulation 2, Rule 6 – Permits, Major Facility Review

#### B. Conditions to Implement Regulation 2, Rule 6, Major Facility Review

- 1. This Major Facility Review Permit was issued on December 1, 2003, and expires on November 30, 2008. The permit holder shall submit a complete application for renewal of this Major Facility Review Permit no later than May 31, 2008 and no earlier than November 30, 2007. **If a complete application for renewal has not been submitted in accordance with this deadline, the facility may not operate after** November 30, 2008. (Regulation 2-6-307, 404.2, & 409.6; MOP Volume II, Part 3, §4.2)
- 2. The permit holder shall comply with all conditions of this permit. The permit consists of this document and all appendices. Any non-compliance with the terms and conditions of this permit will constitute a violation of the law and will be grounds for enforcement action; permit termination, revocation and re-issuance, or modification; or denial of a permit renewal application. (Regulation 2-6-307; MOP Volume II, Part 3, §4.11)
- 3. In the event any enforcement action is brought as a result of a violation of any term or condition of this permit, the fact that it would have been necessary for the permittee to halt or reduce the permitted activity in order to maintain compliance with such term or condition shall not be a defense to such enforcement action. (MOP Volume II, Part 3, §4.11)
- 4. This permit may be modified, revoked, reopened and reissued, or terminated for cause. (Regulation 2-6-307, 409.8, 415; MOP Volume II, Part 3, §4.11)

#### I. Standard Conditions

5. The filing of a request by the facility for a permit modification, revocation and reissuance, or termination, or the filing of a notification of planned changes or anticipated non-compliance does not stay the applicability of any permit condition. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)

- 6. This permit does not convey any property rights of any sort, or any exclusive privilege. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
- 7. The permit holder shall supply within 30 days any information that the District requests in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. (Regulation 1-441, Regulation 2-6-409.4 & 501; MOP Volume II, Part 3, §4.11)
- 8. Any records required to be maintained pursuant to this permit which the permittee considers to contain proprietary or trade secret information shall be prominently designated as such. Copies of any such proprietary or trade secret information which are provided to the District shall be maintained by the District in a locked confidential file, provided, however, that requests from the public for the review of any such information shall be handled in accordance with the District's procedures set forth in Section 11 of the District's Administrative Code. (Regulation 2-6-419; MOP Volume II, Part 3, §4.11)
- 9. Proprietary or trade secret information provided to EPA will be subject to the requirements of 40 CFR Part 2, Subpart B Public Information, Confidentiality of Business Information. (40 CFR Part 2)
- 10. The emissions inventory submitted with the application for this Major Facility Review Permit is an estimate of actual emissions or the potential to emit for the time period stated and is included only as one means of determining applicable requirements for emission sources. It does not establish, or constitute a basis for establishing, any new emission limitations. (MOP Volume II, Part 3, §4.11)
- 11. The responsible official shall certify all documents submitted by the facility pursuant to the major facility review permit. The certification shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. The certifications shall be signed by a responsible official for the facility.
- 12. The permit holder is responsible for compliance, and certification of compliance, with all conditions of the permit, regardless whether it acts through employees, agents, contractors, or subcontractors. (Regulation 2-6-307)

#### C. Requirement to Pay Fees

The permit holder shall pay annual fees in accordance with District Regulation 3, including Schedule P. (Regulation 2-6-402 & 409.13, Regulation 3; MOP Volume II, Part 3, §4.12)

#### D. Inspection and Entry

Access to Facility: The permit holder shall provide reasonable access to the facility and equipment which is subject to this permit to the APCO and/or to his or her designee. (Regulation 1-440, Regulation 2-6-409.3; MOP Volume II, Part 3, §4.14)

#### I. Standard Conditions

#### E. Records

- 1. The permit holder must provide any information, records, and reports requested or specified by the APCO. (Regulation 1-441, Regulation 2-6-409.4)
- 2. Notwithstanding the specific wording in any requirement, all records for federally enforceable requirements shall be maintained for at least five years from the date of creation of the record. (Regulation 2-6-501, Regulation 3; MOP Volume II, Part 3, §4.7)

#### F. Monitoring Reports

Reports of all required monitoring must be submitted to the District at least once every six months, except where an applicable requirement specifies more frequent reporting. The first reporting period for this permit shall be December 1, 2003, to May 31, 2004. The second reporting period for this permit shall be June 1, 2004, to June 30, 2004. Subsequent reports shall be for the following periods: July 1st through December 31st and January 1st through June 30th. All reports are due on the last day of the month after the end of the reporting period. All instances of non-compliance shall be clearly identified in these reports. The reports shall be certified by the responsible official as true, accurate, and complete. In addition, all instances of non-compliance with the permit shall be reported in writing to the District's Compliance and Enforcement Division within 10 calendar days of the discovery of the incident. Within 30 calendar days of the discovery of any incident of non-compliance, the facility shall submit a written report including the probable cause of non-compliance and any corrective or preventative actions. The reports shall be sent to the following address:

Director of Compliance and Enforcement Bay Area Air Quality Management District 939 Ellis Street San Francisco, CA 94109 Attn: Title V Reports

(Regulation 2-6-502, Regulation 3; MOP Volume II, Part 3, §4.7)

#### **G.** Compliance Certification

Compliance certifications shall be submitted annually by the responsible official of this facility to the Bay Area Air Quality Management District and to the Environmental Protection Agency. The first certification period shall be December 1, 2003, to November 30, 2004. The second certification period shall be December 1, 2004, to December 31, 2004. Subsequent certification periods will be January 1st to December 31st. All compliance certifications are due on the last day of the month after the end of the certification period. The certification must list each applicable requirement, the compliance status, whether compliance was continuous or intermittent, the method used to determine compliance, and any other specific information required by the permit. The permit holder may satisfy this requirement through submittal of District-generated Compliance Certification forms. The certification should be directed to the District's Compliance and Enforcement Division at the address above, and a copy of the certification shall be sent to the Environmental Protection Agency at the following address:

Director of the Air Division

#### I. Standard Conditions

USEPA, Region IX 75 Hawthorne Street San Francisco, CA 94105 Attention: Air-3

(MOP Volume II, Part 3, §4.5 and 4.15)

#### **H.** Emergency Provisions

- 1. The permit holder may seek relief from enforcement action in the event of a breakdown, as defined by Regulation 1-208 of the District's Rules and Regulations, by following the procedures contained in Regulations 1-431 and 1-432. The District will thereafter determine whether breakdown relief will be granted in accordance with Regulation 1-433. (MOP Volume II, Part 3, §4.8)
- 2. The permit holder may seek relief from enforcement action for a violation of any of the terms and conditions of this permit by applying to the District's Hearing Board for a variance pursuant to Health and Safety Code Section 42350. The Hearing Board will determine after notice and hearing whether variance relief should be granted in accordance with the procedures and standards set forth in Health and Safety Code Section 42350 et seq. (MOP Volume II, Part 3, §4.8)
- 3. The granting by the District of breakdown relief or the issuance by the Hearing Board of a variance will not provide relief from federal enforcement. (MOP Volume II, Part 3, §4.8)

#### I. Severability

In the event that any provision of this permit is invalidated by a court or tribunal of competent jurisdiction, or by the Administrator of the EPA, all remaining portions of the permit shall remain in full force and effect. (Regulation 2-6-409.5; MOP Volume II, Part 3, §4.10)

#### J. Miscellaneous Conditions

- 1. In Table II-A, for each source with a capacity identified as a firm limit, the maximum capacity for each source as shown in Table II-A is the maximum allowable capacity. Exceedance of the maximum allowable capacity for any source is a violation of Regulation 2, Rule 1, Section 301. (Regulation 2-1-301)
- 2. In Table II-A, for each source with a capacity identified as a grandfathered limit, all capacities as shown in Table II-A is based upon District records at the time of the MFR permit issuance. The facility must report any exceedance of these limits following the procedures in Section I.F. This reporting requirement is intended to facilitate a determination of whether a modification has occurred as defined in Regulation 2-1-234.3. The throughput limits for grandfathered sources are for reporting purposes only. Exceedance of this limit does not establish a presumption that a modification has occurred, nor does compliance with the limit establish a presumption that a modification has not occurred. (Regulation 2-1-234.3)
- 3. Reserved.
- 4. Where an applicable requirement allows multiple compliance options and where more than one such option is incorporated into the permit, the permit holder must maintain records indicating the selected compliance option. Such records at a minimum shall indicate when any change in options has occurred. In addition, the

#### I. Standard Conditions

annual compliance certification must specifically indicate which option or options were selected during the certification period. This is in addition to any recordkeeping and reporting contained in the requirement itself.

- 5. The District intends to make a determination regarding the applicability of 40 CFR Part 63, Subpart CC to certain flares on or before February 15, 2005. Any information the permit holder believes should be considered by the District regarding this determination must be submitted by January 5, 2005. This permit condition is not intended to limit the District's authority to request information. Deleted. The District addressed the applicability of 40 CFR 63, Subpart CC to certain flares in Item #1 of the February 15, 2005 letter to Deborah Jordan.
- 6. Deleted. The District addressed the applicability of Regulation 8, Rule 2 to certain cooling towers in Item #4 of the February 15, 2005 letter to Deborah Jordan. The District intends to make a determination regarding the applicability of Regulation 8, Rule 2 to certain cooling towers on or before February 15, 2005. Any information the permit holder believes should be considered by the District regarding this determination must be submitted by January 5, 2005. This permit condition is not intended to limit the District's authority to request information.
- 7. Deleted. The District addressed the applicability of 40 CFR 61, Subpart QQQ to certain wastewater treatment sources in Item #9 of the February 15, 2005 letter to Deborah Jordan, and in the Revision 2 Statement of Basis. The District intends to make a determination regarding the applicability of 40 CFR Part 61, Subpart QQQ to certain wastewater treatment sources on or before February 15, 2005. Any information the permit holder believes should be considered by the District regarding this determination must be submitted by January 5, 2005. This permit condition is not intended to limit the District's authority to request information.
- 8. Deleted. The District addressed the applicability of 40 CFR 63, Subpart FF to certain waste streams in Item #11 of the February 15, 2005 letter to Deborah Jordan, and in the Revision 2 Statement of Basis. The District intends to make a determination regarding the applicability of 40 CFR Part 63, Subpart FF to certain waste streams on or before February 15, 2005. Any information the permit holder believes should be considered by the District regarding this determination must be submitted by January 5, 2005. This permit condition is not intended to limit the District's authority to request information. B2626A-2eTables.DOC
- 9. Deleted. The District addressed the ESP monitoring to assure compliance with SIP particulate standards in Item #13 of the February 15, 2005 letter to Deborah Jordan, and in the Revision 2 Statement of Basis. The District intends to make a determination regarding monitoring to assure compliance with SIP particulate standards for ESPs on or before February 15, 2005. Any information the permit holder believes should be considered by the District regarding this determination must be submitted by January 5, 2005. This permit condition is not intended to limit the District's authority to request information.

#### K. Accidental Release

This facility is subject to 40 CFR Part 68, Chemical Accident Prevention Provisions. The permit holder shall submit a risk management plan (RMP) by the date specified in §68.10. The permit holder shall also certify compliance with the requirements of Part 68 as part of the annual compliance certification, as required by Regulation 2, Rule 6. (40 CFR Part 68, Regulation 2, Rule 6)

### **Table II A - Permitted Sources**

Each of the following sources has been issued a permit to operate pursuant to the requirements of BAAQMD Regulation 2, Permits. The capacities in this table are the maximum allowable capacities pursuant to 2-1-301. Throughput limits for grandfathered sources function as reporting thresholds as described in Standard Condition J.

S-#	Description	Make or Type	Model	Capacity	Throughput
S-1032	Combustion Turbine Generator	General Electric	LM 6000	500 MMBTU/hour	6,3541,000
	(Refinery Fuel Gas and/or Natural Gas				MMBTU/year
	Fired)				(combined S-1032 &
					S-1033)
					(New Source Review)
S-1033	Heat Recovery Steam Generator	N/A	Duct Burner	310 MMBTU/hour	6,3 <b>5</b> 41,000
			Supplemental		MMBTU/year
			Firing System		(combined S-1032 &
					S-1033)
					(New Source Review)

### **Table II B - Exempt Sources**

Each of the following sources has been issued an exemption pursuant to the provisions of BAAQMD Regulation 2, Rule 1.

S-#	Description	Make or Type	Model	Capacity	Throughput
S-65	Tank, Vertical Fixed Roof, ALUMSP,	N/A	N/A	5250 kgal	Exempt
	Distillate oil, (TK-1713, RESID)				
S-69	Tank, Vertical Fixed Roof, ALUMSP,	N/A	N/A	5250 kgal	Exempt
	Distillate oil, Gas oil, (TK-1717, RESID)				
S-70	Tank, Vertical Fixed Roof, ALUMSP,	N/A	N/A	5250 kgal	Exempt
	Distillate oil, (TK-1718,RESID)				
S-71	Tank, Vertical Fixed Roof, ALUMSP,	N/A	N/A	15,708 kgal	Exempt
	Distillate oil, (TK-1719, RESID)				
S-93	Tank, Vertical Fixed Roof, GREEN, Fuel -	N/A	N/A	4620 kgal	Exempt-jet fuel
	jet 'A', (TK-1772, JP5)				
S-94	Tank, Vertical Fixed Roof, GREEN, Fuel -	N/A	N/A	1050 kgal	Exempt-jet fuel
	jet 'A', (TK-1773, JP5)				
S-95	Tank, Vertical Fixed Roof, GOLD,	N/A	N/A	3150 kgal	Exempt-distillate
	Distillate oil, (TK-1774, DIESEL)				
S-96	Tank, Vertical Fixed Roof, GOLD,	N/A	N/A	3150 kgal	Exempt-distillate
	Distillate oil, (TK-1775, DIESEL)				
S-98	Tank, Vertical Fixed Roof, WHITE,	N/A	N/A	651 kgal	Exempt-distillate
	Distillate oil, (TK-1777, DIESEL)				

### **Table II B - Exempt Sources**

Each of the following sources has been issued an exemption pursuant to the provisions of BAAQMD Regulation 2, Rule 1.

S-#	Description	Make or Type	Model	Capacity	Throughput
S-99	Tank, Vertical Fixed Roof, GREEN, Fuel - jet 'A', (TK-1778, ETFA)	N/A	N/A	2373 kgal	Exempt-jet
S-100	Tank, Vertical Fixed Roof, GREEN, Fuel - jet 'A', (TK-1779, ETF-A)	N/A	N/A	2373 kgal	Exempt-jet
S-107	Tank, Vertical Fixed Roof, GOLD, Distillate oil, (TK-1798, DIESEL (FUEL OIL))	N/A	N/A	4410 kgal	Exempt-distillate
S-109	Tank, Vertical Fixed Roof, GOLD, Organic liquid -other/not spec, (TK-1802, GASOLINE ANTI-OXIDANT)	N/A	N/A	16,800 gal	Exempt-additive
S-116	Tank, Vertical Fixed Roof, GOLD, Organic liquid -other/not spec, (TK-1809, PETROX)	N/A	N/A	39 kgal	Exempt-additive
S-118	Tank, Vertical Fixed Roof, GOLD, Organic liquid -other/not spec, (TK-1811, AO33)	N/A	N/A	17 kgal	Exempt-additive
S-119	Tank, Vertical Fixed Roof, GOLD, Organic liquid -other/not spec, (TK-1812, ANTI-ICE)	N/A	N/A	16,800 gal	Exempt-additive
S-121	Tank, Vertical Fixed Roof, GOLD, Organic liquid -other/not spec, (D-807, POLYSULFIDE DRUM)	N/A	N/A	6468 gal	Exempt-additive
S-123	Tank, Vertical Fixed Roof, GOLD, (TK-1794,) Diesel Red Dye	N/A	N/A	8400 gal	Exempt
S-127	Loading, Motor Vehicle, Motor Vehicle Refueling Station, 1 Loading Arms (Total) and 0 Loading Arms (Gasoline), Distillate oil, Bottom/Submerged fill (DIESEL DISPENSER, SERVICES BLDG AREA)	Gilbarco Loading Arm	625-100		Exempt-distillate
S-140	Tank, Vertical Fixed Roof, YELLOW, Alcohol - amine, (TK 1204, MEA INVENTORY)	N/A	N/A	10600 gal	Exempt-additive
S-142	Tank, Vertical Fixed Roof, YELLOW, Hydrocarbon – mixtures, other/not spec, (TK-103, Demulsifier Tank)	N/A	N/A	7 kgal	Exempt-additive
<del>S-144</del>	Tank, Pseudo fixed roof tank, SILVER, Hydrocarbon - mixtures, other/not spec, (TK 5013, Neutralizing Amine (Pipestill))	<del>N/A</del>	<del>N/A</del>	1500 gal	Exempt-additive

#### **Table II B - Exempt Sources**

Each of the following sources has been issued an exemption pursuant to the provisions of BAAQMD Regulation 2, Rule 1.

S-#	Description	Make or Type	Model	Capacity	Throughput
S-145	Tank, Vertical Fixed Roof, YELLOW, Alcohol - amine, (TK 1201, – MDEA ACCUMULATOR (20% SOLUTION))	N/A	N/A	47 kgal	Exempt-additive
S-185	Tank, Vertical Fixed Roof, UN, Organic liquid -other/not spec, (Cationic Polymer Tank)	N/A	N/A	5 kgal	Exempt
S-192	Other petroleum products; Other, Waste water (TK 2052, Thickener)	N/A	N/A		Exempt-additive
S-201	Loading, Truck, 1 Loading Arm (Total), Waste water, Bottom/Submerged fill (Vacuum Truck Loading from Thickener Tank (S-192))	N/A	N/A		Exempt
S-214	Process drain - w/o controls, Waste water - (BIOX Aerator for Stripped Sour Water)	N/A	N/A		Exempt
S-215	Process drain - w/o controls, Waste water - (BIOX Clarifier for Stripped Sour Water)	N/A	N/A		Exempt
S-217	Tank, Vertical Fixed Roof, BLACK, Refinery sludge, (WWTP Sludge Tank)	N/A	N/A	22 kgal	Exempt
S-218	Tank, Vertical Fixed Roof, BLACK, Refinery sludge, (WWTP Sludge Tank)	N/A	N/A	22 kgal	Exempt
S-219	Tank, Vertical Fixed Roof, BLACK, Refinery sludge, (WWTP Sludge Tank)	N/A	N/A	22 kgal	Exempt
S-238	BIOX Aerator for stripped sour water	N/A	N/A		Exempt
S-1019	Other petroleum products; Other (Laboratory Sample Waste Sinks)	N/A	N/A		Exempt
S-32000	Combustion, Minor Sources, Natural gas (MINOR SOURCES)	N/A	N/A		Pilot gas to combustion devices, excluding flares - Exempt
S-32100	Refinery vacuum products (Fugitive Sources - Vacuum Producing Systems)	N/A	N/A		Exempt
S-32101	Refinery process vessels (Fugitive Sources – Process Vessel Depressurization)	N/A	N/A		Exempt
S-32102	Refinery valves/flanges (Fugitive Sources – Valves and Flanges)	N/A	N/A		Exempt
S-32103	Refinery pumps/compressors (Fugitive Sources - Pumps & Compressor Seals)	N/A	N/A		Exempt
S-32104	Refinery pressure relief valve (Fugitive Sources - Pressure Relief Valves)	N/A	N/A		Exempt

#### **Table II B - Exempt Sources**

Each of the following sources has been issued an exemption pursuant to the provisions of BAAQMD Regulation 2, Rule 1.

S-#	Description	Make or Type	Model	Capacity	Throughput
S-32105	Refinery process drains (Fugitive Sources –	N/A	N/A		Exempt
	Process Drains)				
S-32110	Refinery flaring/blowdown (Process Gas	N/A	N/A		Exempt
	(Combustion) Emissions from Flares and				
	Blowdown Systems)				
S-230	TK-4460 Dowtherm Storage Tank	N/A	N/A		Exempt
S-231	Aqueous Ammonia Storage Drum	N/A	N/A		Exempt
S-244	Tank, Vertical Fixed Roof, YELLOW,	N/A	N/A	5500 gallons	Exempt (Regulation
	<b>Aqueous Cationic Polymer Solution Tank</b>				2-1-123.3.3)
	TK-2317				
S-245	Membrane Filtration Unit	Zenon	ZeeWeed MBR	400 gpm	Exempt (Regulation
					2-1-123.2)
None	TK-1730 Flushing Oil Tank	N/A	N/A		Exempt
None	TK-1721 LPG Sphere	N/A	N/A		Exempt
None	TK-1722 LPG Sphere	N/A	N/A		Exempt
None	TK-1723 LPG Sphere	N/A	N/A		Exempt
None	TK-1724 LPG Sphere	N/A	N/A		Exempt
None	TK-1725 LPG Sphere	N/A	N/A		Exempt
None	TK-1726 Refrigerated Butane Tank	N/A	N/A		Exempt
None	D-3905 A/B Anhydrous Ammonia Drums	N/A	N/A		Exempt
None	LPG Truck Loading Rack	N/A	N/A		Exempt per BAAQMD
					<b>Regulation 2-1-123.3.1</b>
None	Octane Test Engines	N/A	N/A		Exempt
None	Post-BIOX Selenium Removal Facilities	N/A	N/A		Exempt
None	TK-2700 Fresh Caustic Tank	N/A	N/A		Exempt
None	Nitrogen Plant	N/A	N/A		Exempt
None	Assorted Organic Liquid Storage Vessels	N/A	N/A		Exempt
	and Containers Less Than 260 gallons				
None	Assorted Tanks, Vessels, and Pumping	N/A	N/A		Exempt
	Equipment Associated with Aqueous				
	Solutions				
None	Assorted Containers, Tanks, Reserviors and	N/A	N/A		Exempt
	Loading Equipment Associated with Heavy				
	and/or Low Volatility Organic Liquids				
None	TK-2710 Fresh Acid Tank, 98% Sulfuric	N/A	N/A		Exempt per BAAQMD
	Acid				Regulation 2-1-123.2.
None	Cogeneration Plant Cooling Tower	N/A	N/A		Exempt per BAAQMD
					Regulation 2-1-128.4

#### III. GENERALLY APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. These requirements apply in a general manner to the facility and/or to sources exempt from the requirement to obtain a District Permit to Operate. The District has determined that these requirements will not be violated under normal, routine operations, and that no additional periodic monitoring or reporting to demonstrate compliance is warranted. In cases where a requirement, in addition to being generally applicable, is also specifically applicable to one or more sources, the requirement and the source are also included in Section IV, Source-Specific Applicable Requirements, of this permit.

The dates in parenthesis in the Title column identify the versions of the regulations being cited and are, as applicable:

- 1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board of Directors
- 2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full language of SIP requirements is on EPA Region 9's website. The address is included at the end of this permit.

#### NOTE:

There are differences between the current BAAQMD rules and the versions of the rules in the SIP. All sources must comply with <u>both</u> versions of the rule until US EPA has reviewed and approved the District's revision of the regulation.

#### IV. SOURCE-SPECIFIC APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. The requirements cited in the following tables apply in a specific manner to the indicated source(s).

The dates in parenthesis in the Title column identify the versions of the regulations being cited and are, as applicable:

- 1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board
- 2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full text of each permit condition cited is included in Section VI, Permit Conditions, of this permit. The full language of SIP requirements is on EPA Region 9's website. The address is included at the end of this permit. All other text may be found in the regulations themselves

#### Table IV – Refinery Generally Applicable Condition

Applicable Condition	Regulation Title or Description of Requirements	Federally Enforceable (Y/N)	Future Effective Date
BAAQMD Condition # 19466-4	The owner/operator shall notify the District in writing by fax or email no less than three calendar days in advance of any scheduled startup or shutdown of any process unit and as soon as feasible for any unscheduled startup or shutdown of a process unit, but no later than 48 hours or within the next normal business day after the unscheduled startup/shutdown. The notification shall be sent in writing by fax or email to the Director of Enforcement and Compliance. The requirement is not federally enforceable. [Regulation 2-1-403]	N	
NESHAPS Title 40 Part 63 Subpart UUU	National Emission Standards for Hazardous Air Pollutants for Petroleum Refineries: Catalytic Cracking Units, Catalytic Reforming Units, and Sulfur Recovery Units	Y	4/11/2005 9/08/2005
63.1561(a)(1)	Applicable to petroleum refineries located at a major source of HAP emissions	¥	
63.1561(a)(2)	Applicable to a major source of HAPs with potential to emit 10 tpy any single HAP or 25 tpy of any combination of HAPs	¥	
61.1562(a)	Applicable to any new, reconstructed, or existing source at a petroleum refinery	¥	
61.1562(b)	Applicable affected sources include catalytic regenerators, catalytic reforming units, sulfur recovery units, and bypass lines serving affected units	¥	
61.1562(e)	An affected source is existing if it is not new or reconstructed.	¥	
61.1562(f)	Subpart UUU does not apply to:	¥	
61.1562(f)(4)	equipment associated with bypass lines including low leg drains, high point bleed, analyzer vents, open-ended valves or lines, or pressure relief valves needed for safety reasons.	¥	
61.1562(f)(5)	gaseous streams routed to a fuel gas system.	¥	
61.1563(b)	Comply with the emission limitations and work practice standards for existing sources by April 11, 2005.	¥	4/11/2005
61.1562(e)	Meet the notification requirements according to 63.1574 and 40 CFR 60 Part 63 Subpart A.		
BAAQMD Condition #20620			
Part 1	Requirement to apply to incorporate 40 CFR 63, Subpart UUU (40 CFR 63, Subpart UUU)	N	10/11/04
Part 2	Requirement to submit startup, shutdown, and maintenance plan for catalytic eracking units, catalytic reforming units, and sulfur recovery plants (40 CFR 63.1574(f))	¥	4/11/05

BAAQMD Condition #125			
Part 1	Reasonable access to 24 hour sulfur production data shall be provided whenever the APCO or his designated representative performs compliance determination on the Sulfur Recovery Unit (SRU), Tail Gas Cleanup Unit and main stack. [Basis Banked POC credits]	Y	
Part 2	The Owner/Operator shall operate and maintain the best available H2S monitoring system on the Tail Gas Clean-up Unit exhaust stack. [Basis: 9-1-313.2, odors]	Y	
Part 3	Except during upset conditions, the motor operated valve (MOV-001), which allows Tail Gas from S-1 to flow to the incinerator (F-1302A; A-14), shall not be open when either of the sour gas feed valves (F002, F004) to source (S-1) are open. A closed block valve or blind in the pertinent lines shall be considered sufficient to fulfill this requirement. [Basis: 9-1-313.2, odors]	Y	
Part 4	Except during upset condtions, the Owner/Operator shall route and clean the tail gases from the S-1 Sulfur Recovery Unit to the Beavon and Flexsorb SE Tail Gas Treatment Units (A-24, A-64 and A-56). The Owner/Operator shall return the recovered hydrogen sulfide to the S-1 and/or S-2 SRU for recovery as elemental sulfur. [Basis: Regulation 9-1-313.2, odors]	Y	

# Table IV - A1 Source-Specific Applicable Requirements Sulfur Plant, Related Sources S-1 (F-1301A, NAT. GAS)

Applicable Condition	Regulation Title or Description of Requirement	Federally Enforceab le (Y/N)	Future Effective Date
BAAQMD Condtion #19466			
Part 1	The Permit Holder shall conduct an annual District approved source test on the S-1 and S-2 Claus Units to demonstrate that 95% of the H2S in the refinery fuel gas is removed and recovered on a refinery wide basis and 95% of the H2S in the process water streams is removed and recovered on a refinery wide basis AND 95% of the ammonia in the process water stream is removed. The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 30 days after the test. The test shall include sampling of the inlet and outlet of the fuel gas scrubber and sour water stripper towers. [Basis: Regulation 9-1-313.2]	¥	4/1/04
Part 3	The Owner/Operator shall monitor and record on a monthly basis the visible emissions from Sources S-1, S-2, S-8, S-10, S-11, S-12, S-160, S-176, S-233 and S-237 to demonstrate compliance with Regulation 6-301 (Ringlemann 1 or 0% opacity). These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [ Basis: Regulation 6-301]	Y	4/01/04
Part 8	The Permit Holder shall perform annually a source test on S-1 and S-2 to determine compliance with Regulation 6-330 (Outlet grain loading not to exceed 0.08 grain/dscf of SO3 and H2SO4). The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit ServicesDivision no less than 30-45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-330]	Y	4/01/04

<del>63.1568(b)</del>	Initial Compliance Demonstration with Emission Limitations and Work Practice Standards	¥	4/11/05
<del>63.1568(b)(1)</del>	Install Continuous Monitoring System to measure and record hourly average concentration of reduced sulfur and O2 emissions.  Calculate reduced sulfur emissions as SO2, dry basis, at 0% O2 (Option 1).	¥	4/11/05
<del>63.1568(b)(2)</del>	Performance Test: measure concentration of reduced sulfur for a reduction control system without incineration (Option 1), by collecting monitoring data every 15 minutes for 24 consecutive hours.	¥	9/8/05
63.1568(b)(3)	Establish Site Specific Operating Limits.	¥	9/8/05
<del>63.1568(b)(4)</del>	Correct reduced sulfur samples to zero percent O2 with specified equation.	¥	4/11/05
<del>63.1568(b)(5)</del>	Demonstrate Initial Compliance with the 300 ppmvd reduced sulfur limit calculated as SO2 at zero percent O2 by monitoring the hourly average total reduced sulfur emissions over a 24-hour period (Option 1).	¥	<del>-9/8/05</del>
<del>63.1568(b)(6)</del>	Demonstrate Initial Compliance with Work Practice Standard by submitting Operation, Maintenance, and Monitoring Plan as part of the Notification of Compliance Status report.	¥	5/11/05
63.1568(b)(7)	Submit Notice of Initial Compliance Status cotaining the results of the initial compliance demonstration.	¥	5/11/05
<del>63.1568(e)</del>	Continuous Compliance Demonstration with emission limitation and work practice standards	¥	
<del>63.1568(e)(1)</del>	Demonstrate Continuous Compliance with Emission Limitation: maintain 300 ppmvd reduced sulfur emissions calculated as SO2 at zero percent O2 (Option 1) and collect hourly average TRS monitoring data.	¥	4/11/05
63.1568(c)(2)	Demonstrate Continuous Compliance with Work Practice Standard through maintaining records to document conformance with the Operation, Maintenance, and Monitoring Plan	¥	4/11/05
63.1569	Requirements for HAP Emissions from Bypass Lines	¥	4/11/05
63.1569(a)(1)	Meet work practice standards for bypass lines by selecting one of four options.	¥	4/11/05

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
<del>63.1569(a)(1)(i)</del>	Install an automated system in the bypass line (Option 1)	¥	4/11/05
63.1569(a)(2)	EPA may grant permission to use alternate bypass lines to those specified.		
<del>63.1569(a)(3)</del>	Prepare an Operations, Maintenance, and Operating Plan, and operate at all times in accordance with the Plan.	¥	4/11/05
<del>63.1569(b)</del>	Initial Compliance Demonstration with work practice standards	¥	4/11/05
<del>63.1569(b)(1)</del>	Conduct performance test for automated bypass line (Option 1)	¥	<del>5/11/05</del>
<del>63.1569(b)(2)</del>	Demonstrate initial compliance with work practice standard for bypass line with automated system (Option 1).	¥	4/11/05
<del>63.1569(b)(3)</del>	Demonstrate initial compliance with the work practice standard for automated bypass lines (Option 1) by submitting an Operations, Maintenance, and Monitoring Plan as part of the Notification of Compliance Status report.	¥	5/11/05
<del>63.1569(b)(4)</del>	Submit the Notification of Compliance Status containing the results of the initial compliance demonstration.	¥	5/11/05
<del>63.1569(c)</del>	Demonstrate continuous compliance with the work practice standards for bypass lines.	¥	4/11/05
<del>63.1569(e)(1)</del>	Demonstrate continuous compliance with the work practice standards for automated bypass lines by continuously monitoring and recording whether flow is present in the bypass line, and recording whether the device is operating properly.	¥	4/11/05
63.1569(c)(2)	Demonstrate continuous compliance with the work practice standard for automated bypass lines by complying with the Operation, Maintenance, and Monitoring Plan.	¥	4/11/05
<del>63.1570</del>	General Compliance Requirements	¥	4/11/05
<del>63.1570(a)</del>	Operate in compliance with non-opacity standards at all times except during periods of startup, shutdown, and malfunction, as specified in 63.6(f)(1)	¥	4/11/05
<del>63.1570(c)</del>	Operate and maintain source including pollution control and monitoring equipment in accordance with 63.6(e)(1). Between 4/11/05 and the date continuous monitoring systems are installed and validated and operating limits have been set, maintain a log detailing operation and maintenance of process and equipment.	¥	4/11/05
<del>63.1570(d)</del>	Develop and implement startup, shutdown, and malfunction plan (SSMP) in accordance with 63.6(e)(3)	¥	4/11/05

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
<del>63.1570(e)</del>	Operate in accordance with SSMP during periods of startup, shutdown, and malfunction	¥	4/11/05
63.1570(f)	Report deviations from compliance with this subpart according to the requirements of 63.1575	¥	4/11/05
63.1570(g)	Deviations that occur during startup, shutdown, or malfunction are not violations if operating in accordance with SSMP	¥	4/11/05
63.1571	Performance Tests	¥	4/11/05
63.1571(a)	Conduct Performance Test and submit results no later than 150 days after compliance date	¥	9/8/05
63.1571(a)(1)	For emission limitation or work practice standard where compliance is not demonstrated using performance test, opacity observation, or visible emission observation, conduct initial compliance demonstration within 30 days after compliance date	¥	<del>5/11/05</del>
<del>63.1571(b)</del>	Requirements for Performance Tests	¥	
63.1571(b)(1)	Conduct performance tests in accordance with the requirements of 63.7(e)(1)	¥	9/8/05
<del>63.1571(b)(2)</del>	Except for opacity and visual emissions observations, conduct three separate test runs of at least an hour for each performance test	¥	9/8/05
63.1571(b)(3)	Conduct each performance evaluation in accordance with the requirements of 63.8(e)	¥	9/8/05
63.1571(b)(4)	Do not conduct performance tests during periods of startup, shutdown, or malfunction	¥	9/8/05
63.1571(b)(5)	Arithmetic average of emission rates	¥	9/8/05
63.1571(d)(4)	Adjust process or control device measured values when establishing operating limits for continuous parametric monitoring systems (optional).	¥	9/8/05
<del>63.1571(e)</del>	Changes to Operating limits for continuous parametric monitoring systems (optional)	¥	9/8/05
63.1572	Monitoring installation, operation, and maintenance requirements	¥	4/11/05
<del>63.1572(a)</del>	Monitoring installation, operation, and maintenance requirements for continuous emission monitoring systems.	¥	4/11/05
<del>63.1572(d)</del>	Data monitoring and collection requirements	¥	4/11/05
63.1572(d)(1)	Conduct monitoring at all times source is operating except for monitoring malfunctions, repairs, and QA/QC activities	¥	4/11/05

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
63.1572(d)(2)	Not use data recorded during monitoring malfunctions, repairs, and QA/QC activities	¥	4/11/05
63.1573	Monitoring Alternatives	¥	4/11/05
<del>63.1573(e)</del>	Automated data compression system (optional)	¥	4/11/05
<del>63.1573(d)</del>	Monitoring for alternative parameters (optional)	¥	4/11/05
63.1573(e)	Alternative Monitoring Requests (optional)	¥	4/11/05
63.1574	Notification Requirements	¥	4/11/05
63.1574(a)	Notifications Required by Subpart A	¥	5/11/05 and subsequent
63.1574(a)(2)	Submit notification of intent to conduct performance test 30 days	¥	<del>30 days</del>
	before scheduled (instead of 60 days)		<del>before test</del>
63.1574(a)(3)	Notification of Compliance Status	¥	
63.1574(a)(3)(i)	Submit Notification of Compliance Status for initial compliance	¥	<del>5/11/05</del>
	demonstration that does not include a performance test, no later		
	than 30 days following completion of initial compliance		
	demonstration		
63.1574(a)(3)(ii)	Submit Notification of Compliance Status for initial compliance	¥	9/8/05
	demonstration that includes a performance test, no later than 150		
	days after source compliance date		
<del>63.1574(d)</del>	Information to be Submitted in Notice of Compliance Status	¥	<del>5/11/05</del>
	(Table 42): identification of affected sources and emission points		
	(Item 1); initial compliance demonstration (Item 2); continuous		
	compliance (Item 3)		
<del>63.1574(f)</del>	Requirement to prepare Operation, Maintenance, and Monitoring Plan	¥	
63.1574(f)(1)	Submit plan to permitting authority for review and approval	¥	5/11/05
	along with NOCS. Include duty to prepare and implement plan		
	into Part 70 or 71 permit.		
63.1574(f)(2)	Minimum contents of Operation, Maintenance, and Monitoring	¥	5/11/05
	Plan		
63.1575	Reports	¥	7/31/05
63.1575(a)	Required reports: Statement that there were no deviations or	¥	7/31/05
	report including information in 1575(d) or (e) (Table 43, Item 1)		
<del>63.1575(b)</del>	Specified semiannual report submittal dates	¥	7/31/05

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
BAAQMD · Regulation 6	Particulate Matter and Visible Emissions (12/19/1990)		
6-301	Ringelmann No. 1 Limitation	Y	
6-310	Particulate Weight Limitation	Y	
6-330	Sulfur Recovery Units (SO3, H2SO4 Emission Limitation)	Y	
BAAQMD · Regulation 9 Rule	Inorganic Gaseous Pollutants, Sulfur Dioxide Emissions Limitations (3/15/1995)		
9-1-307	Emission Limitations for Sulfur Recovery Plants	Y	
9-1-313	Sulfur Removal Operations at Petroleum Refineries (processing more than 20,000 bbl/day f crude oil)	N	
9-1-313.2	Sulfur Removal Operations at Petroleum Refineries (processing more than 20,000 bbl/day of crude oil)	N	
SIP Rule 1 Regulation 9	Inorganic Gaseous Pollutants, Sulfur Dioxide Emissions Limitations (05/20/1992)	N	
9-1-313	Sulfur Removal Operation at Petroleum Refineries (processing more than 20,000 bbl/day of crude oil)	Y	
9-1-313.2	Sulfur Removal Operations at Petroleum Refineries	Y	
BAAQMD · Regulation 9 Rule 10	NOx and CO from Petroleum Refinery Boilers, Steam Generators, & Process Heaters (07/17/2002)		
9-10-110.4	Exemptions: Sulfur Recovery Plants and Tail Gas Treating Units	Y	
BAAQMD Condition # 126			
Part 1	Reasonable access to 24 hour sulfur production data shall be provided whenever the APCO or his designated representative performs Compliance determination on the Sulfur Recovery Unit (SRU), Tail Gas Clean-up Unit and main stack. [Basis: 9-1-313.2]	Y	
Part 2	The Owner/Operator shall operate and maintain the best available H2S monitoring system on the Tail Gas Clean-up Unit exhaust stack.  [Basis: 9-1-313.2, odors]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 3	Except during upset conditions, the motor operated valve (MOV-003), which allows Tail Gas from S-2 to flow to the incinerator (F-1302B; A-15), shall not be open when either of the sour gas feed valves (F052, F054) to source (S-2) are open. A closed block valve or blind in the pertinent lines shall be considered sufficient to fulfill this requirement. [Basis: 9-1-313.2]	Y	
Part 4  BAAQMD	Except during upset conditions, the Owner/Operator shall route and clean the tail gases from the S-1 Sulfur Recovery Unit to the Beavon and Flexsorb SE Tail Gas Treatment Units (A-24, A-64 and A-56). The Owner/Operator shall return the recovered hydrogen sulfide to the S-1 and/or S-2 SRU for recovery as elemental sulfur.	Y	
Conditon #19466			
Part 1	The Permit Holder shall conduct an annual District approved source test on the S-1 and S-2 Claus Units to demonstrate that 95% of the H2S in the refinery fuel gas is removed and recovered on a refinery wide basis and 95% of the H2S in the process water streams is removed and recovered on a refinery wide basis AND 95% of the ammonia in the process water stream is removed. The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. The test shall include sampling of the inlet andoutlet of the fuel gas scrubber and sour water stripper towers. [Basis: Regulation 9-1-313.2]	¥	4/01/04
Part 3	The Owner/Operator shall monitor and record on a monthly basis the visible emissions from Sources S-1, S-2, S-8, S-10, S-11, S-12, S-160, S-176,, S-233 and S-237 to demonstrate compliance with Regulation 6-301 (Ringlemann 1 or 20% opacity). These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-301]	Y	4/01/04

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 8	The Permit Holder shall perform annually a source test on S-1 and S-2 to determine compliance with Regulation 6-330 (Outlet grain loading not to exceed 0.08 grain/dscf of SO3 and H2SO4). The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-330]	Y	4/01/04

63.1565(b)(5)	Demonstrate Initial Compliance with Work Practice Standard by submitting Operation, Maintenance, and Monitoring Plan as part of the Notification of Compliance Status report.	¥	5/11/05
<del>63.1565(b)(6)</del>	Submit Notice of Initial Compliance Status containing the results of the initial compliance demonstration.	¥	5/11/05
<del>63.1565(e)</del>	Continuous Compliance Demonstration with emission limitation and work practice standards		
<del>63.1565(c)(1)</del>	Demonstrate Continuous Compliance with Emission Limitation: collect hour average CO monitoring data and hourly average CO concentration at or below 500 ppmv (dry basis)	¥	4/11/05
<del>63.1565(e)(2)</del>	Demonstrate Continuous Compliance with Work Practice Standard through maintaining records to document conformance with the Operation, Maintenance, and Monitoring Plan.	¥	4/11/05
63.1569	Requirements for HAP Emissions from Bypass Lines	¥	4/11/05
63.1569(a)(1)	Meet work practice standards for bypass lines by selecting one of four options.	¥	4/11/05
63.1569(a)(1)(i)	Install an automated system in the bypass line (Option 1)	¥	4/11/05
63.1569(a)(2)	EPA may grant permission to use alternate bypass lines to those specified.		
63.1569(a)(3)	Prepare an Operations, Maintenance, and Operating Plan, and operate at all times in accordance with the Plan.	¥	4/11/05
63.1569(b)	Initial Compliance Demonstration with work practice standards	¥	4/11/05
63.1569(b)(1)	Conduct performance test for automated bypass line (Option 1)	¥	5/11/05
63.1569(b)(2)	Demonstrate initial compliance with work practice standard for bypass line with automated system (Option 1).	¥	4/11/05

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
<del>63.1569(b)(3)</del>	Demonstrate initial compliance with the work practice standard for automated bypass lines (Option 1) by submitting an Operations,  Maintenance, and Monitoring Plan as part of the Notification of Compliance Status report.	¥	5/11/05
63.1569(b)(4)	Submit the Notification of Compliance Status containing the results of the initial compliance demonstration.	¥	5/11/05
<del>63.1569(c)</del>	Demonstrate continuous compliance with the work practice standards for bypass lines.	¥	4/11/05
63.1569(c)(1)	Demonstrate continuous compliance with the work practice standards for automated bypass lines by continuously monitoring and recording whether flow is present in the bypass line, and recording whether the device is operating properly.	¥	4/11/05
<del>63.1569(e)(2)</del>	Demonstrate continuous compliance with the work practice standard for automated bypass lines by complying with the Operation, Maintenance, and Monitoring Plan.	¥	4/11/05
63.1570	General Compliance Requirements	¥	4/11/05
<del>63.1570(a)</del>	Operate in compliance with non-opacity standards at all times except during periods of startup, shutdown, and malfunction, as specified in 63.6(f)(1)	¥	4/11/05
63.1570(b)	Operate in compliance with the opacity limits at all times except during periods of startup, shutdown, and malfunction, as specified in 63.6(h)(1).	¥	4/11/05
<del>63.1570(e)</del>	Operate and maintain source including pollution control and monitoring equipment in accordance with 63.6(e)(1). Between 4/11/05 and the date continuous monitoring systems are installed and validated and operating limits have been set, maintain a log detailing operation and maintenance of process and equipment.	¥	4/11/05
63.1570(d)	Develop and implement startup, shutdown, and malfunction plan (SSMP) in accordance with 63.6(e)(3)	¥	4/11/05
<del>63.1570(e)</del>	Operate in accordance with SSMP during periods of startup, shutdown, and malfunction	¥	4/11/05
<del>63.1570(f)</del>	Report deviations from compliance with this subpart according to the requirements of 63.1575	¥	4/11/05
63.1570(g)	Deviations that occur during startup, shutdown, or malfunction are not violations if operating in accordance with SSMP	¥	4/11/05
63.1571	Performance Tests	¥	
63.1571(a)	Conduct Performance Test and submit results no later than 150 days after compliance date	¥	9/8/05

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
63.1571(a)(1)	For emission limitation or work practice standard where compliance is not demonstrated using performance test, opacity observation, or visible emission observation, conduct initial compliance demonstration within 30 days after compliance date	¥	5/11/05
63.1571(b)	Requirements for Performance Tests	¥	
63.1571(b)(1)	Conduct performance tests in accordance with the requirements of 63.7(e)(1)	¥	9/8/05
63.1571(b)(2)	Except for opacity and visual emissions observations, conduct three separate test runs of at least an hour for each performance test	¥	9/8/05
<del>63.1571(b)(3)</del>	Conduct each performance evaluation in accordance with the requirements of 63.8(e)	¥	9/8/05
63.1571(b)(4)	Do not conduct performance tests during periods of startup, shutdown, or malfunction	¥	9/8/05
63.1571(b)(5)	Arithmetic average of emission rates	¥	9/8/05
63.1565(d)	Adjustment of process or control device measured values when establishing an operating limit.		
63.1571(d)(4)	Adjust process or control device measured values when establishing operating limits for continuous parametric monitoring systems (optional).	¥	9/8/05
<del>63.1571(e)</del>	Changes to Operating limits for continuous parametric monitoring systems (optional)	¥	9/8/05
63.1572	Monitoring installation, operation, and maintenance requirements	¥	
63.1572(a)	Monitoring installation, operation, and maintenance requirements for continuous emission monitoring systems.	¥	4/11/05
63.1572(b)	Monitoring installation, operation, and maintenance requirements for continuous opacity monitoring systems.	¥	4/11/05
<del>63.1572(e)</del>	Monitoring installation, operation, and maintenance requirements for eontinuous parameter monitoring systems.	¥	4/11/05
63.1572(d)	Data monitoring and collection requirements	¥	4/11/05
63.1572(d)(1)	Conduct monitoring at all times source is operating except for monitoring malfunctions, repairs, and QA/QC activities	¥	4/11/05
<del>63.1572(d)(2)</del>	Not use data recorded during monitoring malfunctions, repairs, and QA/QC activities	¥	4/11/05
63.1573	Monitoring Alternatives	¥	
63.1573(c)	Automated data compression system (optional)	¥	4/11/05
<del>63.1573(d)</del>	Monitoring for alternative parameters (optional)	¥	4/11/05
<del>63.1573(e)</del>	Alternative Monitoring Requests (optional)	¥	4/11/05

#19466			
Part 6	The permit holder shall perform an annual source test on Sources S-5 and S-6 to demonstrate compliance with Regulation 6-310 (outlet grain loading no greater than 0.15 grain/dscf). The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-310]	Y	4/01/04
Part 9	The Owner/Operator shall perform an annual source test on Sources S-5 and S-6 to demonstrate compliancewith Regulation 6-311 (PM mass emissions rate not to exceed 4.10P <sup>0.67</sup> lb/hr). The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-311]	Y	4/01/04
Part 15	The Owner/Operator shall use the continuous opacity monitors required byRegulation 1-520 to monitor compliance for the opacity limits at the Main Stackfor the following sources: S-5 Fluid Catalytic Cracking Unit, Catalyst Regenerator S-6 Fluid Coker, Burner	Y	4/01/04

### IV. Source Specific Applicable Requirements

#### Table IV - A8.1 Source-Specific Applicable Requirements Acid Gas and South Flares S-16, S-18 (ST-2101AG, ST-2101)

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
40 CFR	Subpart J not applicable: Constructed/modified before 6/11/1973	Y	2400
60.100(b)			
BAAQMD Condition #20806	Permit Conditions for S-16, S-18, and S-19		
Part 1	The Owner/Operator shall not flare more than the following pounds per hour of vent gas as defined in Regulation 12-11-210 in S-16 Acid Gas Flare 79,000 lb/hr S-18 South Flare 1,200,000 lb/hr S-19 North Flare 886,000 lb/hr (Basis: Regulation 8-1-110.3; 2-1-403)	Y	1/1/05
Part 2	In order to demonstrate compliance with Part 1 of this condition, the Owner/Operator shall record on an hourly basis the pounds of vent gas flared at S-16, S-18, S-19 Flares. The Owner/Operator shall maintain these records for a period of five years from the date of entry and make sure records are available for the APCO upon request. (Basis: Regulation 8-1-110.3; 2-6-409.2; 2-6-501)	Y	1/1/05
Part 3	For the purposes of these conditions, a flaring event is defined as a flow rate of vent gas flared in any consecutive 15 minutes period that continuously exceeds 330 standard cubic feet per minute (scfm). If during a flaring event, the vent gas flow rate drops below 330 scfm and then increases above 330 scfm within 30 minutes, that shall still be considered a single flaring event, rather than two separate events. For each flaring event during daylight hours (between sunrise and sunset), the Owner/Operator shall inspect the flare within 15 minutes of determining the flaring event, and within 30 minutes of the last inspection thereafter, using video monitoring or visible inspection following the procedure described in Part 4 of this condition.  (Basis: Regulation 2-6-409.2)	Y	1/1/05
Part 4	The Owner/Operator shall use the following procedure for the initial inspection and each 30-minute inspection of a flaring event.  a. If the Owner/Operator can determine that there are no visible emissions using video monitoring, then no further monitoring is necessary for that particular inspection.  b. If the Owner/Operator cannot determine that there are no visible emissions using video monitoring, the Owner/Operator shall conduct a visual inspection outdoors using either:  i. EPA Reference Method 9; or  ii. Survey the flare by selecting a position that enables a clear view of the flare at least 15 feet, but not more than 0.25 miles, from the emission	Y	1/1/05

### IV. Source Specific Applicable Requirements

Procedure 1	QA Requirements for Gas Continuous Emission Monitoring Systems	Y	
BAAQMD Condition #20806	Permit Conditions for S-16, S-18, and S-19		
Part 1	The Owner/Operator shall not flare more than the following pounds per hour of vent gas as defined in Regulation 12-11-210 in S-16 Acid Gas Flare 79,000 lb/hr S-18 South Flare 1,200,000 lb/hr S-19 North Flare 886,000 lb/hr (Basis: Regulation 8-1-110.3; 2-1-403)	Y	1/1/05
Part 2	In order to demonstrate compliance with Part 1 of this condition, the Owner/Operator shall record on an hourly basis the pounds of vent gas flared at S-16, S-18, S-19 Flares. The Owner/Operator shall maintain these records for a period of five years from the date of entry and make sure records are available for the APCO upon request. (Basis: Regulation 8-1-110.3; 2-6-409.2; 2-6-501)	Y	1/1/05
Part 3	For the purposes of these conditions, a flaring event is defined as a flow rate of vent gas flared in any consecutive 15 minutes period that continuously exceeds 330 standard cubic feet per minute (scfm). If during a flaring event, the vent gas flow rate drops below 330 scfm and then increases above 330 scfm within 30 minutes, that shall still be considered a single flaring event, rather than two separate events. For		

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
	each flaring event during daylight hours (between sunrise and sunset), the Owner/Operator shall inspect the flare within 15 minutes of determining the flaring event, and within 30 minutes of the last inspection thereafter, using video monitoring or visible inspection following the procedure described in Part 4 of this condition. (Basis: Regulation 2-6-409.2)		
Part 4	The Owner/Operator shall use the following procedure for the initial inspection and each 30-minute inspection of a flaring event.  a. If the Owner/Operator can determine that there are no visible emissions using video monitoring, then no further monitoring is necessary for that particular inspection.  b. If the Owner/Operator cannot determine that there are no visible emissions using video monitoring, the Owner/Operator shall conduct a visual inspection outdoors using either:  i. EPA Reference Method 9; or  ii. Survey the flare by selecting a position that enables a clear view of the flare at least 15 feet, but not more than 0.25 miles, from the emission source, where the sun is not directly in the observer's eyes.  c. If a visible emission is observed, the Owner/Operator shall continue to monitor the flare for at least 3 minutes, or until there are no visible emissions, whichever is shorter.  d. The Owner/Operator shall repeat the inspection procedure for the duration of the flaring event, or until a violation is documented in accordance with Part 5. After a violation is documented, no further inspections are required until the beginning of a new calendar day.  (Basis: Regulation 6-301, 2-1-403)	Y	1/1/05
Part 5	The Owner/Operator shall comply with one of the following requirements if visual inspection is used:  a. If EPA Method 9 is used, the Owner/Operator shall comply with Regulation 6-301 when operating the flare.  b. If the procedure of 4.b.ii is used, the Owner/Operator shall not operate a flare that has visible emissions for three consecutive minutes.  (Basis: Regulation 2-6-403)	Y	1/1/05
Part 6	The Owner/Operator shall keep records of all flaring events, as defined in Part 3. The Owner/Operator shall include in the records the name of the person performing the visible emissions check, whether video monitoring or visual inspection (EPA Method 9 or visual inspection process.)	Y	1/1/05

BAAQMD Condition # 19329			
Part 1	Hourly firing limits (Regulation 9, Rule 10, Cumulative Increase)	N	
Part 2	Quarterly and annual reports (Regulation 2-9-303.3)	N	
Part 3	Annual submittal of documents (Regulation 2-9-303.3)	N	
Part 4	Recordkeeping (Regulation 2-9-303.3)	N	
BAAQMD Condition # 10574			
Part 13	The refinery fuel gas combusted in any CFP equipment shall not exceed any of the following: (a) 100 ppmv H2S, averaged over a 24-hour calendar day and (b) 160 ppm H2S, averaged over any 3-hour period. [Basis: Cumulative Increase, BACT, NSPS]	Y	
Part 14	The refinery fuel gas combusted in any CFP equipment shall not exceed 51 ppmv of total reduced sulfur, averaged over any consecutive four quarter period. [Basis: Contemporaneous offsets provided in Application #18888 for S-237 Boiler, BACT]	Y	
Part 15	The Permit Holder shall install and operate a District approvedcontinuous gaseous fuel monitor/recorder to determine the H2S content and total reduced sulfur content of the refinery fuel gas prior to combustionin the CFP combustion sources (S-21, S-22 and S-220).[Basis: Monitoring and Records].	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 16	The Permit Holder shall calculate and record the 24-hour average H2S content and total reduced sulfur content of the refinery fuel gas, for determining compliance with Conditions No. 13 and 14, based on the previous 24 individual hourly averages. On a quarterly basis, Permit Holder shall report for S-220, S-21 and S-22: (a) the daily fuel consumption, (b) daily averaged H2S content of the refinery fuel gas, (c) daily averaged total reduced sulfurcontent (d) quarterly daily averaged H2S content, (e) quarterly daily averaged total reduced sulfur content and (f) annual averaged total reduced sulfur content using the last four quarters. [Basis Contemporaneous offsets provided in Application #18888 for S-237 Boiler, BACT]	Y	
Part 17	All new and modified combustion sources (S-21, S-22 and S-220), as part of the CFP, shall fire natural gas, LPG/pentane gases or refinery fuel gas. In no case shall any combustion source burn a fuel with a H2S concentration exceeding 100 ppmv, averaged over 24 hours (calendar day). [Basis: BACT, Cumulative Increase]		
Part 18	Total combined emissions from these new and modified combustion sources (S-21, S-22 and S-220), installed as a part of the CFP shall not exceed the following annual limits:    Pollutant   Ton/year	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 20	The Permit Holder shall calculate and totalize NOx, CO, POC, S02 and PM10 emissions from all new and modified combustion sources (S-21, S-22 and S-220) in the Clean Fuels Project on a calendar year basis to demonstrate compliance with Condition number 18. The emission factors or procedure to be used for this purpose shall be: NOx: Summation of daily emissions in Alternative Compliance Plan for Regulation 9-10 compliance  CO: 0.0200 lb/MMBtu  POC: 0.0023 lb/MMBtu  SO2: 0.0069 lb/MMBtu  PM10: 0.0040 lb/MMBtu  The results shall be retained on site for a period of at least five years and made available to District staff upon request. [Basis: BACT, Cumulative Increase]	Y	
Part 21	Except for no more than 3 minutes in any hour, the Owner/Operator shall limit the visible emissions from the three combustion sources (S- 21, S-22 and S-220) or the three abatement devices (A- 43, A-44 and A-45) installed as part of the CFP to no more than Ringelmann No. 1.0 or 20% opacity. [Basis: BAAQMD 6-301]	Y	
Part 22	Except for no more than 3 minutes in any hour, the Owner/Operator shall limit the visible emissions from the three combustion sources (S- 21, S-22 and S-220) or the three abatement devices (A- 43, A-44 and A-45) installed as part of the CFP to no more than Ringelmann No. 1.0 or 20% opacity. [Basis: BAAQMD 6-301]	Y	
Part 31	For the S-21 and S-22 furnaces, the emissions of nitrogen oxides based on CI with the test method outlined in the District Source Test Method 13A or 13B. [Basis: Cumulative Increase, Offsets]	Y	
Part 32	For the S-21 and S-22 furnaces, the emissions of CO shall not exceed 28 ppmv, dry, corrected to 3% oxygen (0.02 lb/MM Btu) averaged over any consecutive 8 hour period, except for periods during periods of startup and shutdown. [Basis: Cumulative Increase]	Y	
Part 33	Sources S-21 and S-22 shall be equipped with low NOx burners. The low the manufacturer's recommended procedures during periods of operation. [Basis: BAAQMD 9-10]	Y	
Part 37	The total combined heat input for S-21 and S-22 shall not exceed 106 million	Y	
Part 38	The maximum firing rate of the S-21 Hydrogen Reforming Furnace shall not exceed 614 million Btu per hour for all fuels combusted at the source. [Basis: Cumulative Increase, Toxics]	Y	
Part 39	The maximum firing rate of the S-22 Hydrogen Reforming Furnace shall not exceed 614 million Btu per hour for all fuels combusted at the source. [Basis: Cumulative Increase, Toxics]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part F	Each CEM shall be installed, maintained, calibrated and operated in accordance with all applicable District regulations. For condition number 15, the CEM for the Refinery fuel gas shall include a data-logging device that averages the CEM concentration readings over the 24-hour time period (calendar day). [Basis: BACT]	Y	
Part G	The Permit Holder shall keep records of all necessary information to demonstrate compliance with all permit conditions associated with the Clean Fuels Project. All records shall be retained for at least five years from the date of entry, and shall be made available to the District upon request. This includes, but is not limited to, records of the following:  Fuel usage type and amount for:  S-220 Hot Oil System  S-21 Hydrogen Reformer Furnace  S-22 Hydrogen Reformer Furnace  CEM data and CEM indicated excesses;  Fuel gas H2S concentration (24-hour Average);  Fuel gas total reduced sulfur Concentration Average)  Fuel gas usage rates (cubic feet/day)  Fuel heat content, HHV [24-hour average]  Actual Firing Rate (Btu/month)  Miscellaneous [Basis BACT]	Y	
Part H	Any process vessel depressurization gas shall be vented to a control device with overall capture and destruction efficiency of 95% on a mass basis.  [Basis: Cumulative Increase]	Y	
BAAQMD Condition # 19466			
Part 10	The Permit Holder shall conduct a District-approved source test on a semi-annual basis on Sources S-7, S-20, S-21, S-22, S-23, S-24, S-25, S-26, S-30, S-31, S-32, S-33, S-34, S-40, S-41 and S-220 and on an annual basis on sources S-35 and S-173 to demonstrate compliance with Regulation 9-10-305 (CO not to exceed 400 ppmv, dry, at 3% O2, operating day average). The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 9-10-305]	Y	4/01/04
BAAQMD Condition # 21233			
Part 1	Regulation 9-10 Compliance (NOx Box) Affected Sources and IERCs	N	1/1/05
Part 2	O2 Monitoring Device Installation	N	1/1/05
Part 8	Periodic Source Testing for Sources with a NOx CEM	N	1/1/05

Facility Name: Valero Refining Co.-CA Permit for Facility #: B2626

BAAQMD Condition # 9296			
Part D1	For the S-40 Steam Boiler: The steam boiler (S-40) shall be equipped with Low NOx burners and flue gas recirculation. [BAAQMD 9-10, Offsets, Cumulative Increase]	Y	
Part D2	For the S-40 Steam Boiler: The NOx concentration shall not exceed 30 ppmv, dry, corrected to 3 oxygen, as averaged over any 12-month period. [Basis: Offsets]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part D3	For the S-40 Steam Boiler: The CO concentration shall not exceed 400 ppmv, dry, corrected to 3 % oxygen. [BAAQMD 9-10, Cumulative Increase]	Y	
Part D4	The scrubber system upstream of S-40 Boiler shall have an annualized daily averaged (calendar year) total reduced sulfur concentration not to exceed 51 ppm, by volume. [Offsets]	Y	
Part D6	For the S-40 Steam Boiler: Permit Holder shall maintain daily records, in a District approved log, of the total reduced sulfur concentration required in Condition number 4. These records shall be retained for a period of at least 5 years from date of entry. The logs shall be kept on site and made available to District staff upon request. [Banked POC credits]	Y	
Part D7	The maximum firing rate of the S-40 Utility package Boiler shall not exceed 218 million Btu per hour. (Cumulative Increase, Toxics)	Y	
BAAQMD Condition # 19466			
Part 10	The Permit Holder shall conduct a District-approved source test on a semi-annualY 4/01/04 basis on Sources S-7, S-20, S-21, S-22, S-23, S-24, S-25, S-26, S-30, S-31, S-32, S-33, S-34, S-40, S-41 and S-220 and on an annual basis on sources S-35 and S-173 to demonstrate compliance with Regulation 9-10-305 (CO not to exceed 400 ppmv, dry, at 3% O2, operating day average). The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 9-10-305]	Y	4/01/04
BAAQMD Condition # 19466			
Part 14	The Owner/Operator shall use the continuous emission monitor required by Regulation 9, Rule 10, to monitor compliance for all NOx limits at thefollowing sources: [Basis: Monitoring]CO Furnaces: S-3, S-4. Process Furnaces: S-21, S-22, S-23, S-25, S-30, S-31, S-32, S-33, S-220 Steam Generators: S-40, S-41	Y

BAAQMD Condition # 10574			
Part 4	All hydrocarbon flow control valves installed as part of the Clean Fuels Project shall be equipped with live loaded packing systems and polished stems, or equivalent. [Basis: BACT]	Y	
Part 5	Except as required by Condition number 4, all other hydrocarbon valves greater than 2 inches installed as part of the CFP shall be one of the following types: (1) bellows sealed, (2) live loaded, (3) graphitic- packed, (4) teflon packed valves or (5) equivalent. [Basis: BACT]	Y	
Part 7	All flanges installed in the piping systems as a result of the CFP shall be equipped with graphitic-based gaskets, except in services that are not compatible with graphitic material. Asbestos type gaskets shall be used in service where graphitic-based gaskets are not compatible.[Basis: BACT, Offsets, Cumulative Increase, Toxics].	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 10	The pressure relief valves, installed as part of the CFP, in gaseous POC and light liquid service shall be vented to the gas recovery system, or an equivalent control device approved by the District (equivalent does not include rupture disk and/or soft-seat, if vented to atmosphere). This condition does not apply to pressure relief valves on storage tanks or pressure relief valves that handle only low vapor pressure organic liquids (< 0.5 psia). [Basis: BACT]	Y	
Part 12	Total fugitive POC emissions from all new and modified equipment installed as a result of the Clean Fuels Project, which includes Sources S-1020 through S-1024, S-1026, S-220, S-227, S-1007, S-1011, S-1014 and S-151 shall not exceed 20.8 tons in any rolling 365 consecutive day period. This total may be adjusted by the District in accordance with the provisions of Condition number 9. [Basis: Cumulative Increase]	Y	
Part 13	The refinery fuel gas combusted in any CFP equipment shall not exceed any of the following: (a) 100 ppmv H2S, averaged over a 24-hour calendar day and (b) 160 ppm H2S, averaged over any 3-hour period. [Basis: Cumulative Increase, BACT, NSPS]	Y	
Part 14	The refinery fuel gas combusted in any CFP equipment shall not exceed 51 ppmv of total reduced sulfur, averaged over any consecutive four quarter period. [Basis: Contemporaneous offsets provided in Application #18888 for S-237 Boiler, BACT>	Y	
Part 15	Permit Holder shall install and operate a District approved continuous gaseous fuel monitor/recorder to determine the H2S content and total reduced sulfur content of the refinery fuel gas prior to combustion in the CFP combustion sources (S-21, S-22 and S-220). [Basis: Monitoring and Records].	Y	
Part 16	Permit Holder shall calculate and record the 24-hour average H2S content and total reduced sulfur content of the refinery fuel gas, for determining compliance with Conditions No. 13 and 14, based on the previous 24 individual hourly averages. On a quarterly basis, Permit Holder shall report for S-220, S-21 and S-22: (a) the daily fuel consumption, (b) daily averaged H2S content of the refinery fuel gas, (c) daily averaged total reduced sulfur content (d) quarterly daily averaged H2S content, (e) quarterly daily averaged total reduced sulfur content using the last four quarters. [Basis: Contemporaneous offsets provided in Application #18888 for S-237, Boiler BACT]	Y	

Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
All new and modified combustion sources (S-21, S-22 and	Y	
S-220), as part of the CFP, shall fire natural gas, LPG/pentane gases or		
refinery fuel gas. In no case shall any combustion source burn a fuel with		
a H2S concentration exceeding 100 ppmv, averaged over 24 hours		
(calendar day). [Basis: BACT, Cumulative Increase]		
Total combined emissions from these new and modified combustion sources (S-21, S-22 and S-220), installed as a part of the CFP shall not exceed the following annual limits:  Pollutant Tons/yeat  NOx 17.11 (S-220 only)  CO 134.904  SO2 59.358  PM10 26.981  POC 15.514	Y	
(Note: NOx emission increases from new S-220 Hot Oil System only. The		
two modified combustion sources (S-21 and S-22) will not increase NOx		
emissions from the baseline total of 195.3 and 191.8 tons per year,		
respectively.) [Basis: New Source Review trigger, BACT, Cumulative		
Increase, Offsets, SO2 Contemporaneous offset credits for S02 and PMIO		
in Application #18888]		
The three furnaces (S-21, S-22 and S-220) with a District approved	Y	
continuousfuel flow monitor and recorder in order to determine fuel		
consumption. [Basis: Monitoring and records]		
Permit Holder shall calculate and totalize NOx, CO, POC, S02 and PM10 emissions from all new and modified combustion sources (S-21, S-22 and S-220) in the Clean Fuels Project on a calendar year basis to demonstrate compliance with Condition number 18. The emission factors or procedure to be used for this purpose shall be:  NOx: Summation of daily emissions in Alternative Compliance Plan for Regulation 9-10 compliance  CO: 0.0200 lb/MMBtu  POC: 0.0023 lb/MMBtu  SO2: 0.0069 lb/MMBtu  PM10: 0.0040 lb/MMBtu  The results shall be retained on site for a period of at least five years and made available to District staff upon request. [Basis: BACT, Cumulative	Y	
	All new and modified combustion sources (S-21, S-22 and S-220), as part of the CFP, shall fire natural gas, LPG/pentane gases or refinery fuel gas. In no case shall any combustion source burn a fuel with a H2S concentration exceeding 100 ppmv, averaged over 24 hours (calendar day). [Basis: BACT, Cumulative Increase]  Total combined emissions from these new and modified combustion sources (S-21, S-22 and S-220), installed as a part of the CFP shall not exceed the following annual limits:  Pollutant Tons/yeat  NOx 17.11 (S-220 only)  CO 134.904  SO2 59.358  PM10 26.981  POC 15.514  (Note: NOx emission increases from new S-220 Hot Oil System only. The two modified combustion sources (S-21 and S-22) will not increase NOx emissions from the baseline total of 195.3 and 191.8 tons per year, respectively.) [Basis: New Source Review trigger, BACT, Cumulative Increase, Offsets, SO2 Contemporaneous offset credits for S02 and PMIO in Application #18888]  The three furnaces (S-21, S-22 and S-220) with a District approved continuousfuel flow monitor and recorder in order to determine fuel consumption. [Basis: Monitoring and records]  Permit Holder shall calculate and totalize NOx, CO, POC, S02 and PM10 emissions from all new and modified combustion sources (S-21, S-22 and S-220) in the Clean Fuels Project on a calendar year basis to demonstrate compliance with Condition number 18. The emission factors or procedure to be used for this purpose shall be:  NOx: Summation of daily emissions in Alternative Compliance Plan for Regulation 9-10 compliance  CO: 0.0200 lb/MMBtu  POC: 0.0023 lb/MMBtu  POC: 0.0023 lb/MMBtu  POC: 0.0040 lb/MMBtu  The results shall be retained on site for a period of at least five years and	Regulation Title or Description of Requirement  All new and modified combustion sources (S-21, S-22 and S-220), as part of the CFP, shall fire natural gas, LPG/pentane gases or refinery fuel gas. In no case shall any combustion source burn a fuel with a H2S concentration exceeding 100 ppmy, averaged over 24 hours (calendar day). [Basis: BACT, Cumulative Increase]  Total combined emissions from these new and modified combustion sources (S-21, S-22 and S-220), installed as a part of the CFP shall not exceed the following annual limits:  Pollutant Tons/yeat  NOx 17.11 (S-220 only)  CO 134.904  SO2 59.358  PM10 26.981  POC 15.514  (Note: NOx emission increases from new S-220 Hot Oil System only. The two modified combustion sources (S-21 and S-22) will not increase NOx emissions from the baseline total of 195.3 and 191.8 tons per year, respectively.) [Basis: New Source Review trigger, BACT, Cumulative Increase, Offsets, SO2 Contemporaneous offset credits for S02 and PMIO in Application #18888]  The three furnaces (S-21, S-22 and S-220) with a District approved continuousfuel flow monitor and recorder in order to determine fuel consumption. Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 21	Except for no more than 3 minutes in any hour, the Owner/Operator shall limit the visible emissions from the three combustion sources (S- 21, S-22 and S-220) or the three abatement devices (A- 43, A-44 and A-45) installed as part of the CFP to no more than Ringelmann No. 1.0 or 20% opacity. [Basis: BAAQMD 6-301]	Y	
Part 22	For purposes of permitting S-220, S-21 and S-22, a maximum limit of 24 consecutive hours has been set for startup and shutdown. The 24-consecutive-hour startup period may be extended to include furnace dryout/warmup periods (mechanical and process) that are limited to not exceed an additional 72 consecutive hours. The 24-hour period does not apply during the initial startup of the Units. [Basis: Cumulative Increase]	Y	
Part 23	Except during startup and shutdown, emissions of nitrogen oxides from the S-220 Hot Oil System shall not exceed 10 ppmv, dry, corrected to 3% oxygen, (0.0118 lb/MMBtu) averaged over any 3 consecutive hours. [Basis: BACT, Offsets, Cumulative Increase]	Y	
Part 24	For the S-220 Hot Oil System, CO emissions shall not exceed 28 ppmv, dry, corrected to 3% oxygen, (0.02 lb/MMBtu) averaged over 8 hours, except during periods of startup and shutdown. [Basis: BACT, Offsets, Cumulative Increase]	Y	
Part 25	S-220 shall be abated at all times by A-45 Selective Catalytic Reduction System when it is in operation. Operation of the A-45 Selective Catalytic System shall be in accordance with manufacturer's recommended procedures during periods of operation. [Basis: BACT, Offsets, Cumulative Increase]	Y	
Part 26	Except during periods of startup and shutdown, ammonia emissions (ammonia slip) from the SCR unit (A-45) shall not exceed 10 ppmv of ammonia, dry, corrected to 3% oxygen, averaged over any consecutive 3 hour period. [Basis: BACT, Offsets, Cumulative Increase]		
Part 27	For source S-220, the Owner/Operator shall install, calibrate, maintain, and operate a District-approved continuous emission monitor and recorder for NOx and O2. [Basis: Monitoring]	Y	
Part 29	The total combined heat input for S-220 shall not to exceed 28.908 million therms (2.89 trillion Btus) in any 365 consecutive day period. [Basis: BACT, Offsets, Cumulative Increase]	Y	
Part 30	The maximum firing rate of the S-220 MRU Hot Oil Furnace shall not exceed 351 million Btu per hour. [Basis: Cumulative Increase, Toxics]	Y	
Part F	Each CEM shall be installed, maintained, calibrated and operated in accordance with all applicable District regulations. For condition number 15, the CEM for the Refinery fuel gas shall include a data-logging device that averages the CEM concentration readings over the 24-hour time period (calendar day). [Basis: BACT]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part G	The Permit Holder shall keep records of all necessary information to demonstrate compliance with all permit conditions associated with the Clean Fuels Project. All records shall be retained for at least five years from the date of entry, and shall be made available to the District upon request. This includes, but is not limited to, records of the following:  Fuel usage type and amount for:  S-220 Hot Oil System  S-21 Hydrogen Reformer Furnace  S-22 Hydrogen Reformer Furnace  CEM data and CEM indicated excesses;  Fuel gas H2S concentration (24-hour Average);  Fuel gas total reduced sulfur Concentration Average)  Fuel gas usage rates (cubic feet/day)  Fuel heat content, HHV [24-hour average]  Actual Firing Rate (Btu/month)  Miscellaneous [Basis: BACT]	Y	
Part H	Any process vessel depressurization gas shall be vented to a control device with tan overall capture and destruction efficiency of 95% on a mass basis. [Basis: Cumulative Increase]	Y	
BAAQMD Condition # 19466			
Part 10	The Permit Holder shall conduct a District-approved source test on a semi-annual basis on Sources S-7, S-20, S-21, S-22, S-23, S-24, S-25, S-26, S-30, S-31, S-32, S-33, S-34, S-40, S-41 and S-220 and on an annual basis on sources S-35 and S-173 to demonstrate compliance with Regulation 9-10-305 (CO not to exceed 400 ppmv, dry, at 3% O2, operating day average). The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 9-10-305]	Y	4/01/04
Part 14	The Owner/Operator shall use the continuous emission monitor required by Regulation 9, Rule 10, to monitor compliance for all NOx limits at the following sources: [Basis: Monitoring]CO Furnaces: S-3, S-4.Process Furnaces: S-21, S-22, S-23, S-25, S-30, S-31, S-32, S-33, S-220 Steam Generators: S-40, S-41	Y	4/01/04

Procedure 1	QA Requirements for Gas Continuous Emission Monitoring Systems	Y	
BAAQMD Condition # 16027			
Part 8	Total emissions form this combustion source (S-237) including startups and shutdowns, shall not exceed the following annual limits:  Pollutant Annual (tons)  NOx 13.278  CO 44.721  SO2 8.644  PM10 3.132  POC 2.881  Combustion emissions shall be calculated using the following emission factors:  NOx Summation of daily emissions using CEM data  CO 0.0200 lb/MMBtu  SO2 0.0069 lb/MMBtu  PM10 0.0025 lb/MMBtu  POC 0.0023 lb/MMBtu  POC 0.0023 lb/MMBtu.  Sasis: Cumulative Increase, Offsets>	Y	
Part 9	The S-237 Boiler shall be equipped with a District approved continuous fuel flow monitor and recorder in order to determine fuel consumption. (This is a parametric monitor as defined in Regulation 1-238.) < Basis: Monitoring and Records>	Y	
Part 10	Except for no more than 3 minutes in any hour, the Owner/Operator shall limit the Visible emissions from the S-237 Boiler to at or belowRingelmann No. 1.0 or 20% opacity, as required by Regulation 6. < Basis: BAAQMD 6-301>	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 11	Startups and shutdowns shall not exceed 24 consecutive hours. The 24-consecutive-hour startup period is in addition to boiler dryout/warmup periods that are limited to not exceed 72 consecutive hours. The 24-hour period does not apply during the initial startup of the Units.S-237 Boiler.	Y	
Part 12	Basis: Cumulative Increase, offsets, operational allowances>  Except during startup and shutdown, emissions of nitrogen oxides from the S-237 shall not exceed 9 ppmv, dry, corrected to 3% oxygen, (0.0106 lb/MMBtu) averaged over any 3 consecutive hours. < Basis: BACT, offsets>	Y	
Part 13	For the S-237 Boiler, CO emissions shall not exceed 50 ppmv, dry, corrected to 3% oxygen, (0.0357 lb/MMBtu) averaged over 8 hours, except during periods of startup and shutdown. Demonstration of compliance will be based on source test data < Basis: BACT>	Y	
Part 14	S-237 shall be abated at all times by A-58 Selective Catalytic Reduction System when it is in operation. Operation of the A-58 Selective Catalytic System shall be in accordance with manufacturer's recommended procedures during periods of operation. < Basis: BACT control>	Y	
Part 15	Except during periods of startup and shutdown, ammonia emissions (ammonia slip) from the SCR unit (A-58) shall not exceed 10 ppmv of ammonia, dry, corrected to 3% oxygen, averaged over any consecutive 3-hour period. Demonstration of compliance shall be based on source test data. < Basis: Cumulative Increase, Toxics>	Y	
Part 16	The Permit Holder shall install, calibrate, maintain, and operate a District-approved continuous emission monitor and recorder for NOx and 02. <monitoring and="" records=""></monitoring>	Y	
Part 18	The total combined heat input for S-237 shall not exceed 2,505,360 million BTUs (HHV) in any 365 consecutive day period. < Basis: Cumulative Increase, Offsets>	Y	
Part 19	The total combined heat input for S-237 shall not exceed 7,560 million BTUs in any calendar day period. < Basis: Cumulative Increase>	Y	
Part 22	The Owner/Operator shall conduct a District-approved source test on an annual basis on Source S-237 to demonstrate compliance with the limit in Part 13 of this condition. The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 30 days after the test. These records shall be kept for a period of at least 5 years from the date of entry and shall be made available to District staff upon request. Sasis: Regulation 2-6-503>	Y	_

BAAQMD Condition # 19177			
Part 1	Prior to the issuance of the Authorities to Construct for this Cogeneration project consisting of Phase I and/or Phase II, the owner will provide the following offsets: (Basis: NOx and POC)  Phase I (S-1030 and S-1031)  NOx: 13.162TPY from Certificate # 703  Phase II (S-1032 and S-1033)  NOx: 18.477 TPY Total  18.256 TPY NOx from Certificate #703  0.221 TPY POC for NOx from Certificate #682  POC: 7.401 TPY POC from Certificate #682	Y	
Part 2	For SO2 emissions offsets, a curtailment group is established as follows: (Basis: SO2 offsets)  Curtailment Group: Emission Sources Total Group Baseline S-237 Steam Boiler SG1032; S-220 Hot Oil Furnace F 4460;  MTBE Ships; S-40 Boiler SG2301  Phase I New GT/HRSG (S-1030 & S-1031)  Phase II New GT/HRSG (S-1032 & S-1033)  a. SO2 emissions from the Curtailment Group will not exceed 34.75  TPY for any consecutive 12-month period. Shut down of a source within the group may not change this group annual limit.  b. Emissions will be calculated using fuel flow meters and the TRS Gas Chromatograph CEMs data for all sources other than MTBE ships.  Emissions from MTBE ships will be calculated using the District approved method established for the ships in Application #6968,  Condition #10797.  c. A quarterly report of the group emissions will be submitted to the District, in a District approved format, to document compliance.	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 3	The owner/operator of the proposed power plant (S-1030, S-1031, S-1032, S-1033) shall minimize emissions of carbon monoxide and nitrogen oxides from these sources to the maximum extent possible during the commissioning period. Conditions 3 through 12 shall only apply during the commissioning period as defined above. Unless otherwise indicated, the remaining conditions shall apply after the commissioning period has ended.	Y	
Part 4	At the earliest feasible opportunity, but no later than 30 days after startup, in accordance with the recommendations of the equipment manufacturers and the construction contractor, the Gas Turbine combustors and Heat Recovery Steam Generator duct burners shall be tuned to minimize the emissions of carbon monoxide and nitrogen oxides.	Y	
Part 5	At the earliest feasible opportunity, but no later than 30 days after startup, in accordance with the recommendations of the equipment manufacturers and the construction contractor, the A-60/A-62 SCR System, and A-61/A-63 CO Oxidation Catalyst System shall be installed, adjusted, and operated to minimize the emissions of carbon monoxide and nitrogen oxides from S-1030 Gas Turbine and S-1031 Heat Recovery Steam Generator.	Y	
Part 6	Coincident with the as designed operation of A-60/62 SCR System, the Gas Turbines (S-1030 and S-1032) and the HRSG (S-1031 and S-1033) shall comply with the NOx and CO emission limitations specified in conditions 18(a), 18(b), 19(b) and 19(d).	Y	
Part 7	The owner/operator shall submit a plan to the District Permit Services Division and the CEC CPM at least four weeks prior to first firing of S-1030 or S-1032 Gas Turbine describing the procedures to be followed during the commissioning of the gas turbine and HRSG. The plan shall include a description of each commissioning activity, the anticipated duration of each activity in hours, and the purpose of the activity. The activities described shall include, but not be limited to, the tuning of the combustors, the installation and operation of the SCR systems and oxidation catalysts, the installation, calibration, and testing of the CO and NOx continuous emission monitors, and any activities requiring the firing of the Gas Turbines (S-1030 or S-1032) and HRSGs (S-1031 or S-1033) without abatement by their respective SCR and CO Catalyst Systems.	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 8	During the commissioning period, the owner/operator shall demonstrate compliance with conditions 10 through 12 through the use of properly operated, and maintained continuous emission monitors and data recorders for the following parameters: firing hours for the gas turbine and HRSG fuel flow rates through the trainstack gas nitrogen oxide (and oxygen) emission concentrations at P-60/P-62stack gas SO2 emission concentrations at P-60/P-62 or fuel TRS/H2S concentrations. The monitored parameters shall be recorded at least once every 15 minutes (excluding calibration periods as required by the MOP or when the monitored source is not in operation) for the Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033). The owner/operator shall use District-approved methods to calculate heat input rates, NOx mass emission rates, carbon monoxide mass emission rates, SOx mass emission rates, and emission concentrations of NOx, SOx, and CO, summarized for each clock hour and each calendar day. All records shall be retained on site for at least 5 years from the date of entry and made available to District personnel upon request.	Y	
Part 9	The District-approved continuous emission monitors specified in condition 8 shall be installed, calibrated, and operational prior to first firing of the Gas Turbines (S-1030 or S-1032) and Heat Recovery Steam Generator (S-1031 or S-1033). After first firing of the turbine, the detection range of these continuous emission monitors shall be adjusted as necessary to accurately measure the resulting range of CO, SOx, and NOx emission concentrations. The type, specifications, and location of these monitors shall be subject to District review and approval.	Y	
Part 10	The total number of firing hours of S-1030/S-1032 Gas Turbines and S-1031/S-1033 Heat Recovery Steam Generators without abatement of nitrogen oxide emissions by A-60/A-62 SCR System and/or A-61/A-63 Oxidation Catalyst System shall not exceed 250 hours for each turbine and associated HRSG train during the commissioning period. Such operation of S-1030/S-1032 Gas Turbine and S-1031/S-1033 HRSG without abatement shabatement, for each turbine train shall expire.	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 11	The total mass emissions of nitrogen oxides, carbon monoxide, precursor organic compounds, PM10, and sulfur dioxide that are emitted by the Gas Turbines (S-1030 and S-1032) and Heat Recovery Steam Generators (S-1031 and S-1033) during the commissioning period shall accrue towards the consecutive twelve-month emission limitations specified in condition 22.	Y	
Part 12	Combined pollutant mass emissions from the Gas Turbine (S-1030 and S-1032) and Heat Recovery Steam Generators (S-1031 and S-1033) shall not exceed the following limits during the commissioning period. These emission limits shall include emissions resulting from the start-up and shutdown of the Gas Turbines and HRSGs (S-1030, S-1031, S-1032 & S-1033).NOx (as NO2) 360.34 pounds per calendar day CO 513.216 pounds per calendar day POC (as CH4) 97.776 pounds per calendar dayPM10 224.08 pounds per calendar daySO2 516 pounds per calendar day	Y	
Part 13	The Gas Turbines (S-1030 and S-1032) and HRSG Duct Burners (S-1031 and S-1033) shall be fired on refinery fuel and/or natural gas. (Basis: BACT for SO2 and PM10)	Y	
Part 14	The Gas Turbines (S-1030 and S-1032) and HRSG Duct Burners (S-1031 and S-1033) shall be fired on refinery fuel and/or natural gas. (Basis: BACT for SO2 and PM10)	Y	
Part 15	The combined heat input rate to the power train consisting of a Gas Turbine and its associated HRSG (S-1030 and S-1031 or S-1032 and S-1033) shall each not exceed 19,440 MM Btu per calendar day. (Basis: Cumulative Increase, Permit Fees, Modification, Offsets)	Y	
Part 16	The combined cumulative heat input rate for each power training consisting of Phase I (S-1030 and S-1031) or Phase II (S-1032 and S-1033) shall not exceed 6,351,000 MM Btu per year. (Basis: Offsets, Cumulative Increase, Modification)	Y	
Part 17	S-1030/S-1032 Gas Turbines and S-1031/S-1033 HRSGs shall be abated by the properly operated and properly maintained A-60/A-62 Selective Catalytic Reduction (SCR) System and A-61/A-63 CO Oxidation Catalyst System whenever fuel is combusted at those sources and the catalyst bed has reached minimum operating temperature as designated by the manufacturer. (Basis: BACT for NOx)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 18	The Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033) when firing natural gas exclusively shall comply with requirements (a) through (f) under all operating scenarios, including duct burner firing mode. Requirements (a) through (f) do not apply during a start-up or shutdown	Y	
Part 18(a)(1)	mode. (Basis: BACT, PSD, and Toxic Risk Management Policy)  Emissions of nitrogen oxides (NOx) at emission points P-60 or P-62 shall not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period.(Basis: BACT for NOx when firing natural gas)	Y	
Part 18(a)(2)	After the first 3 hours of operation of the Phase II Cogeneration Unit on natural gas exclusively during a changeover from refinery gas, the Owner/Operator shall limit the emissions of nitrogen oxides (NOx) at emission point P-62 to no more than 2.0 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. During this three hour transition period, the Emissions of nitrogen oxides (NOx) at emission point P-62 shall not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. (Basis: Phase II BACT for NOx when firing natural gas)	Y	
Part 18(b)	The carbon monoxide emissions concentration at P-60 or P-62 shall not exceed 6 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-clock hour period. (Basis: BACT for CO when firing natural gas)	Y	
Part 18(c)	Ammonia (NH3) emission concentrations at P-60 or P-62 shall not exceed 10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-hour period. (Basis: Toxics)	Y	
Part 18(d)	Ammonia (NH3) emission concentrations at P-60 or P-62 shall not exceed 10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-hour period. (Basis: Toxics)	Y	
Part 18(e)	For sulfur dioxide (SO2) emissions, the sulfur content in the natural gas shall not exceed 1.0 grain per 100 scf of natural gas. The owner shall use standard pipeline quality natural gas as supplied by PG&E. Compliance will be demonstrated in accordance with condition # 35. (Basis: BACT for SO2 when firing natural gas),	Y	
Part 18(f)	For particulate (PM10) emissions, the sulfur content in the natural gas shall not exceed 1.0 grain per 100 scf of natural gas. The owner shall use standard pipeline quality natural gas as supplied by PG&E. Compliance will be demonstrated in accordance with condition # 35. (Basis: BACT for PM10 when firing natural gas)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 19	The Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033)	Y	
	shall comply with requirements (a) through (h) under all operating		
	scenarios, including duct burner firing mode. Requirements (a) through (h)		
	do not apply during a start-up or shutdown mode. (Basis: BACT, PSD, and Toxic Risk Management Policy)		
Part 19(a)	Emissions of nitrogen oxides (NOx), calculated in accordance with District		Y
1 att 19(a)	approved methods as NO2, at P-60 (the combined exhaust point for the		1
	S-1030 Gas Turbine and the S-1031 HRSG after abatement by A-60 SCR		
	System) or P-62 (the combined exhaust point for the S-1032 Gas Turbine		
	and the S-1033 HRSG after abatement by the A-62 SCR system) shall not		
	exceed 7.29 pounds per clock hour. (Basis: BACT for NOx, Offsets)		
Part 19(b)	Emissions of nitrogen oxides (NOx) at emission points P-60 or P-62 shall	Y	
1 att 19(0)	not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over	1	
	any 3-clock hour period(Basis: BACT for NOx)		
Part 19(c)	Carbon monoxide mass emissions at P-60 or P-62 shall not exceed 10.692	Y	
Tart 17(c)	pounds per clock hour, averaged over any rolling 3-hour period (Basis:	1	
	PSD for CO)		
Part 19(d)	The carbon monoxide emission concentration at P-60 or P-62 shall not	Y	
	exceed 6 ppmv, on a dry basis, corrected to 15% O2, averaged over any		
	rolling 3-clock hour period. (Basis: BACT for CO)		
Part 19(e)	Ammonia (NH3) emission concentrations at P-60 or P-62 shall not exceed	Y	
	10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling		
	3-hour period. (Basis: Toxics)		
Part 19(f)	Precursor organic compound (POC) mass emissions (as CH4) at P-60 or	Y	
	P-62 shall not exceed 2.037 pounds per hour. Demonstration of		
	compliance will be based on source test results. (Basis: BACT)		
Part 19(g)	Sulfur dioxide (SO2) mass emissions at P-60 or P-62 shall not exceed 10.75	Y	
	pounds per hour (rolling 24 hour average). Sulfur concentrations in refinery		
	fuel gas shall not exceed 35 ppm TRS (rolling consecutive 365 day		
	average). (Basis: BACT) Sulfur concentrations in fuel gas fired in S-1030,		
	S-1031, S-1032 and		
	S-1033 shall not exceed 100 ppm TRS (rolling 24 hour average). (Basis:		
	BACT) Hydrogen sulfide (H2S) concentrations in refinery fuel gas shall		
	not exceed 160 ppm (rolling consecutive 3-hour average). (Basis: NSPS)		

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 19(h)	The Owner/Operator shall limit the particulate matter (PM10) massemissions from P-60 or P-62 to no more than 4.65 pounds per hour averaged over any consecutive 24-hours nor 1.55 pounds per hour averaged over a calendar year. This limit is subject to adjustment based on the results of source tests, in no case, however, may the adjusted limit exceed 4.65 lb/hr averaged over any consecutive 24-hours. Demonstration of compliance will be based on source test results. (Basis: BACT for PM10)	Y	
Part 20	The sulfuric acid emissions (SAM) from P-60 and P-62 combined shall be less than 7 tons in any consecutive four quarters. (Basis: PSD)	Y	
Part 21	A District approved initial source test will be commenced within 60 days of startup to demonstrate compliance with the NOx, CO, POC, TRS, SO2, PM10, NH3, and SAM levels in Conditions number 18, 19 or 20. For purposes of SAM, the applicant shall also test for SO3 and ammonium sulfates. The test results shall be forwarded to the District within 60 days of completion of the field test. The test should verify emission compliance at 80% or more of maximum firing on: 1. Gas Turbine firing natural gas only 2. Gas Turbine and HRSG firing natural gas only 3. Gas Turbine firing refinery fuel gas only 4. Gas Turbine and HRSG firing refinery fuel gas only. (Basis: PSD, BACT, TRMP, )	Y	
Part 22	Total emissions from each power train consisting of Phase I and Phase II (S-1030, S-1031, S-1032 and S-1033) shall not exceed the following annual limits (365 day rolling average): (Basis: Cumulative Increase, Offsets, PSD)	Y	
Part 22(a)	Phase I (S-1030 and S-1031)NOx - 28.603 TPY (based on CEM data) POC - 8.579 TPY (based on Gas Turbine/HRSG POC emissions of 7.983 TPY plus fugitive emissions of 0.596 TPY)SOx - 15.0 (based on TRS measurement)CO - 41.9285 TPY (based on CEM data)PM10 - 6.803 TPY (based on source test results)Phase II (S-1032 and S-1033) NOx - 28.603 TPY (based on CEM data)POC - 8.332 TPY (based on Gas Turbine POC emissions of 7.983 TPY plus fugitive emissions of 0.349 TPY)SOx - 15.0 (based on TRS measurement)CO - 41.9285 TPY (based on CEM data)PM10 - 6.803 TPY (based on source test results)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 22(b)	The PM10 emissions may be adjusted based on source test results for	Y	
	S-1030, S-1031, S-1032 and S-1033) if the particulate emission rate exceeds		
	wet cooling tower, shall not exceed a project total of 15.477 tons per year		
	of PM10. The Cogeneration project increase in PM10 is limited to the		
	available offsets for the proposed project, i.e. the contemporaneous		
	emission reductions from the shutting down of three boilers (S-38, S-39 and		
	S-41). The owner shall submit a new application for any increase in PM10		
	beyond the allowable level. (Basis: Cumulative Increase, Offsets)		
Part 22(c)	The PM10 emissions may be adjusted based on the use of recycled water in the exempt wet cooling tower instead of fresh water. In no case shall the adjustment when added to the assumed PM10 level on fresh water exceed the total of 3.8 tons per year for the wet cooling tower (restricted to toxic risk values). This adjustment along with the allowable adjustment in Condition 22(b) shall not exceed a combined total of 10.919 tons/year in Phase I or 15.477 tons/year for both phases. The Cogeneration project increase in PM10 is limited to the available offsets for the proposed project, i.e. the contemporaneous emission reductions from the shutting down of three boilers (S-38, S-39 and S-41). The owner shall submit a new application for any increase in PM10 beyond the allowable level. (Basis:	Y	
	Cumulative Increase, Offsets)		
Part 22(d)	The owner shall prepare an annual calendar-year report and submit it to the District documenting compliance with these annual limitations on mass emissions. The report shall be submitted to the District no later than 60 days after the close of the calendar year. (Basis: Compliance Monitoring)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 23	To demonstrate compliance with conditions 19(f), 19(g),19(h), 20 and parts of 22, the owner/operator shall calculate and record on a daily basis, the Precursor Organic Compound (POC) mass emissions, Fine Particulate Matter (PM10) mass emissions (including condensable particulate matter), Sulfuric Acid Mist (SAM) and Sulfur Dioxide (SO2) mass emissions from each power train. The owner/operator shall use the actual Heat Input Rates and District-approved emission factors to calculate these emissions. The calculated emissions shall be presented as follows:(a) For each calendar day, POC, PM10, SAM and SO2 emissions shall be summarized for the combined power train: [Gas Turbine (S-1030)/HRSG (S-1031)] and/or [Gas Turbine (S-1032)/HRSG (S-1033)](b) On a daily basis, the 365 day rolling average cumulative total POC, PM10, SAM and SO2 mass emissions, for both power trains: Gas Turbine (S-1030)/HRSG (S-1031) and/or Gas Turbine (S-1032)/HRSG (S-1033).(Basis: Offsets, PSD, Cumulative Increase)	Y	
Part 24	The owner/operator shall obtain approval for all source test procedures from dates at least 7 days prior to the testing date(s). As indicated above, the Owner/Operator shall measure the contribution of condensable PM (back half) to the total PM10 emissions. However, the Owner/Operator may propose alternative measuring techniques to measure condensable PM such as the use of a dilution tunnel or other appropriate method used to capture semi-volatile organic compounds. Source test results shall be submitted to the District within 60 days of conducting the tests. (Basis: Offsets, PSD, cumulative increase)	Y	
Part 25	The owner/operator shall submit all reports (including, but not limited to monthly CEM reports, monitor breakdown reports, emission excess reports, equipment breakdown reports, calculated compliance records, etc.) as required by District Rules or Regulations or through permit conditions, and in accordance with all procedures and time limits specified in the Rule, Regulation, Manual of Procedures, or Enforcement Division Policies & Procedures Manual. (Basis: Regulation 2-6-502)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 26	The owner/operator shall maintain all records and reports on site for a minimum of 5 years. These records shall include but are not limited to: continuous monitoring records (firing hours, fuel flows, emission rates, monitor excesses, breakdowns, etc.), source test and analytical records, natural gas sulfur content analysis results, emission calculation records, records of plant upsets and related incidents. The length of time, description and quantity of excess emissions associated with breakdowns shall be included in the recordkeeping requirements. The owner/operator shall make all records and reports available to District and the CEC CPM staff upon request. (Basis: Regulation 2-6-501)	Y	
Part 27	The owner/operator shall notify the District of any violations of these permit conditions consistent with the requirements of the Title V permit (Basis: Regulation 2-1-403)	Y	
Part 28	The stack height of emission points P-60 and P-62-shall each be at least 80 feet above grade level at the stack base. (Basis: PSD, TRMP)	Y	
Part 29	The Owner/Operator shall provide adequate stack sampling ports and platforms to enable the performance of source testing. The location and configuration of the stack sampling ports shall be subject to BAAQMD review and approval. (Basis: Regulation 1-501)	Y	
Part 30	Within 180 days of the issuance of the Authority to Construct, the Owner/Operator shall contact the BAAQMD Technical Services Division regarding requirements for the continuous monitors, sampling ports, platforms, and source tests required. All source testing and monitoring shall be conducted in accordance with the BAAQMD Manual of Procedures. (Basis: Regulation 1-501)	Y	
Part 31	The startup period for the Gas Turbines/HRSGs shall last for no more than the period defined in the Startup Mode. [Basis: Cumulative Increase, Toxics]	Y	
Part 33	Pursuant to 40 CFR Part 72.30(b)(2)(ii) of the Federal Acid Rain Program, the owner/operator of the Valero Power Plant shall not operate Phase II of the cogeneration project until either: 1) a Title IV Operating Permit has been issued; 2) 24 months after a Title IV Operating Permit Application has been submitted, whichever is earlier. (Basis: Regulation 2, Rule 7)	Y	
Part 34	The Cogeneration project shall comply with the continuous emission monitoring requirements of 40 CFR Part 75. (Basis: Regulation 2, Rule 7)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 35	The owner shall install and operate a District approved continuous refinery fuel gas fuel monitor/recorder to determine the H 2S content and total reduced sulfur content of the refinery fuel gas and natural gas prior to operation of the Cogeneration project (S-1030, S-1031, S-1032 and S-1033). This does not include pilot gas. (Basis: Refinery fuel gas and	Y	
Part 36  Part 37	natural gas monitoring for SO2, BACT)  The owner shall record the rolling consecutive 3-hour average totaled reduced sulfur content and H2S content of the refinery fuel gas. On a quarterly basis, the owner shall report: (a) the daily fuel consumption, (b) hourly H2S content (as averaged over 3 consecutive hours) of the refinery fuel gas, (c) hourly total reduced sulfur content (as averaged over 24 consecutive hours), (d) quarterly daily averaged H2S content, (e) quarterly daily averaged total reduced sulfur content and (f) annual averaged reduced sulfur content using the last four quarters. The report shall be sent to the District's Director of Compliance and Enforcement, and the Manager of the Permit Evaluation Section no later than 60 days after the end of the quarter. (Basis: BACT, Offsets, Cumulative Increase)  The four sources (S-1030, S-1031, S-1032 and S-1033) shall be equipped with a District approved continuous fuel flow monitor and recorder in order	Y	
Part 38	to determine the fuel consumption. (Basis: BACT, Offsets, Cumulative Increase, Monitoring)  The owner shall install, calibrate, maintain and operate a District-approved continuous emission monitor and recorder for NOx, CO and O2. (Basis: BACT, Offsets, Cumulative Increase)	Y	
Part 39	The owner shall conduct a quarterly source test to demonstrate compliance with 19 (f) for POC and 19 (h) for PM10. The owner shall conduct the tests in accordance with protocols approved in advance by the District. After acquiring one year of source test data on these units, the District may switch to annual source testing if test variability is low. [Basis: BACT]	Y	
Part 40	The owner shall conduct a quarterly source test to demonstrate compliance with condition 20 for Sulfuric Acid Mist (SAM). The testing shall also include testing for SO2, SO3, SAM and ammonium sulfates. The owner shall conduct the tests in accordance with protocols approved in advance by the District. After acquiring one year of source test data on these units, the District may switch to annual source testing if test variability is low. (Basis: Cumulative Increase)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 41	All hydrocarbon control valves installed as part of the Cogeneration Project	Y	
	in Phase I and Phase II shall be equipped with live loaded packing systems		
	and polished stems, or equivalent. (Basis: Cumulative Increase Offsets)		
Part 43	All connectors installed in the piping systems as a result of Phase I orPhase	Y	
	II of the Cogeneration project shall be equipped with graphitic-based		
	gaskets unless the service requirements prevent this material. Any		
	connector found to be leaking in excess of 100 ppm shall be subject to the		
	leak repair provisions of Regulation 8, Rule 18. (Basis: RACT, offsets,		
	Cumulative Increase)		
Part 44	All new hydrocarbon centrifugal compressors installed as part of Phase I or	Y	
	Phase II of the Cogeneration project shall be equipped with "wet" dual		
	mechanical seals with a heavy liquid barrier fluid, or dual dry gas		
	mechanical seals buffered with inert gas. All compressors shall be		
	inspected and repaired in accordance with District Regulation 8, Rule 18.		
	All compressors found to leaking in excess of 500 ppm shall be subject to		
	the leak repair provisions of Regulation 8, Rule 18. (Basis: RACT, Offsets,		
	Cumulative Increase)		
Part 46	The Cogeneration project consisting of S-1030, S-1031, S-1032, S-1033	Y	
	shall include the following gas fittings: no more than 600 valves, 1800		
	connectors and 4 compressors The annual mass limit for POC (Condition		
	number 22) and the offsets required may be adjusted based on final fugitive		
	component count. Any additional POC offsets required due to a larger		
	fugitive component count will need to be provided prior to permit issuance.		
	[Basis: Cumulative Increase, Offsets]		
Part 48	The S-41 steam boilers shall be completely shutdown no later than 90 days	Y	
	after startup of the S-1032 and S-1033 power train. The applicant shall		
	enter into the record log the <b>date the</b> boiler was shutdown. (Basis: offsets)

Procedure 1	QA Requirements for Gas Continuous Emission Monitoring Systems	Y	
BAAQMD Condition # 19177			
Part 1	Prior to the issuance of the Authorities to Construct for this Cogeneration	Y	
	project consisting of Phase I and/or Phase II, the owner will provide the		
	following offsets: (Basis: NOx and POC)		
	Phase I (S-1030 and S-1031)		
	NOx: 13.162TPY from Certificate # 703		
	Phase II (S-1032 and S-1033)		
	NOx: 18.477 TPY Total		
	18.256 TPY NOx from Certificate #703		
	0.221 TPY POC for NOx from Certificate #682		
	POC: 7.401 TPY POC from Certificate #682		

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 2	For SO2 emissions offsets, a curtailment group is established as follows: (Basis: SO2 offsets)Curtailment Group: Emission Sources Total Group Baseline S-237 Steam Boiler SG1032 S-220 Hot Oil Furnace F 4460 MTBE Ships S-40 Boiler SG2301 Phase I New GT/HRSG (S-1030 & S-1031)Phase II New GT/HRSG (S-1032 & S-1033) d. SO2 emissions from the Curtailment Group will not exceed 34.75 TPY for any consecutive 12-month period. Shut down of a source within the group may not change this group annual limit. e. Emissions will be calculated using fuel flow meters and the TRS Gas Chromatograph CEMs data for all sources other than MTBE ships. Emissions from MTBE ships will be calculated using the District approved method established for the ships in Application #6968, Condition #10797. f. A quarterly report of the group emissions will be submitted to the District, in a District approved format, to document compliance. (Basis: S02 offsets)	Y	
Part 3	The owner/operator of the proposed power plant (S-1030, S-1031, S-1032, S-1033) shall minimize emissions of carbon monoxide and nitrogen oxides from these sources to the maximum extent possible during the commissioning period. Conditions 3 through 12 shall only apply during the commissioning period as defined above. Unless otherwise indicated, the remaining conditions shall apply after the commissioning period has ended.	Y	
Part 4	At the earliest feasible opportunity, but no later than 30 days after startup, in accordance with the recommendations of the equipment manufacturers and the construction contractor, the Gas Turbine combustors and Heat Recovery Steam Generator duct burners shall be tuned to minimize the emissions of carbon monoxide and nitrogen oxides.	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 5	At the earliest feasible opportunity, but no later than 30 days after startup, in accordance with the recommendations of the equipment manufacturers and the construction contractor, the A-60/A-62 SCR System, and A-61/A-63 CO Oxidation Catalyst System shall be installed, adjusted, and operated to minimize the emissions of carbon monoxide and nitrogen oxides from S-1030 Gas Turbine and S-1031 Heat Recovery Steam Generator.	Y	
Part 6	Coincident with the as designed operation of A-60/62 SCR System, the Gas Turbines (S-1030 and S-1032) and the HRSG (S-1031 and S-1033) shall comply with the NOx and CO emission limitations specified in conditions 18(a), 18(b), 19(b) and 19(d).	Y	
Part 7	The owner/operator shall submit a plan to the District Permit Services Division and the CEC CPM at least four weeks prior to first firing of S-1030 or S-1032 Gas Turbine describing the procedures to be followed during the commissioning of the gas turbine and HRSG. The plan shall include a description of each commissioning activity, the anticipated duration of each activity in hours, and the purpose of the activity. The activities described shall include, but not be limited to, the tuning of the combustors, the installation and operation of the SCR systems and oxidation catalysts, the installation, calibration, and testing of the CO and NOx continuous emission monitors, and any activities requiring the firing of the Gas Turbines (S-1030 or S-1032) and HRSGs (S-1031 or S-1033) without abatement by their respective SCR and CO Catalyst Systems.	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 8	During the commissioning period, the owner/operator shall demonstrate compliance with conditions 10 through 12 through the use of properly operated, and maintained continuous emission monitors and data recorders for the following parameters: firing hours for the gas turbine and HRSG fuel flow rates through the trainstack gas nitrogen oxide (and oxygen) emission concentrations at P-60/P-62stack gas carbon monoxide emission concentrations P-60/P-62stack gas SO2 emission concentrations at P-60/P-62 or fuel TRS/H2S concentrations. The monitored parameters shall be recorded at least once every 15 minutes (excluding calibration periods as required by the MOP or when the monitored source is not in operation) for the Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033). The owner/operator shall use District-approved methods to calculate heat input rates, NOx mass emission rates, carbon monoxide mass emission rates, SOx mass emission rates, and emission concentrations of NOx, SOx, and CO, summarized for each clock hour and each calendar day. All	Y	Date
	records shall be retained on site for at least 5 years from the date of entry and made available to District personnel upon request.		
Part 9	The District-approved continuous emission monitors specified in condition 8 shall be installed, calibrated, and operational prior to first firing of the Gas Turbines (S-1030 or S-1032) and Heat Recovery Steam Generator (S-1031 or S-1033). After first firing of the turbine, the detection range of these continuous emission monitors shall be adjusted as necessary to accurately measure the resulting range of CO, SOx, and NOx emission concentrations. The type, specifications, and location of these monitors shall be subject to District review and approval.	Y	
Part 10	The total number of firing hours of S-1030/S-1032 Gas Turbines and S-1031/S-1033 Heat Recovery Steam Generators without abatement of nitrogen oxide emissions by A-60/A-62 SCR System and/or A-61/A-63 Oxidation Catalyst System shall not exceed 250 hours for each turbine and associated HRSG train during the commissioning period. Such operation of S-1030/S-1032 Gas Turbine and S-1031/S-1033 HRSG without abatement shall expire.	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 11	The total mass emissions of nitrogen oxides, carbon monoxide, precursor organic compounds, PM10, and sulfur dioxide that are emitted by the Gas Turbines (S-1030 and S-1032) and Heat Recovery Steam Generators (S-1031 and S-1033) during the commissioning period shall accrue towards the consecutive twelve-month emission limitations specified in condition 22.	Y	
Part 12	Combined pollutant mass emissions from the Gas Turbine (S-1030 and S-1032) and Heat Recovery Steam Generators (S-1031 and S-1033) shall not exceed the following limits during the commissioning period. These emission limits shall include emissions resulting from the start-up and shutdown of the Gas Turbines and HRSGs (S-1030, S-1031, S-1032 & S-1033).NOx (as NO2) 360.34 pounds per calendar day CO 513.216 pounds per calendar day POC (as CH4) 97.776 pounds per calendar dayPM10 224.08 pounds per calendar daySO2 516 pounds per calendar day	Y	
Part 13	The Gas Turbines (S-1030 and S-1032) and HRSG Duct Burners (S-1031 and S-1033) shall be fired on refinery fuel and/or natural gas. (Basis: BACT for SO2 and PM10)	Y	
Part 14	The Gas Turbines (S-1030 and S-1032) and HRSG Duct Burners (S-1031 and S-1033) shall be fired on refinery fuel and/or natural gas. (Basis: BACT for SO2 and PM10)	Y	
Part 15	The combined heat input rate to the power train consisting of a Gas Turbine and its associated HRSG (S-1030 and S-1031 or S-1032 and S-1033) shall each not exceed 19,440 MM Btu per calendar day. (Basis: Cumulative Increase, Permit Fees, Modification, Offsets)	Y	
Part 16	The combined cumulative heat input rate for each power training consisting of Phase I (S-1030 and S-1031) or Phase II (S-1032 and S-1033) shall not exceed 6,351,000 MM Btu per year. (Basis: Offsets, Cumulative Increase, Modification)	Y	
Part 17	S-1030/S-1032 Gas Turbines and S-1031/S-1033 HRSGs shall be abated by the properly operated and properly maintained A-60/A-62 Selective Catalytic Reduction (SCR) System and A-61/A-63 CO Oxidation Catalyst System whenever fuel is combusted at those sources and the catalyst bed has reached minimum operating temperature as designated by the manufacturer. (Basis: BACT for NOx)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 18	The Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033) when firing natural gas exclusively shall comply with requirements (a) through (f) under all operating scenarios, including duct burner firing mode. Requirements (a) through (f) do not apply during a start-up or shutdown mode. (Basis: BACT, PSD, and Toxic Risk Management Policy)	Y	
Part 18(a)(1)	Emissions of nitrogen oxides (NOx) at emission points P-60 or P-62 shall not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period.(Basis: BACT for NOx when firing natural gas)	Y	
Part 18(a)(2)	After the first 3 hours of operation of the Phase II Cogeneration Unit on natural gas exclusively during a changeover from refinery gas, the Owner/Operator shall limit the emissions of nitrogen oxides (NOx) at emission point P-62 to no more than 2.0 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. During this three hour transition period, the Emissions of nitrogen oxides (NOx) at emission point P-62 shall not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. (Basis: Phase II BACT for NOx when firing natural gas)	Y	
Part 18(b)	The carbon monoxide emissions concentration at P-60 or P-62 shall not exceed 6 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-clock hour period. (Basis: BACT for CO when firing natural gas)	Y	
Part 18(c)	Ammonia (NH3) emission concentrations at P-60 or P-62 shall not exceed 10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-hour period. (Basis: Toxics)	Y	
Part 18(d)	Ammonia (NH3) emission concentrations at P-60 or P-62 shall not exceed 10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-hour period. (Basis: Toxics)	Y	
Part 18(e)	For sulfur dioxide (SO2) emissions, the sulfur content in the natural gas shall not exceed 1.0 grain per 100 scf of natural gas. The owner shall use standard pipeline quality natural gas as supplied by PG&E. Compliance will be demonstrated in accordance with condition # 35. (Basis: BACT for SO2 when firing natural gas),	Y	
Part 18(f)	For particulate (PM10) emissions, the sulfur content in the natural gas shall not exceed 1.0 grain per 100 scf of natural gas. The owner shall use standard pipeline quality natural gas as supplied by PG&E. Compliance will be demonstrated in accordance with condition # 35. (Basis: BACT for PM10 when firing natural gas)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 19	The Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033)	Y	
	shall comply with requirements (a) through (h) under all operating		
	scenarios, including duct burner firing mode. Requirements (a) through (h)		
	do not apply during a start-up or shutdown mode. (Basis: BACT, PSD, and Toxic Risk Management Policy)		
Part 19(a)	Emissions of nitrogen oxides (NOx), calculated in accordance with District		Y
1 att 19(a)	approved methods as NO2, at P-60 (the combined exhaust point for the		1
	S-1030 Gas Turbine and the S-1031 HRSG after abatement by A-60 SCR		
	System) or P-62 (the combined exhaust point for the S-1032 Gas Turbine		
	and the S-1033 HRSG after abatement by the A-62 SCR system) shall not		
	exceed 7.29 pounds per clock hour. (Basis: BACT for NOx, Offsets)		
Part 19(b)	Emissions of nitrogen oxides (NOx) at emission points P-60 or P-62 shall	Y	
1 att 19(0)	not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over	1	
	any 3-clock hour period(Basis: BACT for NOx)		
Part 19(c)	Carbon monoxide mass emissions at P-60 or P-62 shall not exceed 10.692	Y	
Tart 17(c)	pounds per clock hour, averaged over any rolling 3-hour period (Basis:	1	
	PSD for CO)		
Part 19(d)	The carbon monoxide emission concentration at P-60 or P-62 shall not	Y	
	exceed 6 ppmv, on a dry basis, corrected to 15% O2, averaged over any		
	rolling 3-clock hour period. (Basis: BACT for CO)		
Part 19(e)	Ammonia (NH3) emission concentrations at P-60 or P-62 shall not exceed	Y	
	10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling		
	3-hour period. (Basis: Toxics)		
Part 19(f)	Precursor organic compound (POC) mass emissions (as CH4) at P-60 or	Y	
	P-62 shall not exceed 2.037 pounds per hour. Demonstration of		
	compliance will be based on source test results. (Basis: BACT)		
Part 19(g)	Sulfur dioxide (SO2) mass emissions at P-60 or P-62 shall not exceed 10.75	Y	
	pounds per hour (rolling 24 hour average). Sulfur concentrations in refinery		
	fuel gas shall not exceed 35 ppm TRS (rolling consecutive 365 day		
	average). (Basis: BACT) Sulfur concentrations in fuel gas fired in S-1030,		
	S-1031, S-1032 and		
	S-1033 shall not exceed 100 ppm TRS (rolling 24 hour average). (Basis:		
	BACT) Hydrogen sulfide (H2S) concentrations in refinery fuel gas shall		
	not exceed 160 ppm (rolling consecutive 3-hour average). (Basis: NSPS)		

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 19(h)	The Owner/Operator shall limit the particulate matter (PM10) massemissions from P-60 or P-62 to no more than 4.65 pounds per hour averaged over any consecutive 24-hours nor 1.55 pounds per hour averaged over a calendar year. This limit is subject to adjustment based on the results of source tests, in no case, however, may the adjusted limit exceed 4.65 lb/hr averaged over any consecutive 24-hours. Demonstration of compliance will be based on source test results. (Basis: BACT for PM10)	Y	
Part 20	The sulfuric acid emissions (SAM) from P-60 and P-62 combined shall be less than 7 tons in any consecutive four quarters. (Basis: PSD)	Y	
Part 21	A District approved initial source test will be commenced within 60 days of startup to demonstrate compliance with the NOx, CO, POC, TRS, SO2, PM10, NH3, and SAM levels in Conditions number 18, 19 or 20. For purposes of SAM, the applicant shall also test for SO3 and ammonium sulfates. The test results shall be forwarded to the District within 60 days of completion of the field test. The test should verify emission compliance at 80% or more of maximum firing on: 1. Gas Turbine firing natural gas only 2. Gas Turbine and HRSG firing natural gas only 3. Gas Turbine firing refinery fuel gas only 4. Gas Turbine and HRSG firing refinery fuel gas only. (Basis: PSD, BACT, TRMP, )	Y	
Part 22	Total emissions from each power train consisting of Phase I and Phase II (S-1030, S-1031, S-1032 and S-1033) shall not exceed the following annual limits (365 day rolling average): (Basis: Cumulative Increase, Offsets, PSD)	Y	
Part 22(a)	Phase I (S-1030 and S-1031)NOx - 28.603 TPY (based on CEM data) POC - 8.579 TPY (based on Gas Turbine/HRSG POC emissions of 7.983 TPY plus fugitive emissions of 0.596 TPY)SOx - 15.0 (based on TRS measurement)CO - 41.9285 TPY (based on CEM data)PM10 - 6.803 TPY (based on source test results)Phase II (S-1032 and S-1033) NOx - 28.603 TPY (based on CEM data)POC - 8.332 TPY (based on Gas Turbine POC emissions of 7.983 TPY plus fugitive emissions of 0.349 TPY)SOx - 15.0 (based on TRS measurement)CO - 41.9285 TPY (based on CEM data)PM10 - 6.803 TPY (based on source test results)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 22(b)	The PM10 emissions may be adjusted based on source test results for	Y	
	S-1030, S-1031, S-1032 and S-1033) if the particulate emission rate exceeds		
	wet cooling tower, shall not exceed a project total of 15.477 tons per year		
	of PM10. The Cogeneration project increase in PM10 is limited to the		
	available offsets for the proposed project, i.e. the contemporaneous		
	emission reductions from the shutting down of three boilers (S-38, S-39 and		
	S-41). The owner shall submit a new application for any increase in PM10		
	beyond the allowable level. (Basis: Cumulative Increase, Offsets)		
Part 22(c)	The PM10 emissions may be adjusted based on the use of recycled water in the exempt wet cooling tower instead of fresh water. In no case shall the adjustment when added to the assumed PM10 level on fresh water exceed the total of 3.8 tons per year for the wet cooling tower (restricted to toxic risk values). This adjustment along with the allowable adjustment in Condition 22(b) shall not exceed a combined total of 10.919 tons/year in Phase I or 15.477 tons/year for both phases. The Cogeneration project increase in PM10 is limited to the available offsets for the proposed project, i.e. the contemporaneous emission reductions from the shutting down of three boilers (S-38, S-39 and S-41). The owner shall submit a new application for any increase in PM10 beyond the allowable level. (Basis:	Y	
	Cumulative Increase, Offsets)		
Part 22(d)	The owner shall prepare an annual calendar-year report and submit it to the District documenting compliance with these annual limitations on mass emissions. The report shall be submitted to the District no later than 60 days after the close of the calendar year. (Basis: Compliance Monitoring)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 23	To demonstrate compliance with conditions 19(f), 19(g),19(h), 20 and parts of 22, the owner/operator shall calculate and record on a daily basis, the Precursor Organic Compound (POC) mass emissions, Fine Particulate Matter (PM10) mass emissions (including condensable particulate matter), Sulfuric Acid Mist (SAM) and Sulfur Dioxide (SO2) mass emissions from each power train. The owner/operator shall use the actual Heat Input Rates and District-approved emission factors to calculate these emissions. The calculated emissions shall be presented as follows:(a) For each calendar day, POC, PM10, SAM and SO2 emissions shall be summarized for the combined power train: [Gas Turbine (S-1030)/HRSG (S-1031)] and/or [Gas Turbine (S-1032)/HRSG (S-1033)](b) On a daily basis, the 365 day rolling average cumulative total POC, PM10, SAM and SO2 mass emissions, for both power trains: Gas Turbine (S-1030)/HRSG (S-1031) and/or Gas Turbine (S-1032)/HRSG	Y	
Part 24	(S-1033).(Basis: Offsets, PSD, Cumulative Increase)  The owner/operator shall obtain approval for all source test procedures from dates at least 7 days prior to the testing date(s). As indicated above, the Owner/Operator shall measure the contribution of condensable PM (back half) to the total PM10 emissions. However, the Owner/Operator may propose alternative measuring techniques to measure condensable PM such as the use of a dilution tunnel or other appropriate method used to capture semi-volatile organic compounds. Source test results shall be submitted to the District within 60 days of conducting the tests. (Basis: Offsets, PSD, cumulative increase)	Y	
Part 25	The owner/operator shall submit all reports (including, but not limited to monthly CEM reports, monitor breakdown reports, emission excess reports, equipment breakdown reports, calculated compliance records, etc.) as required by District Rules or Regulations or through permit conditions, and in accordance with all procedures and time limits specified in the Rule, Regulation, Manual of Procedures, or Enforcement Division Policies & Procedures Manual. (Basis: Regulation 2-6-502)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 26	The owner/operator shall maintain all records and reports on site for a minimum of 5 years. These records shall include but are not limited to: continuous monitoring records (firing hours, fuel flows, emission rates, monitor excesses, breakdowns, etc.), source test and analytical records, natural gas sulfur content analysis results, emission calculation records, records of plant upsets and related incidents. The length of time, description and quantity of excess emissions associated with breakdowns shall be included in the recordkeeping requirements. The owner/operator shall make all records and reports available to District and the CEC CPM staff upon request. (Basis: Regulation 2-6-501)	Y	
Part 27	The owner/operator shall notify the District of any violations of these permit conditions consistent with the requirements of the Title V permit (Basis: Regulation 2-1-403)	Y	
Part 28	The stack height of emission points P-60 and P-62-shall each be at least 80 feet above grade level at the stack base. (Basis: PSD, TRMP)	Y	
Part 29	The Owner/Operator shall provide adequate stack sampling ports and platforms to enable the performance of source testing. The location and configuration of the stack sampling ports shall be subject to BAAQMD review and approval. (Basis: Regulation 1-501)	Y	
Part 30	Within 180 days of the issuance of the Authority to Construct, the Owner/Operator shall contact the BAAQMD Technical Services Division regarding requirements for the continuous monitors, sampling ports, platforms, and source tests required. All source testing and monitoring shall be conducted in accordance with the BAAQMD Manual of Procedures. (Basis: Regulation 1-501)	Y	
Part 31	The startup period for the Gas Turbines/HRSGs shall last for no more than the period defined in the Startup Mode. [Basis: Cumulative Increase, Toxics]	Y	
Part 33	Pursuant to 40 CFR Part 72.30(b)(2)(ii) of the Federal Acid Rain Program, the owner/operator of the Valero Power Plant shall not operate Phase II of the cogeneration project until either: 1) a Title IV Operating Permit has been issued; 2) 24 months after a Title IV Operating Permit Application has been submitted, whichever is earlier. (Basis: Regulation 2, Rule 7)	Y

BAAQMD Condition # 19466			
Part 2c	The Permit Holder shall conduct an annual District-approved source test on the S-160, Seal Oil Sparger, to demonstrate compliance with Regulation 8-2-301. The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 8-8-302-32-6-503]	Y	4/01/04
Part 3	The Owner/Operator shall monitor and record on a monthly basis the visible emissionsfrom Sources S-1, S-2, S-8, S-10, S-11, S-12, S-160, S-176, S-233and S-237 to demonstrate compliance with Regulation 6-301 (Ringlemann 1 or 20% opacity). These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-301]	Y	4/01/04
Part 7	he Owner/Operator shall perform an annual source test on Sources S-8,S-10, S-11, S-12, S-160, S-176 and S-233 to demonstrate compliance with Regulation 6-310 (outlet grain loading no greater than 0.15 grain/dscf). ForS-11, S-160 and S-233 only, the Owner/Operator shall submit a source testplan and procedure to the Manager of Source Test for approval by April 1, 2004. The first source test shall commence for S-11, S-160 and S-233 no more thanone year from the date of the S-11, S-160 and S-233 source test plan andprocedure is approved. The Owner/Operator shall submit the test results tothe District's Compliance and Enforcement Division and the District's PermitServices Division no less than 45 days after the test. These records shall be keptfor a period of at least 5 years from date of entry and shall be made available to District staff upon request. For S-10 and S-12 only, this annual source test is required only when these sources are	Y	4/01/04

Permit			
10574, Part 12	TheOwner/Operator shall limit the total fugitive POC emissions from all new and modified equipment installed as a result of the Clean Fuels Project, which includes Sources S-1020 through S-1024, S-1026, S-220, S-227, S-1007, S-1011, S-1014 and S-151 to no more than 20.8 tons in any rolling 365 consecutive day period. This total may be adjusted by the District in accordance with the provisions of Part # 9. [Basis: Cumulative Increase]	Y	
10574, Part 51	The total daily throughput of alkylate from the Alkylation Unit (S-1007) shall not exceed 22,800 barrels per day (Basis: BACT, Cumulative Increase)	Y	
10574, Part 52	The Alkylate Production Project in Application 3782, when installed, shall consist of no more than 100 valves, 200 connectors/flanges, 2 pressure relief valves and 3 pumps. The POC emissions from the entire project shall not exceed 0.174 ton/year. The annual mass limit for POC may be adjusted based on the final fugitive component count. Any additional POC offsets required due to a larger fugitive component count would need to be provided prior to permit issuance. (Basis: Cumulative Increase, Offsets)	Y	
18043, Part 1	Total fugitive POC emissions from the MTBE Phaseout Project (combined from S-1007, S-1014, and S-1012) shall not exceed 0.571 ton in any rolling 12 consecutive month. The owner/operator shall submit a revised pump, valve and flange count within 15 days of start up in order to show compliance with this permit condition. If fugitive emissions from the source exceed 0.571 ton/yr, then the District may adjust the cumulative increase attributable to this permit application before the issuance of the Permit to Operate. [Basis: Cumulative Increase, Toxics]	Y

BAAQMD Condition #			
Part 1	The Permit Holder shall provide the District with access to all crude lightering operations conducted in the San Francisco Bay and to be delivered to the Benicia Refinery for which Permit Holder, SeaRiver shipping, or any other affiliated company is responsible. Access to lightering operations shall be provided via the regularly scheduled water-taxi service. [Basis: Banked POC Credits]	Y	
Part 2	The Permit Holder shall provide a listing and voyage history for all ships delivering crude to the Benicia Refinery, calculate emissions using the emission factors and condition #6, provide pressure charts required in condition #8, and submit a report on a quarterly basis to the district. [Basis: Reporting, Compliance Verification]	Y	
Part 3	On a quarterly basis, the Permit Holder shall provide the district with copies of all U.S. Army Corporation of Engineers form 3925 for all material transferred by or for Permit Holder in the San Francisco Bay for delivery to the Benicia Refinery. [Basis: Reporting]	Y	
Part 4	On a quarterly basis, the Permit Holder shall provide verification of each controlled transfer. [Basis: Reporting]	Y	
Part 5	The Permit Holder shall limit all lightering emissions of crude delivered to the Benicia Refinery to 48 tons per year. [Basis: Banked POC Credits]	Y	
Part 6	The Permit Holder shall use the following emission factors:  Controlled, lb/103 gal  Ships- Barges- Uncontrolled, lb/mgal Ships- Barges- 1.0  [Basis: Banked POC Credits]	Y	
Part 7	The highest pressure developed during the lightering shall not exceed 80% of the lowest relief valve set pressure of either vessel involved in the	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
	transfer. Pressure excursions not exceeding 15 minutes cumulative duration during a lightering transfer and not causing lifting of any pressure relief device shall be allowed. [Basis: VOC Minimization]		
Part 8	The pressure developed in the vessel tanks during lightering shall be continuously recorded while the vessel is in District waters. [Basis Banked POC credits]	Y	
Part 9	The tanks of all vessels involved in a lightering operation using the controlled emission factors shall be tested to verify that there is no leakage at 80% of the lowest relief valve set pressure at least once every three years. This test shall be done at the completion of refurbishing ("Dry Dock") and shall test the entire system, manifold, pressure relief valves, hatch covers, etc. an OVA, bubble test, or other equivalent procedure approved by the APCO may be used. [Basis: VOC Minimization]	Y	
Part 10	During controlled lightering operations, both vessels' inert gas systems shall be isolated from the vapor space of the cargo tanks. If inert gas is generated during the transfer of cargos, the emissions for that transfer shall be calculated using the uncontrolled emissions factors. If Permit Holder can demonstrate that emissions were partially controlled, to the satisfaction of the APCO, emissions less than uncontrolled may be allowed. [Basis: Cumulative Increase]	Y	
Part 11	A fugitive emissions maintenance program will be implemented on each lighter vessel used by Permit Holder. A complete survey of all above-deck equipment will be performed by Permit Holder once per quarter. [Basis: Cumulative Increase]	Y	
Part 12	Using an OVA, bubble test, or other procedure approved by the APCO, a survey of all in-service pressure relief valves on both vessels will be conducted prior to completion of 20% of the cargo transfer and repeated at least once after transferring 60% of the cargo. A leak shall be defined as a reading in excess of 10,000 ppmv, as methane. All readings in excess of 10,000 ppmv, as methane, shall be noted by source and maximum concentration. If any leak cannot be repaired, or valve removed from service, within 15 minutes of detection, the uncontrolled emission factors of condition #6 shall be used to calculate emissions for the entire lightering event. If Permit Holder can demonstrate that emissions were partially controlled, to the satisfaction of the APCO, emissions less than uncontrolled may be used. All survey results shall be summarized in the report required by condition #2. [Basis: RACT]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 13	Vessels involved in controlled lightering events shall not perform an operations that result in venting crude oil cargo vapors in District waters. These operations include as example: open cargo inspections, open gauging, gas freeing of tanks for maintenance or inspection, or venting of ballast loading emissions. When any such venting operation is required, the circumstances of the incident will be logged, along with pertinent information such as tank volume, contents, and pressure before an after venting. The uncontrolled emission factors of condition #6 shall be used to calculate emissions for the entire loading operation. If Permit Holder can demonstrate that emissions were partially controlled, to the satisfaction of the APCO, emissions less than uncontrolled may be used. These emissions will be added to the emissions calculations and reported under condition #2. [Basis: Cumulative Increase]	Y	
BAAQMD Condition # 1709			
Part 1	The Permit Holder shall limit the total non-methane hydrocarbon emissions due to gasoline (mogas) loading across the marine dock to 43.4 tons/yr excluding shore-side fugitive emissions. [Basis: Cumulative Increase]	Y	
Part 2	The organic emissions shall be calculated as the sum of the volume of gasoline loaded on each vessel multiplied by the appropriate emission factor listed below. [Basis: Cumulative Increase]  Uncontrolled  Ib voc/1000 gal  Ship  1.80  0.22  Barge  3.40  0.30		
Part 3	The John Zink abatement system, A-29, shall be designed for at least 95%, by weight abatement efficiency or the VOC emissions shall not exceed 2 lb/1,000 bbl loaded (non-methane). [Basis: Cumulative Increase]	Y	
Part 4	The Permit Holder shall maintain a log of each mogas loading across the dock, listing the date, vessel loaded, relief valve set pressure, maximum pressure developed, loading interval (time), and amount and type of material loaded. [Basis: Cumulative Increase]	Y	
Part 5	The Permit Holder shall install a continuous emission monitor and recorder for mass VOC emission at A-29 discharge emission point, unless Permit Holder can demonstrate to the satisfaction of the APCO that a concentration measurement alone will provide assurance of compliance	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
-	with condition 3. [Basis: Cumulative Increase]		
Part 6	The Permit Holder shall maintain a continuous pressure recording of all controlled gasoline (mogas) loading. [Basis: Cumulative Increase]	Y	
Part 7	The Permit Holder shall submit a quarterly report of daily loadings and emissions on a District approved format. [Basis: Cumulative Increase]	Y	
Part 8	Any vessel loading that develops a pressure exceeding 80% of the lowest relief valve set pressure shall be considered uncontrolled. The uncontrolled emission factor in condition 2 shall be used to determine the emissions from such loading operations. If Permit Holder can demonstrate that the emissions were partially controlled to the satisfaction of the APCO, emissions less than uncontrolled will be considered. [Basis: Cumulative Increase]	Y	
Part 9	Permit Holder shall test for gas leakage at all vessels used in controlled loading more than twice per year. This testing shall be conducted both prior and after refurbishing. The time between testing shall not exceed 36 months. Each test shall include the leakage rate in barrels per hour at 80% of the lowest relief valve set pressure and the set pressure for each relief valve. This test shall determine the leakage from the entire system, tanks, relief valves, vapor collection, hatch covers and etc. [Basis: Cumulative Increase]	Y	
Part 10	Permit Holder shall test for gas leakage at all vessels used in controlled loading more than twice per year. This testing shall be conducted both prior and after refurbishing. The time between testing shall not exceed 36 months. Each test shall include the leakage rate in barrels per hour at 80% of the lowest relief valve set pressure and the set pressure for each relief valve. This test shall determine the leakage from the entire system, tanks, relief valves, vapor collection, hatch covers and etc. [Basis: Cumulative Increase]	Y	
Part 11	If the calculations required by condition 10 result in exceeding condition 1, the Permit Holder shall reduce their emissions across the marine dock by 110% of the excess for the next calendar year. [Basis: Cumulative Increase]	Y	
Part 12	The Permit Holder shall conduct a leak test on all vessel relief valves, hatch covers, gauging connections and any other potential leaking points for every vessel used in vapor- controlled loading more than twice per year.  Testing shall be done on an average of every ten loads for each vessel.  Testing shall be done during loading operations. If any emission point that	Y

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
	reads greater than 10,000 ppm (as methane) as determined by a portable hydrocarbon analyzer (OVA), that load shall be considered uncontrolled. All subsequent loads by that vessel shall also be considered uncontrolled until a leak test result lower than 10,000 ppm is achieved. Leak test results shall be submitted to the BAAQMD with each quarterly report. Concentrations shall be read I centimeter downstream of any discharge point. If Permit Holder can demonstrate that the emissions were partially controlled to the satisfaction of the APCO, emissions less than uncontrolled will be considered. [Basis: RACT, Cumulative Increase]		
Part 16	The Permit Holder shall provide access and an opportunity for the APCO to verify operation of all controlled loadings. [Basis: Cumulative Increase]	Y

8-8-601	Wastewater Analysis for Critical OCs	Y	
BAAQMD Condition # 10574			
Part 1	Any new pump installed in light liquid hydrocarbon service as part of the Clean Fuels Project (CFP) shall be equipped with any sealless pump technology approved by the APCO or one of the following approved BACT technologies: [Basis: Cumulative Increase, offsets, Toxics]a) equipped with dual mechanical seals, having a heavy liquid barrier fluid. The barrier fluid reservoir shall be vented to a control device having at least 95% control efficiency, or the barrier fluid shall be operated at a pressure higher than the process stream pressure. b) equipped with a "canned" pump. c) equipped with a magnetically driven pump.	Y	
Part 4	All hydrocarbon flow control valves installed as part of the Clean Fuels Project shall be equipped with live loaded packing systems and polished stems, or equivalent. [Basis: BACT]	Y	
Part 5	Except as required by Condition number 4, all other hydrocarbon valves greater than 2 inches installed as part of the CFP shall be one of the following types: (1) bellows sealed, (2) live loaded, (3) graphitic-packed, (4) teflon packed valves or (5) equivalent. [Basis: BACT]	Y	
Part 7	All flanges installed in the piping systems as a result of the CFP shall be equipped with graphitic- based gaskets, except in services that are not compatible with graphitic material. Asbestos type gaskets shall be used in service where graphitic-based gaskets are not compatible. [Basis: BACT, Offsets, Cumulative Increase, Toxics]	Y	
Part 10	The pressure relief valves, installed as part of the CFP, in gaseous POC and light liquid service shall be vented to the gas recovery system, or an equivalent control device approved by the District (equivalent does not include rupture disk and/or soft-seat, if vented to atmosphere). This condition does not apply to pressure relief valves on storage tanks or ressure relief valves that handle only low vapor pressure organic liquids (< 0.5 psia). [Basis: BACT]	Y

Subpart CC			
40 CFR 63.640(o)(1)	Overlap: Sources subject to NESHAPS (MACT) Subpart CC and NSPS Subpart QQQ are only required to comply with Subpart CC	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
	provisions		
BAAQMD Condition # 13319			
Part 1	The emissions of nitrogen oxides (NOx) shall not exceed 25 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method [Basis: BAAQMD 2-2-112]	Y	
Part 2	The emissions of carbon monoxide (CO) shall not exceed 50 ppm, byvolume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)	Y	
Part 3	The VOC destruction efficiency of the A-57 Thermal Oxidizer shall be no less than 98.5%, by weight. (Basis: NSPS and NESHAPS)	Y	
Part 4	The Owner/Operator shall maintain the oxidation temperature of A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum temperature) as averaged over any consecutive 3-hour period. If source test data demonstrate that an alternate temperature is necessary for maintaining compliance with Part #3, the Owner/Operator shall maintain the oxidation temperature at or above the minimum temperature limit, averaged over any consecutive 3-hour period, as determined by the source test. (Basis: Regulation 2-1-403	Y	
Part 5	The A-57 Thermal Oxidizer shall be equipped with a temperature measuring device capable of continuously measuring and recording the outlet temperature in A-57. [Basis: NSPS]	Y	
Part 6	This device shall be accurate to within 20 degrees Fahrenheit (°F) and shall be maintained in accordance with manufacturer's recommendations. This temperature monitor shall be used to determine compliance with the temperature requirement in Condition 4. (Basis: Regulation 1-521)	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 8	No later than 30 days after startup, the Owner/Operator shall conduct a BAAQMD approved source test to determine compliance with the NOx, CO, and VOC limitations. All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance	Y	Date
Part 9	Verification)  The total combined influent of wastewater to be treated at anytime by S-194, S-195, S-197 and S-198 shall not exceed 3000 gallons per minute.  [Basis: Cumulative Increase]	Y	
Part 10	A flow indicator or equivalent device shall be installed on the vent streamto the control equipment to ensure that the vapors are being routed to the equipment. [Basis: NSPS]	Y	
Part 11	The operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]	Y	
Part 14	These sources shall be abated by two 700 lb (minimum) carbon canisters in series(A-37) and/or the A-57 Thermal Oxidizer at all times when the source is in service, except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]	Y	
Part 15	The total combined non-methane hydrocarbons (NMHC) emissionsemitted from A-36, A-37 and A-57 shall not exceed 15 pounds per day, as averaged over one month. [Basis: Cumulative Increase]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 16	NMHC shall be determined from the continuously monitored flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When recommissioning A-37 from standby service, A-37 carbon shall be replaced weekly until the continuous VOC monitor on A-37 outlet is operating. [Basis: Cumulative Increase]	Y	
Part 17	To demonstrate compliance with Condition 15, the following records shall be maintained in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating. [Basis: Cumulative Increase]  a. Daily NMHC emission rate in pounds per day.  b. Daily NMHC emission rate, as averaged over one month in pounds per day.  c. Daily flow rate and outlet NMHC concentration.  d. Carbon canister changeout date.  e. Total volume of gas recorded between carbon canister changeout.	Y	
Part 18	A monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream shall be used. [Basis: Cumulative Increase]	Y

NESHAPS Title 40 Part 63 Subpart CC	NESHAPS for Petroleum Refineries (06/12/199606/23/2003)		
40 CFR 63.640(o)(1)	Overlap: Sources subject to NESHAPS (MACT) Subpart CC and NSPS Subpart QQQ are only required to comply with Subpart CC provisions	Y	
BAAQMD Condition # 13319			
Part 1	The emissions of nitrogen oxides (NOx) shall not exceed 25 ppm, by	Y	
	volume, dry, corrected to 3% oxygen, as determined by the applicable		
	BAAQMD Source Test Method [Basis: BAAQMD 2-2-112]		
Part 2	The emissions of carbon monoxide (CO) shall not exceed 50 ppm,	Y	
	byvolume, dry, corrected to 3% oxygen, as determined by the applicable		
	BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)		
Part 3	The VOC destruction efficiency of the A-57 Thermal Oxidizer shall be no	Y	
	less than 98.5%, by weight. (Basis: NSPS and NESHAPS)		
Part 4	The Owner/Operator shall maintain the oxidation temperature of A-57	Y	
	Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum		
	temperature) as averaged over any consecutive 3-hour period. If source test		
	data demonstrate that an alternate temperature is necessary for maintaining		
	compliance with Part #3, the Owner/Operator shall maintain the oxidation		
	temperature at or above the minimum temperature limit, averaged over any		
	consecutive 3-hour period, as determined by the source test. (Basis:		
	Regulation 2-1-403		
Part 5	The A-57 Thermal Oxidizer shall be equipped with a temperature measuring	Y	
	device capable of continuously measuring and recording the outlet		
	temperature in A-57. [Basis: NSPS]		

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 6	This device shall be accurate to within 20 degrees Fahrenheit (°F) and shall be maintained in accordance with manufacturer's recommendations. This temperature monitor shall be used to determine compliance with the temperature requirement in Condition 4. (Basis: Regulation 1-521)	Y	
Part 8	No later than 30 days after startup, the Owner/Operator shall conduct a BAAQMD approved source test to determine compliance with the NOx, CO, and VOC limitations. All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance Verification)	Y	
Part 9	The total combined influent of wastewater to be treated at anytime by S-194, S-195, S-197 and S-198 shall not exceed 3000 gallons per minute.  [Basis: Cumulative Increase]	Y	
Part 10	A flow indicator or equivalent device shall be installed on the vent streamto the control equipment to ensure that the vapors are being routed to the equipment. [Basis: NSPS]	Y	
Part 11	The operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]	Y	
Part 14	These sources shall be abated by two 700 lb (minimum) carbon canisters in series(A-37) and/or the A-57 Thermal Oxidizer at all times when the source is in service, except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]	Y	
Part 15	The total combined non-methane hydrocarbons (NMHC) emissionsemitted from A-36, A-37 and A-57 shall not exceed 15 pounds per day, as averaged over one month. [Basis: Cumulative Increase]	Y	

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date
Part 16	NMHC shall be determined from the continuously monitored flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When recommissioning A-37 from standby service, A-37 carbon shall be replaced weekly until the continuous VOC monitor on A-37 outlet is operating. [Basis: Cumulative Increase]	Y	
Part 17	To demonstrate compliance with Condition 15, the following records shall be maintained in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating. [Basis: Cumulative Increase]  f. Daily NMHC emission rate in pounds per day.  g. Daily NMHC emission rate, as averaged over one month in pounds per day.  h. Daily flow rate and outlet NMHC concentration.  i. Carbon canister changeout date.  j. Total volume of gas recorded between carbon canister changeout.	Y	
Part 18	A monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream shall be used. [Basis: Cumulative Increase]	Y

#### Notes:

- (1) Per 63.640 (p), equipment leaks that are also subject to Part 60 (NSPS) and Part 61 (NESHAPS) are only required to comply with Part 63 (MACT).
- (2) Part 61 Subparts J and V apply only to the fugitive components on the MRU Heartcut Stream located between the Heartcut Tower and the Heartcut Saturation Unit, upstream of the recycle stream (>10 weight. % benzene).
- (3) Per 63.640(o)(1), equipment that is also subject to Part 60 (NSPS) Subpart QQQ is only required to comply with Part 63 (MACT) wastewater provisions (Part 61 Subpart FF).
- (4) This table lists only those permit conditions related to fugitive sources or fugitive monitoring. See source-specific Table IV's for all other permit conditions for each source.

BAAQMD Condition # 10574			
Part 1	Any new pump installed in light liquid hydrocarbon service as part of the Clean Fuels Project (CFP) shall be equipped with any sealless pump technology approved by the APCO or one of the following approved BACT technologies: [Basis: Cumulative Increase, Offsets, Toxics]	Y	
	a) equipped with dual mechanical seals, having a heavy liquid barrier fluid. The barrier fluid reservoir shall be vented to a control device having at least 95% control efficiency, or the barrier fluid shall be operated at a pressure higher than the process stream pressure.		
	b) equipped with a "canned" pump.		
	c) equipped with a magnetically driven pump.		
Part 4	All hydrocarbon flow control valves installed as part of the Clean Fuels Project shall be equipped with live loaded packing systems and polished stems, or equivalent. [Basis: BACT]	Y	
Part 5	Except as required by Condition number 4, all other hydrocarbon valves greater than 2 inches installed as part of the CFP shall be one of the following types: (1) bellows sealed, (2) live loaded, (3) graphitic- packed, (4) teflon packed valves or (5) equivalent. [Basis: BACT]	Y	

Applicable Requirement	Regulation Title or Description of	Federally Enforceable (Y/N)	Future Effective Date
Part 7	All flanges installed in the piping systems as a result of the CFP shall be equipped with graphitic-based gaskets, except in services that are not compatible with graphitic material.  Asbestos type gaskets shall be used in service where graphitic-based gaskets are not compatible. [Basis: BACT, Offsets, Cumulative Increase, Toxics]	Y	
Part 8	All new hydrocarbon centrifugal compressors installed as part of the CFP shall be equipped with "wet" dual mechanical seals with a heavy liquid barrier fluid, or dual dry gas mechanical seals buffered with inert gas. All reciprocating compressors installed in hydrocarbon service as part of the CFP shall be vented to a control device having at least a 95%; control efficiency Any new compressor in hydrocarbon service with less than 50% hydrogen must comply with the applicable standards of NSPS 40 CFR 60, Subpart GGG. [BACT, Offsets, Cumulative Increase, Toxics, NSPS]	Y	
Part 10	The pressure relief valves, installed as part of the CFP, in gaseous POC and light liquid service shall be vented to the gas recovery system, or an equivalent control device approved by the District (equivalent does not include rupture disk and/or soft-seat, if vented to atmosphere). This condition does not apply to pressure relief valves on storage tanks or pressure relief valves that handle only low vapor pressure organic liquids (< 0.5 psia). [Basis: BACT]	Y	
Part 11	All process drains installed as part of the CFP shall be fitted with a "P", trap sealing system which inhibit POC emissions from the process wastewater system from escaping through the drain.  [Basis: BACT]	Y	
Part 12	Total fugitive POC emissions from all new and modified equipment installed as a result of the Clean Fuels Project, which includes Sources S-1020 through S-1024, S-1026, S-220, S-227, S-1007, S-1011, S-1014 and S-151 shall not exceed 20.8 tons in any rolling 365 consecutive day period. This total may be adjusted by the District in accordance with the provisions of Condition number 9. [Basis: Cumulative Increase]	Y	
Part 42	he S-227 Pentane Storage Tank shall be fixed roof tanks connected to the A-46/A-47 vapor recovery system. NSPS requirements of 40 CFR, Subpart Kb will be applied to this tank. [Basis: Cumulative Increase, Offsets, Toxics]	Y	
Part 43	Tank S-227 shall have a minimum pressure relief valve (PRV) set pressure of 1 psig. [Basis: BAAQMD 8-5]	Y	

# Table IV - J18 Source-Specific Applicable Requirements NSPS Subpart Kb Fixed Roof Tank with Vapor Recovery to Fuel Gas S-227 (TK-1741)

Applicable Requirement	Regulation Title or Description of	Federally Enforceable (Y/N)	Future Effective Date
Part 44	The Permit Holder shall not store any material in S-227 storage tank, other than the materials specified in this application for the tanks, if the new material will result in an emission increase of POC or an increase in toxicity. This prohibition includes (but is not limited to) the storage of a new material with a: a) higher vapor pressure at actual storage temperature; b) lower initial boiling point; c) larger percentage of a toxic component; and d) new toxic compounds. The Permit Holder shall notify the District, in writing, of any proposed product storage changes, as prohibited herein, and received written authorization from the APCO in advance of any such use. [Basis: Cumulative Increase, Offsets, BACT, Toxics]		
Part 45	All POC emissions from tank cleaning, degassing, or product changeout shall be vented to a control device with an overall capture and destruction efficiency of at least 90%, on a mass basis. [Basis: RACT]

40 CFR 63.640(o)(1)	Overlap: Sources subject to NESHAPS (MACT) Subpart CC and NSPS Subpart QQQ are only required to comply with Subpart CC provisions	Y	
40 CFR 63.647(a)	Comply with 61.340-61.355 (Subpart FF). Owners/operators of Group 1 wastewater streams shall comply with sections 61.340 to 61.355 of 40 CFR part 61, subpart FF for each stream that meets the definition of 63.641.	Y	
40 CFR 63.647(c)	Owners/operators required under subpart FF of 40 CFR part 61 to perform periodic measurement of benzene concentration in wastewater, etc., shall operate consistently with the permitted concentration or operating parameter values.	Y	
40 CFR 63.654(a)	Owner/operators subject to the wastewater provisions of 63.647 shall comply with the recordkeeping and reporting requirements in 61.356 and 61.357 of 40 CFR part 61, subpart FF, unless they comply with those specified in paragraph (o)(2)(ii) of 63.640.	Y	

#### Table IV - J36 Source-Specific Applicable Requirements Fixed Roof Tank with Closed Vent System & Two Control Devices - Benzene Wastewater

Applicable Requirement	Regulation Title or Description of	Federally Enforceable (Y/N)	Future Effective Date
BAAQMD Condition # 11888			
Part 1	The emissions of nitrogen oxides (NOx) shall not exceed 25 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 9-102-2-112)	Y	
Part 2	The emissions of carbon monoxide (CO) shall not exceed 50 ppm, byvolume, dry, corrected to 3%. oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)	Y	
Part 3	The VOC destruction efficiency of the A-57 Thermal Oxidizer shall be noless than 98.5%, by weight. (Basis: NSPS and NESHAPS)	Y	
Part 4	The VOC destruction efficiency of the A-57 Thermal Oxidizer shall be noof A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum temperature) as averaged over any consecutive 3-hour period. If source test data demonstrate that an alternate temperature is necessary for maintaining compliance with Part #3, the Owner/Operator shall maintain the oxidation temperature at or above the minimum temperature limit, averaged over any consecutive 3-hour period, as determined by	Y	
Part 5	The A-57 Thermal Oxidizer shall be equipped with a temperature measuring device capable of continuously measuring and recording the outlet temperature in A-57. [Basis: Monitoring]	Y	
Part 6	This device shall be accurate to within 20 degrees Fahrenheit (oF) andshall be maintained in accordance with manufacturer's recommendations. This temperature monitor shall be used to determine compliance with the	Y	
Part 8	BAAQMD approved source test to determine compliance with the NOx, CO, and VOC limitations. All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance Verification)	Y	

#### Table IV - J36 Source-Specific Applicable Requirements Fixed Roof Tank with Closed Vent System & Two Control Devices - Benzene Wastewater

Applicable Requirement	Regulation Title or Description of	Federally Enforceable (Y/N)	Future Effective Date
Part 9	This source shall be abated by two 700 lb (minimum) carbon canisters in series(A-37) and/or the A-57 Thermal Oxidizer at all times when the source is in service except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]	Y	
Part 10	The total combined non-methane hydrocarbons (NMHC) emissions emitted from A-36, A-37 and A-57 shall not exceed 15 pounds per day, as averaged over one month. [Basis: RACT]	Y	
Part 11	NMHC shall be determined from the flow ratesand NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-34 of the District's Manual of Procedures Volume IV. The operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When recommissioning A-37 from standby services, A-37 carbon shall be replaced weekly until the continuous VOC monitoring A-37 outlet is operating. [Basis: Cumulative Increase]	Y	
Part 12	To demonstrate compliance with Condition 10, the following records shall be maintained in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating.  a. Daily NMHC emission rate in pounds per day.  b. Daily NMHC emission rate, as averaged over one month, in pounds per day.  c. Daily flow rate and outlet NMHC concentration. Carbon canister changeout date.  d. Total volume of gas recorded between carbon canister changeout. [Basis: Cumulative Increase]	Y

### Table IV - J38 Source-Specific Applicable Requirements NSPS Subpart Kb Fixed Roof Tank with Closed Vent System & Carbon Control Device

Applicable Requirement	Deculation Title or Decemintion of	Federally Enforceable (Y/N)	Future Effective Date
	Regulation Title or Description of  Overlap: Sources subject to NESHAPS (MACT) Subpart CC and		Date
40 CFR 63.640(o)(1)	NSPS Subpart QQQ are only required to comply with Subpart CC provisions	Y	
40 CFR 63.647(a)	Comply with 61.340-61.355 (Subpart FF). Owners/operators of Group 1 wastewater streams shall comply with sections 61.340 to 61.355 of 40 CFR part 61, subpart FF for each stream that meets the definition of 63.641.	Y	
40 CFR 63.647(c)	Owners/operators required under subpart FF of 40 CFR part 61 to perform periodic measurement of benzene concentration in wastewater, etc., shall operate consistently with the permitted concentration or operating parameter values.	Y	
40 CFR 63.654(a)	Owner/operators subject to the wastewater provisions of 63.647 shall comply with the recordkeeping and reporting requirements in 61.356 and 61.357 of 40 CFR part 61, subpart FF, unless they comply with those specified in paragraph (o)(2)(ii) of 63.640.	Y	
BAAQMD Condition # 11880			
Part1	S-193, S-196, S-205 and S-206: This source shall be abated by two 1200 lb (minimum: carbon canisters (A-36) in series at all times. [Basis: Cumulative Increase]	Y	
Part 2	The combined non-methane hydrocarbons (NMHC) emissions at the outlets of the second carbon canisters of A-36 and A-37 shall not exceed 15 pounds per day, as averaged over one month. [Basis: Regulation 8, Rule 2]	Y	
Part 3	NMHC shall be determined from the flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. [Basis: Cumulative Increase]	Y	

### Table IV - J38 Source-Specific Applicable Requirements NSPS Subpart Kb Fixed Roof Tank with Closed Vent System & Carbon Control Device

Applicable Requirement	Regulation Title or Description of	Federally Enforceable (Y/N)	Future Effective Date
Part 4	To demonstrate compliance with Condition (2), the following records shall be maintained in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made.  a) Daily NMHC emission rate in pounds per day. b) Daily NMHC emission rate, as averaged over one month, in pounds per day. c) Daily flow rate and outlet NMHC concentration. d) Carbon canister changeout date d) Total volume of gas recorded between carbon canister changeout. [Basis: Cumulative Increase]	Y	
Part 5	The operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and any appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]	Y	
Part 7	A monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream shall be used. [Basis: Cumulative Increase]	Y

Table IV - J39
Source-Specific Applicable Requirements
Storage Drums with Closed Vent System & Two Control Devices - Benzene Wastewater
S-199, S-200 (D-2055, D-2056)

		Federally	Future
Applicable		Enforceable	Effective
Requirement	Regulation Title or Description of	(Y/N)	Date
Part 1	S-199 and S-200: The emissions of nitrogen oxides (NOx) shall not	Y	
1 art 1	exceed 25 ppm, by volume, dry, corrected to 3% oxygen, as	1	
	determined by the applicable BAAQMD Source Test Method.		
	(Basis: BAAQMD 2-2-112)		
Part 2	The emissions of carbon monoxide (CO) shall not exceed 50 ppm,	Y	
	by volume, dry, corrected to 3% oxygen, as determined by the		
	applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-		
	112)		
Part 3	The VOC destruction efficiency of the A-57 Thermal Oxidizer shall	Y	
	be no less than 98.5%, by weight. (Basis: NSPS and NESHAPS)		
Part 4	The Owner/Operator shall maintain the oxidation temperature of	Y	
	A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit		
	(minimum temperature) as averaged over any consecutive 3-hour		
	period. If source test data demonstrate that an alternate temperature		
	is necessary for maintaining compliance with Part #3, the		
	Owner/Operator shall maintain the oxidation temperature at or		
	above the minimum temperature limit, averaged over any		
	consecutive 3-hour period, as determined bythe source test. (Basis:		
	Regulation 2-1-403)		
Part 5	The A-57 Thermal oxidizer shall be equipped with a temperature	Y	
	measuring device capable of continuously measuring and recording		
	the outlet temperature in A-57. [Basis: NSPS]		
Part 6	This device shall be accurate to within 20 degrees Fahrenheit (oF)	Y	
	and shall be maintained in accordance with manufacturer's		
	recommendations. This temperature monitor shall be used to		
	determine compliance with the temperature requirement in		
	Condition 4. (Basis: Regulation 1-521)		
Part 8	No later than 30 days after startup, the Owner/Operator shall	Y	
	conduct a BAAQMD approved source test to determine compliance		
	with the NOx, CO, and VOC limitations. All source testing shall be		
	done in accordance with the District's Manual of Procedures. The		
	Owner/Operator shall install all necessary source test ports, subject		
	to the approval of the Manager of Source Test in the BAAQMD		
	Technical Services Division. The source test results for NOx, CO		
	and VOC shall be submitted to the Manager of Source Test no later		
	than 30 days after completeion of the source test. (Basis:		
	Compliance Verification)		

Table IV - J39
Source-Specific Applicable Requirements
Storage Drums with Closed Vent System & Two Control Devices - Benzene Wastewater
S-199, S-200 (D-2055, D-2056)

		Federally	Future
Applicable		Enforceable	Effective
Requirement	Regulation Title or Description of	(Y/N)	Date
Part 9	These sources shall be abated by two 700 lb (minimum) carbon	Y	
	canisters (A-37) in series and/or the A-57 Thermal Oxidizer at all		
	times when the source is in service, except during inspection,		
	maintenance and wastewater sampling. [Basis: Cumulative		
	Increase]		
Part 10	The total combined non-methane hydrocarbons (NMHC) emissions	Y	
	emitted from A-36, A-37 and A-57 shall not exceed 15 pounds per		
	day, as averaged over one month. [Basis: Regulation 8, Rule 2]		
Part 11	NMHC shall be determined from the flow rates and NMHC	Y	
Pait II	concentrations at the outlets of the second carbon canisters of A-36	ĭ	
	and A-37 in accordance with ST-7 of the District's Manual of		
	Procedures Volume IV. The operator shall use District approved		
	monitors. NMHC concentration shall be calculated by subtracting		
	the average known methane content of 2500 parts per million		
	(PPM) from the total hydrocarbon analyzer reading measured at the		
	outlets of the second carbon canisters of A-36 and A-37.		
	Alternatively, the methane contents can also be obtained by actual		
	gas samples. When recommissioning A-37 carbon shall be replaced		
	weekly until the continuous VOC monitor on A-37 outlet is		
	operating. [Basis: Cumulative Increase]		
Part 12	To demonstrate compliance with Condition 10, the following	Y	
	records shall be maintained in a District approved log. These		
	records shall be kept on site and made available for District		
	inspection for a period of at least 24 months from the date on which		
	a record is made. NMHC emissions from A-57 shall be based upon		
	the results of a District approved source test. NMHC emissions		
	from A-37 shall be based on historic data until A-37 continuous		
	VOC monitor is operating. [Basis: Cumulative Increase]		
	a. Daily NMHC emission rate in pounds per day.		
	b. Daily NMHC emission rate, as averaged over one month,		
	in pounds per day.		
	c. Daily flow rate and outlet NMHC concentration.		
	d. Carbon canister changeout date.		
	Total volume of gas recorded between carbon canister changeout.

40 CFR 63.640(c)(3)	Wastewater streams and treatment operations associated with petroleum refining process units meeting the criteria of section 63.640(a)	Y	
40 CFR 63.640(o)(1)	Overlap: Sources subject to NESHAPS (MACT) Subpart CC and NSPS Subpart QQQ are only required to comply with Subpart CC provisions	Y	
40 CFR 63.647(a)	Comply with 61.340-61.355 (Subpart FF). Owners/operators of Group 1 wastewater streams shall comply with sections 61.340 to 61.355 of 40 CFR part 61, subpart FF for each stream that meets the definition of 63.641.	Y	
40 CFR 63.647(c)	Owners/operators required under subpart FF of 40 CFR part 61 to perform periodic measurement of benzene concentration in wastewater, etc., shall operate consistently with the permitted concentration or operating parameter values.	Y	

### Table IV - J40 Source-Specific Applicable Requirements NSPS Subpart Kb Fixed Roof Tank with Closed Vent System & Carbon Control Device

Applicable Requirement	Regulation Title or Description of	Federally Enforceable (Y/N)	Future Effective Date
40 CFR 63.654(a)	Owner/operators subject to the wastewater provisions of 63.647 shall comply with the recordkeeping and reporting requirements in 61.356 and 61.357 of 40 CFR part 61, subpart FF, unless they comply with those specified in paragraph (o)(2)(ii) of 63.640.	Y	
BAAQMD Condition #11880	For S-193, S-196, S-205 and S-206:		
Part 1	This source shall be abated by two 1200 lb (minimum: carbon canisters (A-36) in series at all times. [Basis: Cumulative Increase]	Y	
Part 2	The combined non-methane hydrocarbons (NMHC) emissions at the outlets of the second carbon canisters of A-36 and A-37 shall not exceed 15 pounds per day, as averaged over one month. [Basis: Regulation 8, Rule 2]	Y	
Part 3	NMHC shall be determined from the flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. [Basis: Cumulative Increase]	Y	
Part 4	To demonstrate compliance with Condition (2), the following records shall be maintained in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. [Basis: Cumulative Increase]  a) Daily NMHC emission rate in pounds per day. b) Daily NMHC emission rate, as averaged over one month, in pounds per day. c) Daily flow rate and outlet NMHC concentration. d) Carbon canister changeout date e) Total volume of gas recorded between carbon canister changeout.	Y

	parameter values.		
<u>63.654(a)</u>	Owner/operators subject to the wastewater provisions of 63.647 shall comply with the recordkeeping and reporting requirements in 61.356 and 61.357 of 40 CFR part 61, subpart FF, unless they comply with those specified in paragraph (o)(2)(ii) of 63.640.	<u>Y</u>	
BAAQMD	Permit Conditions for S-150 Sour Wastewater Tank		
Condition #11879			
Part 1	The Owner/Operator shall limit the emissions of nitrogen oxides	Y	
	(NOx) to no more than 25 ppm, by volume, dry, corrected to 3%		
	oxygen, as determined by the applicable BAAQMD Source Test		
	Method. (Basis: BAAQMD 2-2-112)		
Part 2	The Owner/Operator shall limit the emissions of carbon monoxide	Y	
	(CO) to no more than 50 ppm, by volume, dry, corrected to 3%		
	oxygen, as determined by the applicable BAAQMD Source Test		
	Method. (Basis: BAAQMD 2-2-112)		
Part 3	The Owner/Operator shall maintain the VOC destruction efficiency	Y	
	of the A-57 Thermal Oxidizer at or above 98.5%, by weight. (Basis:		
	NSPS and NESHAPS)		
Part 4	The Owner/Operator shall maintain the oxidation temperature of A-	Y	
	57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum		
	temperature) as averaged over any consecutive 3-hour period. If		
	source test data demonstrate that an alternate temperature is		
	necessary for maintaining compliance with Part #3, the		
	Owner/Operator shall maintain the oxidation temperature at or		
	above the minimum temperature limit, averaged over any		
	consecutive 3-hour period, as determined by the source test. (Basis:		
	Regulation 2-1-403)		
Part 5	The Owner/Operator shall equip A-57 Thermal Oxidizer with a	Y	
	temperature measuring device capable of continuously measuring		
	and recording the oxidation temperature in A-57. (Basis:		
	Temperature Monitoring)		

		Federally	Future
Applicable	Regulation Title or	Enforceable	Effective
Requirement	Description of Requirement	(Y/N)	Date
Part 6	This device shall be accurate to within 20 degrees Fahrenheit (oF)	Y	
	and shall be maintained in accordance with manufacturer's		
	recommendations. This temperature monitor shall be used to		
	determine compliance with the temperature requirement in Part 4.		
	(Basis: Regulation 1-521)		
Part 8	No later than 30 days after startup, the Owner/Operator shall	Y	
	conduct a BAAQMD approved source test to determine compliance		
	with the NOx, CO, and VOC limitations. All source testing shall be		
	done in accordance with the District's Manual of Procedures. The		
	Owner/Operator shall install all necessary source test ports, subject		
	to the approval of the Manager of Source Test in the BAAQMD		
	Technical Services Division. The source test results for NOx, CO		
	and VOC shall be submitted to the Manager of Source Test no later		
	than 30 days after completion of the source test. (Basis:		
	Compliance Verification)		
Part 10	The Owner/Operator shall limit the total combined non-methane	Y	
	hydrocarbons (NMHC) emissions emitted from A-36, A-37 and A-		
	57 to no more than 15 pounds per day, as averaged over one month.		
	[Basis: Regulation 8, Rule 2]		
Part 12	To demonstrate compliance with Part 10, the Owner/Operator shall	Y	
	maintain the following records in a District approved log. These		
	records shall be kept on site and made available for District		
	inspection for a period of at least 60 months from the date on which		
	a record is made. NMHC emissions from A-57 shall be based upon		
	the results of a District approved source test. NMHC emissions from		
	A-37 shall be based on historic data until A-37 continuous VOC		
	monitor is operating. [Basis: Cumulative Increase]		
	a. Daily NMHC emission rate in pounds per day.		
	b. Daily NMHC emission rate, as averaged over one month, in		
	pounds per day.		
	c. Daily flow rate and outlet NMHC concentration.		
	d. Carbon canister changeout date.		
	e. Total volume of gas recorded between carbon canister		
	changeout.		

Applicable Requirement	Regulation Title or Description of Requirement	Federally Enforceable (Y/N)	Future Effective Date

#### **VI. Permit Conditions**

**Condition** 98

**For** S-129 Marine Bulk Plant (LD-129)

- 1. The Owner/Operator shall provide the District with access to all crude lightering operations conducted in the San Francisco Bay and to be delivered to the Benicia Refinery for which Owner/Operator, Sea River shipping, or any other affiliated company is responsible. Access to lightering operations shall be provided via the regularly scheduled Water-taxi service. [Basis: Banked POC credits]
- 2. The Owner/Operator shall provide a listing and voyage history for all ships delivering crude to the Benicia Refinery, calculate emissions using the emission factors and part #6, provide pressure charts required in part #8, and submit a report on a quarterly basis to the district. [Basis: Reporting, Compliance Verification]
- 3. On a quarterly basis, the Owner/Operator shall provide the district with copies of all U.S. Army corporation of engineers form 3925 for all material transferred by or for the Owner/Operator in the San Francisco Bay for delivery to the Benicia Refinery. [Basis: Reporting]
- 4. On a quarterly basis, the Owner/Operator shall provide verification of each controlled transfer. [Basis: Reporting]
- 5. The Owner/Operator shall limit all lightering emissions of crude delivered to the Benicia Refinery to 48 tons per year. [Basis: Banked POC Credits]
- 6. The Owner/Operator shall use the following emission factors:

Controlled, lb/1000 gal

Ships- 0.04

Barges-0.05

Uncontrolled, lb/103gal

**Ships-0.80** 

Barges-1.0.

[Basis: Banked POC Credits]

- 7. The Owner/Operator shall limit the highest pressure developed during the lightering to no more than 80% of the lowest relief valve set pressure of either vessel involved in the transfer. Pressure
  - excursions not exceeding 15 minutes cumulative duration during a lightering transfer and not causing lifting of any pressure relief device shall be allowed. [Basis: VOC Minimization]
- 8. The Owner/Operator shall continuously record the pressure developed in the vessel tanks during lightering while the vessel is in District waters. [Basis: Banked POC credits]
- 9. The Owner/Operator shall test the tanks of all vessels involved in a lightering operation using the controlled emission factors to verify that there is no leakage at 80% of the lowest relief valve set pressure at least once every three years. This test shall be done at the completion of refurbishing ("Dry Dock") and shall test the entire system, manifold, pressure relief valves, hatch covers, etc. an OVA, bubble test, or other equivalent procedure approved by the APCO may be used. [Basis: VOC]

#### **VI. Permit Conditions**

- 10. During controlled lightering operations, the Owner/Operator shall isolate both vessels' inert gas systems from the vapor space of the cargo tanks. If inert gas is generated during the transfer of cargos, the emissions for that transfer shall be calculated using the uncontrolled emissions factors. If Owner/Operator can demonstrate that emissions were partially controlled, to the satisfaction of the APCO, emissions less than uncontrolled may be allowed. [Basis: Cumulative Increase]
- 11. A fugitive emissions maintenance program will be implemented on each lighter vessel used by the Owner/Operator. A complete survey of all above-deck equipment will be performed by Owner/Operator once per quarter. [Basis: Cumulative Increase]
- Using an OVA, bubble test, or other procedure approved by the APCO, the Owner/Operator shall conduct a survey of all in-service pressure relief valves on both vessels prior to completion of 20% of the cargo transfer and repeated at least once after transferring 60% of the cargo. A leak shall be defined as a reading in excess of 500 ppmv, as methane. All readings in excess of 500 ppmv, as methane, shall be noted by source and maximum concentration. If any leak cannot be repaired, or valve removed from service, within 15 minutes of detection, the uncontrolled emission factors of part #6 shall be used to calculate emissions for the entire lightering event. If Owner/Operator can demonstrate that emissions were partially controlled to the satisfaction of the APCO, emissions less than uncontrolled may be used. All survey results shall be summarized in the report required by part #2.[Basis: RACT]
- 13. For vessels involved in controlled lightering events, the Owner/Operator shall not perform any operations that result in venting crude oil cargo vapors in District waters. These operations include as examples: open cargo inspections, open gauging, gas freeing of tanks for maintenance or inspection, or venting of ballast loading emissions. When any such venting operation is required, the circumstances of the incident will be logged, along with pertinent information such as tank volume, contents, and pressure before and after venting. The uncontrolled emission factors of part #6 shall be used to calculate emissions for the entire loading operation. If Owner/Operator can demonstrate that emissions were partially controlled to the satisfaction of the APCO, emissions less than uncontrolled may be used. These emissions will be added to the emissions calculations and reported under part #2. [Basis: Cumulative Increase]

#### Condition# 125

For Source S-1 Claus (F-1301A, Natural Gas)

- 1. The Owner/Operator shall provide reasonable access to 24 hour sulfur production data whenever the APCO or his/her designated representative performs compliance determination on the Sulfur Recovery Unit (SRU), Tail Gas Clean-up Unit and main stack. [Basis: Banked POC credits]
- 2. The Owner/Operator shall operate and maintain the best available H2S monitoring system on the Tail Gas Clean-up Unit exhaust stack. [Basis: 9-1-313.2, odors]

3. Except during upset conditions, the Owner/Operator shall not open the motor operated valve (MOV-001), which allows Tail Gas from S-1 to flow to the incinerator (F-1302A; A-14), when either of the sour gas feed valves (F002, F004) to source (S-1) are open. A closed block valve or blind in the pertinent lines shall be considered sufficient to fulfill this requirement. [Basis: Regulation 9-1-313.2, odors]

4. Except during upset conditions, the Owner/Operator shall route and clean the tail gases from the S-1 Sulfur Recovery Unit to the Beavon and Flexsorb SE Tail Gas Treatment Units (A-24, A-64 and A-56). The Owner/Operator shall return the recovered hydrogen sulfide to the S-1 and/or S-2 SRU for recovery as elemental sulfur. [Basis: Regulation 9-1-313.2, odors]

#### Condition# 126

For Source S-2 Claus (F-1301B, Natural Gas]

- 1. The Owner/Operator shall provide reasonable access to 24 hour sulfur production data whenever the APCO or his/her designated representative performs compliance determinations on the Sulfur Recovery Unit (SRU), Tail Gas Clean-up Unit and main stack. [Basis: BAAQMD 9-1-313.2]
- 2. The Owner/Operator shall operate and maintain the best available H2S monitoring system on the Tail Gas Clean-up Unit exhaust stack. [Basis: 9-1-313.2, odors]
- 3. Except during upset conditions, the Owner/Operator shall not open the motor operated valve (MOV-003), that allows Tail Gas from S-2 to flow to the incinerator (F-1302B; A-15) when either of the sour gas feed valves (F052, F054) to source S-2 are open. A closed block valve or blind in the pertinent lines shall be considered sufficient to fulfill this requirement. [Basis: Regulation 9-1-313.2]
- 4. Except during upset conditions, the Owner/Operator shall route and clean the tail gases from the S-2 Sulfur Recovery Unit to the Beavon and Flexsorb SE Tail Gas Treatment Units (A-24, A-64 and A-56). The Owner/Operator shall return the recovered hydrogen sulfide the S-1 and/or S-2 SRU for recovery as elemental sulfur. [Basis: Regulation 9-1-313.2]

#### **Condition** 254

**For** S-173 Process Furnace (F-902)

- 1. The Owner/Operator shall maintain the NOx emissions from S-173 at or below 40 ppm "dry" at 3% oxygen. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall operate the Furnace F-1060 for no more than 30 days per year. [Basis: Cumulative Increase]
- 3. The Owner/Operator shall conduct a District approved Source Test within 30 days after start-up and every six months thereafter to determine compliance with part #1. [Basis: Cumulative Increase]
- 4. Any "banking" application submitted by the Owner/Operator relative to this permit shall, at a minimum, include an analysis of the entire coker, specifically emissions associated with "running normal rates for longer periods." [Basis: Cumulative Increase]

#### **VI. Permit Conditions**

Condition# 639

For Source S-175

1. The Owner/Operator shall abate the visible emissions from the lime slurry tanks. [Basis: BAAQMD Regulation 1-301]

#### Condition# 815

For Source S-1006

- 1. The Crude Unit throughput shall not exceed 135,000 barrels per day (any single day) of crude feed. [Basis: Cumulative Increase, toxics, offsets]
- 2. The Owner/Operator shall maintain a log of daily crude unit throughput. This data shall be available to the District upon request. A report shall be submitted to the District on a monthly basis. [Basis: Banked POC credits]

#### Condition# 896

### S-170 Fixed Roof Tank (F-401 and TK-2317)

- 1. Moved S-23 condition to Condition #14138 which also has conditions for S-23.2.

   The Owner/Operator shall limit emissions of NMHC from S-170 (5000 gallon polymer storage tank) to no more than 1 lb/day averaged over any 30-day period.

  [Basis: Cumulative Increase]
- 3. Owner/Operator shall maintain records of all tank S-170 loadings including date, type and amount of material loaded. The Owner/Operator shall maintain these records for at least five years and be available to the District upon request. [Basis: Cumulative increase]

#### Condition# 1709

For Source S-129 Marine Bulk Plant (LD-129)

- 1. The Owner/Operator shall limit the total non-methane hydrocarbon emissions due to gasoline (mogas) loading across the marine dock to 43.4 tons/yr excluding shore-side fugitive emissions. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall calculate the organic emissions as the sum of the volume of gasoline loaded on each vessel multiplied by the appropriate emission factor listed below. [Basis: Cumulative Increase]

	UNCONTROLLED	CONTROLLED
EMISSION FACTOR	LB VOC/1000 GAL	LB VOC/1000 GAL
Ship	1.80	0.22
Barge	3.40	0.30

- 3. The Owner/Operator shall design the John Zink abatement system, A-29, for at least 95%, by weight, abatement efficiency or the VOC emissions shall not exceed 2 lb/1,000 bbl loaded (non-methane). [Basis: Cumulative Increase]
- 4. The Owner/Operator shall maintain a log of each mogas loading across the dock, listing the date, vessel loaded, relief valve set pressure, maximum pressure developed, loading interval (time), and amount and type of material loaded. [Basis: Cumulative Increase]

#### **VI. Permit Conditions**

5. The Owner/Operator shall install a continuous emission monitor and recorder for mass VOC emissions at A-29 discharge emission point, unless Owner/Operator can demonstrate to the satisfaction of the APCO that a concentration measurement alone will provide assurance of compliance with part 3. [Basis: Cumulative Increase

- 6. The Owner/Operator shall maintain a continuous pressure recording of all controlled gasoline (mogas) loading. [Basis: Cumulative Increase]
- 7. The Owner/Operator shall submit a quarterly report of daily loadings and emissions on a District approved format. [Basis: Cumulative Increase
- 8. Any vessel loading that develops a pressure exceeding 80% of the lowest relief valve set pressure shall be considered uncontrolled. The Owner/Operator shall use the uncontrolled emission factor in part 2 to determine the emissions from such loading operations. If the Owner/Operator can demonstrate that the emissions were partially controlled to the satisfaction of the APCO, emissions less than uncontrolled will be considered. [Basis: Cumulative Increase]
- 9. The Owner/Operator shall test for gas leakage at all vessels used in controlled loading more than twice per year. This testing shall be conducted both prior and after refurbishing. The time between testing shall not exceed 36 months. Each test shall include the leakage rate in barrels per hour at 80% of the lowest relief valve set pressure and the set pressure for each relief valve. This test shall determine the leakage from the entire system, tanks, relief valves, vapor collection, hatch covers, etc. [Basis: Cumulative Increase]
- 10. If the testing in part 9 demonstrates a leakage rate greater than 5% of the total volume, the Owner/Operator shall calculate the emissions for any leak exceeding 5% of the total volume using worst case assumptions, highest vapor pressure and saturated vapor space. The Owner/Operator shall then add the calculated emissions to the total used to determine compliance with part 1. These added emissions shall be assumed to have occurred since the last leakage test. [Basis: Cumulative Increase]
- 11. If the calculations required by part 10 result in exceeding part 1, the Owner/Operator shall reduce their emissions across the marine dock by 110% of the excess for the next calendar year. [Basis: Cumulative Increase]
- 12. The Owner/Operator shall conduct a leak test on all vessel relief valves, hatch covers, gauging connections and any other potential leaking points for every vessel used in vapor-controlled loading more than twice per year. Testing shall be done on an average of every ten loads for each vessel. Testing shall be done during loading operations. If any emission point that reads greater than 10,000 ppm (as methane) as determined by a portable hydrocarbon analyzer (OVA), that load shall be considered uncontrolled. All subsequent loads by that vessel shall also be considered uncontrolled until a leak test result lower than 10,000 ppm is achieved. Leak test results shall be submitted to the BAAQMD with each quarterly report. Concentrations shall be read 1 centimeter downstream of any discharge point. If Owner/Operator can demonstrate that the emissions were partially controlled to the satisfaction of the APCO, emissions less than uncontrolled will be considered. [Basis: RACT, Cumulative Increase]
- 13. Deleted. [Basis: Source test completed.] 14. Deleted. [Basis: The District

#### VI. Permit Conditions

- approved source testing facility prior to permit issuance.]15. Deleted. [Basis: The Owner/Operator installed and operated the equipment prior to banking of any emission reduction credits.]
- 16. The Owner/Operator shall provide access and an opportunity for the APCO to verify operation of all controlled loadings. [Basis: Cumulative Increase]

#### Condition# 3253

For Source S-176 Material Handling, Salt Tank (TK-2325)

1. If dry salt is added to tank No. 2325 (S-176), the Owner/Operator shall install a particulate control device to control any emissions from this source. [Basis: Cumulative Increase]

#### Condition# 4882

For Sources S-188 Oil/Water Separator and S-189 Oil/Water Separator

- 1. The Owner/Operator shall vent the emissions from the Oil/Water/Sediment Separator (S-188) and the Induced Static Flotation Cell (S-189) to the existing flare (S-18) at all times. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall operate S-188 and S-189 within the the designed capacities (700 gallons per minute or less). [Basis: Cumulative Increase]

#### Condition# 7015

For Sources S-214 (BIOX Aerator) and S-215 (BIOX Clarifier)

1. The Owner/Operator shall operate the S-214 (BIOX Aerator) and S-215 (BIOX Clarifier) in a manner that does not produce odors in such quantities as to cause a public nuisance under Regulation 1-301. [Basis: BAAQMD 1-301]

Condition# 7559

For Source S-133 (Spent Acid Tank)

1. The Owner/Operator shall route the VOC emissions emitted from the spent acid tank (S-133) to the flare gas recovery header (S-9). [Basis: Cumulative Increase]

#### **Condition** 8348

**For** S-1007 Alkylation Unit Permit condition 8348, Parts 1 through 4 superseded by Condition 10574.

- 1. Deleted.
- 2. Deleted.

#### **VI. Permit Conditions**

- 3. Deleted.
- 4. Deleted.

#### Condition# 8564

For Source S-57 Floating Roof Tank

- 1. The Owner/Operator shall not heat Tank 1701 (S-57) when storing "light" crude oil. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall limt the vapor pressure of material stored in TK1701 to no more than 3.5 psi. [Basis: Cumulative Increase]
- 3. The following fugitive equipment, installed under Application #9817 to comply with 40 CFR 61, Subpart FF (Benzene Waste NESHAPS), shall be monitored, maintained, and repaired by the Owner/Operator in accordance with the NESHAPS [Basis: Cumulative Increase; Offsets]

97 valves294 flanges3 pumps

1. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.] 2. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]3. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]4. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]

#### Condition# 8771

For Source S-208 Coker Feed Drum D-920

- 1. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]
- 2. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]]
- 3. The Owner/Operator shall abate the coker feed drum (S-208) by the flare gas recovery system including the flares (S-18 & S-19) at all times. [Basis: Cumulative Increase]
- 4. The Owner/Operator shall limit the material throughput at S-208 to no more than 29 million gallons during any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- 5. To demonstrate compliance with Part #4, the Owner/Operator shall record the monthly material throughput at S-208 in a District approved log. The Owner/Operator shall keep these records on site and make them available for District inspection for a period of at least 5 years from the date on which a record is made. [Basis: Cumulative Increase]

#### **VI. Permit Conditions**

Condition# 9296

For Sources S-40 Steam Boiler, S-158 Fixed Roof Tank, S-209 Methanol/Ethanol Railcar Unloading Facility, S-210 Floating Roof Tank, and S-211 Alkylate Bebutanizer (at **former** MTBE Unit) and S-1024 Light Cat Naphtha Hydrofiner

- A1. Deleted. [Basis: Superceeded by BAAQMD Condition 18043]
- A2. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]
- A3. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]
- A4. The MTBE unit shall be completely shutdown except for the MTBE tower used to remove butane from the Alkylate as part of the MTBE Phaseout Project. <Basis: Banking Credits>

#### S-209 Methanol/Ethanol Unloading Station

- B1. The Owner/Operator shall only permit the transport trucks to travel on paved roads at all times inside of the facility. [Basis: Cumulative Increase]
- B2. All deliveries of methanol/ethanol shall be from the transport trucks unless the Owner/Operator first receive prior written approval from the APCO to use other delivery modes. [Basis: Cumulative Increase]
- B3. Deleted. [Basis: The Owner/Operator paved the unpaved road prior to the operation of the MTBE facility.]
- B4. The Owner/Operator shall limt the total number of truck deliveries of methanol/ethanol at the facility to no more than 2920 trucks in any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- B5. The Owner/Operator shall deliver the dispensed methanol/ethanol from the transport trucks to the S-210 methanol/ethanol tank or any tank with equivalent controls subject to advance written approval by the APCO. [Basis: Cumulative Increase]
- B6. The Owner/Operator shall limit the total fugitive POC emissions from S-209 to no more than 0.41 ton in any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- B7. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]
- B8. Deleted. [Basis: Maximum leak concentrations are covered by Regulation 8, Rule 18.]
- B9. The Owner/Operator shall record the total number of truck deliveries of methanol/ethanol weekly in a District approved log and totalized monthly. The Owner/Operator shall retain these records for a period of at least 5 years from date of entry. The log shall be kept on site and made available to District staff upon request. [Basis: Banked POC credits]

#### S-210 Methanol/ethanol Tank

- C1. The Owner/Operator limit the total throughput of product from S-210 to no more than 575,000 barrels of methanol/ethanol in any rolling 12 consecutive month period. [Basis: Cumulative Increase, BACT, Offsets]
- C2. The Owner/Operator shall limit thetotal POC emissions from S-210 Storage Tank, including associated fugitive POC emissions, to no more than 0.87 ton in any rolling 12 consecutive month period. [Basis: Cumulative Increase, BACT, Offsets]
- C3. Deleted. [Basis: Inspection and Maintenance program is covered by Regulation 8, Rule 18.]
- C4. Deleted. [Basis: Maximum leak concentration is covered by Regulation 8, Rule 18.]
- C5. The Owner/Operator shall only store methanol/ethanol in the S-210 internal floating roof tank unless written authorization is received from the APCO allowing the use of another product in advance of any use of such product. [Basis: Cumulative Increase, Offsets, Toxics]
- C6. The Owner/Operator shall record the total monthly throughput of methanol/ethanol withdrawn from the S-210 Storage Tank in a District approved log. This record shall be retained for a period of at least 5 years from date of entry. The log shall be kept on site and made available to District staff upon request. [Basis: Cumulative Increase]

#### S-40 Steam Boiler

- D1. The Owner/Operator shall equip the steam boiler (S-40) with Low NOx burners and flue gas recirculation. [Basis: BAAQMD Regulation 9-10, Offsets, Cumulative Increase]
- D2. The Owner/Operator shall limit the NOx concentration from S-40 to no more than 30 ppmv, dry, corrected to 3 % oxygen, as averaged over any consecutive 12 month period. (Basis: Offsets)
- D3. TheOwner/Operator shall limit the CO concentration to no more than 400 ppmv, dry, corrected to 3 % oxygen. [Basis: BAAQMD Regulation 9-10, Cumulative Increase]
- D4. The Owner/Operator shall operate the scrubber system upstream of S-40 Boiler at an annualized daily averaged (calendar year) total reduced sulfur concentration at or below 51 ppm, by volume. [Basis: Offsets]
- D5. Completed
- D6. The Owner/Operator shall maintain daily records, in a District approved log, of the total reduced sulfur concentration required in part 4. These records shall be retained for a period of at least 5 years from date of entry. The logs shall be kept on site and made available to District staff upon request. [Basis: Banked POC credits]
- D7. The Owner/Operator shall operate the the S-40 Utility package Boiler at a firing rate at or below 218 million Btu per hour. (Basis: Cumulative Increase, Toxics)
- D8. Deleted. Basis: This part was not part of the NSR Authority to construct and was inadvertently left in this section. Furthermore, it is covered by BAAQMD Regulation 9-10-502.1.

#### **VI. Permit Conditions**

D9. Deleted. Basis: This part was not part of the NSR Authority to construct and was inadvertently left in this section. Furthermore, it is covered by BAAQMD Regulation 9-10-502.2.

D10. Deleted. Basis: This part was not part of the NSR Authority to construct and was inadvertently left in this section. Furthermore, it is covered by BAAQMD Regulation 9-10-504.

D11. Deleted. [Basis: Recordkeeping is covered by BAAQMD Regulation 9-10-504.]

S-1024 Light Cat Naphtha Hydrofiner

- E1. The total throughput of product at this source shall not exceed 24,000 barrels per day, as average over any calendar year. [Basis: Cumulative Increase, Toxics]
- E2. The total daily throughput of product at this source shall be recorded daily in a District approved log. This record shall be retained for a period of at least five years from the date of entry. It shall be kept on site and made available to the District staff upon request. [Basis: Recordkeeping]

Condition# 9584

For Source S-158 Fixed Roof Storage Tank

- 1. The Owner/Operator shall limit the throughput at the storage tank S-158 to no more than 10,000 gallons of perchloroethylene during any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- 2. To demonstrate compliance with Part #1, the Owner/Operator shall maintain monthly throughput records of perchloroethylene at S-158 in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 5 years from the date on which a record is made. [Basis: Cumulative Increase]

Condition# 9897

For Source S-11 Activated Carbon Bin TK-2061

- 1. The Owner/Operator shall limit the receipt of the activated carbon at the Activated Carbon Bin Tk-2061 (S-11) to no more than 292 tons during any rolling 12 consecutive month period.[Basis: Cumulative Increase]
- 2. To demonstrate compliance with Part #1, the Owner/Operator shall record the monthly receipt of the activated carbon, totaled on a yearly basis, at S-11 in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least five years from the date on which a record is made. [Basis: Cumulative Increase]

#### VI. Permit Conditions

Condition# 10574 For Sources S-21, S-22, S-220, S-227, S-1020, S-1021, S-1022, S-1023, S-1024, and S-1026

CLEAN FUELS PROJECT APPLICATION 10392 APPLICATION 3782 Alkylation Production Project

#### PERMIT CONDITIONS

S-220 Hot Oil System S-21 Hydrogen Reformer Furnace, F-301 S-22 Hydrogen Reformer Furnace, F-351 Refinery Fuel Gas System

Source Test/Continuous Emission Monitors

For any source test or continuous emission monitor/recorder (CEM) required by any permit condition associated with the Clean Fuels Project (CFP), the following shall apply:

- A. Completed
- B. Completed
- C. Completed
- D. Completed
- E. Completed
- F. The Owner/Operator shall install, maintain, calibrate and operate each CEM in accordance with all applicable District regulations. For Part number 15, the Owner/Operator shall include a data logging device that averages the CEM concentration readings for the Refinery fuel gas over the 24-hour time period (calendar day). [Basis: BACT]

Recordkeeping and Monthly Reporting

G. The Owner/Operator shall keep records of all necessary information to demonstrate compliance with all permit conditions associated with the Clean Fuels Project. The Owner/Operator shall retain all records for at least five years from the date of entry, and shall be made available to the District upon request. This includes, but is not limited to, records of the following: [Basis: BACT]

#### VI. Permit Conditions

Fuel usage type and amount for:

S-220 Hot Oil System

S-21 Hydrogen Reformer Furnace

S-22 Hydrogen Reformer Furnace

CEM data and CEM indicated excesses;

Fuel gas H2S concentration (24-hour Average);

Fuel gas total reduced sulfur Concentration (24-hour Average)

Fuel gas usage rates (cubic feet/day)

Fuel heat content, HHV [24-hour average]

Actual Firing Rate (Btu/month)

Miscellaneous

- H. The Owner/Operator shall vent any process vessel depressurization gas to a control device with an overall capture and destruction efficiency of 95%, on a mass basis. [Basis: Cumulative Increase]
- I. Deleted. [Basis: Recordkeeping is covered by BAAQMD Regulation 9-10-504.]

S-1014 Virgin Light Ends Unit

S-151 Waste Water Treatment Unit

S-1003 Hydrocracking Unit

- 1. The Owner/Operator shall equip any new pump installed in light liquid hydrocarbon service as part of the Clean Fuels Project (CFP) with any sealless pump technology approved by the APCO or one of the following approved BACT technologies: [Basis: Cumulative Increase, Offsets, Toxics]
  - a) equipped with dual mechanical seals, having a heavy liquid barrier fluid. The barrier fluid reservoir shall be vented to a control device having at least 95% control efficiency,

or the barrier fluid shall be operated at a pressure higher than the process stream pressure.

- b) equipped with a "canned" pump
- c) equipped with a magnetically driven pump
- 2. Deleted.
- 3. Deleted.
- 4. The Owner/Operator shall equip all hydrocarbon flow control valves installed as part of the Clean Fuels Project with live loaded packing systems and polished stems, or equivalent. [Basis: BACT]
- 5. Except as required by Part number 4, the Owner/Operator shall equip all other hydrocarbon valves greater than 2 inches installed as part of the CFP withone of the following types: (1) bellows sealed, (2) live loaded, (3) graphitic-packed, (4) teflon packed valves or (5) equivalent. [Basis: BACT]
- 6. Deleted. [Basis: Inspection frequency of valves covered by Regulation 8, Rule 18.]
- 7. The Owner/Operator shall equip all flanges installed in the piping systems as a result of the CFP with graphitic-based gaskets, except in services that are not compatible with graphitic material. Asbestos type gaskets shall be used in service where graphitic-based gaskets are not compatible. Deleted rest of condition. [Deletion Basis: Leak repair requirements are covered under Regulation 8, Rule 18.] [Basis: BACT, Offsets, Cumulative Increase, Toxics]
- 8. The Owner/Operator shall equip all new hydrocarbon centrifugal compressors installed as part of the CFP with "wet" dual mechanical seals with a heavy liquid barrier fluid, or dual dry gas mechanical seals buffered with inert gas. The Owner/Operator shall vent all reciprocating compressors installed in hydrocarbon service as part of the CFP to a control device having at least a 95% control efficiency. Any new compressor in hydrocarbon service with less than 50% hydrogen must comply with the applicable standards of NSPS 40 CFR 60, Subpart GGG. [Basis: BACT, Offsets, Cumulative Increase, Toxics, NSPS]
- 9. Completed
- 10. The Owner/Operator shall equip the pressure relief valves, installed as part of the CFP, in gaseous POC and light liquid service to the gas recovery system, or an equivalent control device approved by the District (equivalent does not include rupture disk and/or soft-seat, if vented to atmosphere). This condition does not apply to pressure relief valves on storage tanks or pressure relief valves that handle only low vapor pressure organic liquids (< 0.5 psia). [Basis: BACT]
- 11. The Owner/Operator shall fit all process drains installed as part of the CFP with a "P" trap sealing system which inhibit POC emissions from the process wastewater system from escaping through the drain. [Basis: BACT]
- 12. TheOwner/Operator shall limit the total fugitive POC emissions from all new and modified equipment installed as a result of the Clean Fuels Project, which includes Sources S-1020 through S-1024, S-1026, S-220, S-227, S-1007, S-1011, S-1014 and S-151 to no more than 20.8 tons in any rolling 365 consecutive day period. This total may be adjusted by the District in accordance with the provisions of Part # 9. [Basis:

Cumulative Increase]

#### **FUEL GAS SYSTEM**

- 13. The Owner/Operator shall limit the refinery fuel gas combusted in any CFP equipment to no more than any of the following: (a) 100 ppmv H2S, averaged over a 24-hour calendar day and (b) 160 ppm H2S, averaged over any 3-hour period. [Basis: Cumulative Increase, BACT, NSPS]
- 14. The Owner/Operator shall limit the refinery fuel gas combusted in any CFP equipment to no more than 51 ppmv of total reduced sulfur, averaged over any consecutive four quarter period. [Basis: Contemporaneous offsets provided in Application #18888 for S-237 Boiler, BACT]
- 15. The Owner/Operator shall install and operate a District approved continuous gaseous fuel monitor/recorder to determine the H2S content and total reduced sulfur content of the refinery fuel gas prior to combustion in the CFP combustion sources (S-21, S-22 and S-220) [Basis: Monitoring and Records].
  - 16. The Owner/Operator shall calculate and record the 24-hour average H2S content and total reduced sulfur content of the refinery fuel gas, for determining compliance with Parts No. 13 and 14, based on the previous 24 individual hourly averages. On a quarterly basis, the Owner/Operator shall report for the following S-220, S-21 and S-22:
    - (a) the daily fuel consumption,
    - (b) daily averaged H2S content of the refinery fuel gas
    - (c) daily averaged total reduced sulfur content
    - (d) quarterly daily averaged H2S content
    - (e) quarterly daily averaged total reduced sulfur content
    - (f) annual averaged total reduced sulfur content using the last four quarters. [Basis: Contemporaneous offsets provided in Application #18888 for S-237 Boiler, BACT]

#### COMBUSTION SOURCES

#### General Combustion

The following are general requirements for all new or modified combustion sources associated with the Clean Fuels Project:

- 17. The Owner/Operator shall only fire in all new and modified combustion sources (S-21, S-22 and S-220), as part of the CFP, natural gas, LPG/pentane gases or refinery fuel gas. In no case shall any combustion source burn a fuel with a H2S concentration exceeding 100 ppmv, averaged over 24 hours (calendar day). [Basis: BACT, Cumulative Increase]
- 18. The Owner/Operator shall limit the total combined emissions from these new and modified combustion sources (S-21, S-22 and S-220), installed as a part of the CFP to no more than the following annual limits: <Basis: BACT, Cumulative Increase,

#### **VI. Permit Conditions**

Offsets> <Basis: SO2 Contemporaneous offset credits for SO2 and PM10 in Application #18888>

Pollutant	S-21, S-22 and S-220 Annual (tons)
NOx(1)	17.11 (S-220 only)
CO	134.904
SO2	59.358
PM10	26.981
POC	15.514

Note 1. NOx emission increases from new S-220 Hot Oil System only. The two modified combustion sources (S-21 and S-22) will not increase NOx emissions from the baseline total of 195.3 and 191.8 tons per year, respectively Deleted. [Basis: There is no NOx increase in emissions from the S-21 and S-22 Hydrogen Heaters.]

- 19. The Owner/Operator shall equip the three furnaces (S-21, S-22 and S-220) with a District approved continuous fuel flow monitor and recorder in order to determine fuel consumption. [Basis: Monitoring and records]
- 20. The Owner/Operator shall calculate and totalize NOx, CO, POC, SO2 and PM10 emissions from all new and modified combustion sources (S-21, S-22 and S-220) in the Clean Fuels Project on a calendar year basis to demonstrate compliance with Condition number 18. The emission factors or procedure to be used for this purpose shall be:

NOx: Summation of daily emissions in Alternative Compliance Plan for Regulation 9-10 compliance

CO: 0.0200 lb/MMBtu POC: 0.0023 lb/MMBtu SO2: 0.0069 lb/MMBtu PM10: 0.0040 lb/MMBtu

The Owner/Operator shall retain the results on site for a period of at least five years and make them available to District staff upon request.

[Basis: BACT, Cumulative Increase]

21. Except for no more than 3 minutes in any hour, the Owner/Operator shall limit the

- visible emissions from the three combustion sources (S-21, S-22 and S-220) or the three abatement devices (A-43, A-44 and A-45) installed as part of the CFP to no more than Ringelmann No. 1.0 or 20% opacity. [Basis: BAAQMD 6-301]
- 22. For purposes of permitting S-220, S-21 and S-22, a maximum limit of 24 consecutive hours has been set for startup and shutdown. The 24-consecutive-hour startup period may be extended to include furnace dryout/warmup periods (mechanical and process) that are limited to not exceed an additional 72 consecutive hours. The 24 hour period does not apply during the initial startup of the Units. [Basis: Cumulative Increase]

#### S-220 Hot Oil System

- Except during startup and shutdown, the Owner/Operator shall limit emissions of nitrogen oxides from the S-220 Hot Oil System to no more than 10 ppmv, dry, corrected to 3% oxygen, (0.0118 lb/MMBtu) averaged over any 3 consecutive hours. [Basis: BACT, Offsets, Cumulative Increase]
- 24. For the S-220 Hot Oil System, the Owner/Operator shall limit the CO emissions to no more than 28 ppmv, dry, corrected to 3% oxygen, (0.02 lb/MM Btu) averaged over 8 hours, except during periods of startup and shutdown. [Basis: BACT, Offsets, Cumulative Increase]
- 25. The Owner/Operator shall abate S-220 at all times by A-45 Selective Catalytic Reduction System when it is in operation. Operation of the A-45 Selective Catalytic System shall be in accordance with manufacturer's recommended procedures during periods of operation. [Basis: BACT, Offsets, Cumulative Increase]
- Except during periods of startup and shutdown, the Owner/Operator shall limit ammonia emissions (ammonia slip) from the SCR unit (A-45) to no more than 10 ppmv of ammonia, dry, corrected to 3% oxygen, averaged over any consecutive 3 hour period. [Basis: BACT, Offsets, Cumulative Increase]
- 27. For source S-220, the Owner/Operator shall install, calibrate, maintain, and operate a District-approved continuous emission monitor and recorder for NOx and O2. [Basis: Monitoring]
- 28. Completed
- 29. The Owner/Operator shall limit the total combined heat input for S-220 to no more than 28.908 million therms (2.89 trillion Btus) in any 365 consecutive day period. [Basis: BACT, Offsets, Cumulative Increase]
- 30. The Owner/Operator shall limit the firing rate of the S-220 MRU Hot Oil Furnace to no more than 351 million Btu per hour (Maximum firing rate). (Basis: Cumulative Increase, Toxics)
  - S-21 Hydrogen Reformer Furnace, F-301 S-22 Hydrogen Reformer Furnace, F-351
- 31. For the S-21 and S-22 furnaces, the Owner/Operator shall limit the emissions of nitrogen oxides based on CEM data to no more than 60 ppmv, dry, corrected to 3% oxygen, (0.0708 lb/MMBtu) averaged over any consecutive 24 hour period, except

during periods of startup and shutdown. For the S-21 and S-22 furnaces when monitored without a CEM, the Owner/Operator shall limit the emissions of nitrogen oxides to no more than 60 ppmv, dry, corrected to 3% oxygen determined in accordance with the test method outlined in the District Source Test Method 13A or 13B. [Basis: Cumulative Increase, Offsets]

- 32. For the S-21 and S-22 furnaces, the Owner/Operator shall limit emissions of CO to no more than 28 ppmv, dry, corrected to 3% oxygen (0.02 lb/MM Btu) averaged over any consecutive 8 hour period, except for periods during periods of startup and shutdown. [Basis: Cumulative Increase]
- 33. The Owner/Operator shall equip Sources S-21 and S-22 with low NOx burners. The Owner/Operator shall operate the low NOx burners systems in accordance with the manufacturer's recommended procedures during periods of operation. [Basis: BAAQMD 9-10]
- 34. Not Implemented
- 35. Not Implemented
- 36. Completed
- 37. The Owner/Operator shall limit the total combined heat input for S-21 and S-22 to no more than 106 million therms (10.6 trillion Btus) in any 365 consecutive day period. [Basis: Cumulative Increase, Offsets]
- 38. The Owner/Operator shall limit the firing rate of the S-21 Hydrogen Reforming Furnace to no more than 614 million Btu per hour (maximum firing rate) for all fuels combusted at the source. (Basis: Cumulative Increase, Toxics)
- 39. The Owner/Operator shall limit the firing rate of the S-22 Hydrogen Reforming Furnace to no more than 614 million Btu per hour (maximum firing rate) for all fuels combusted at the source. (Basis: Cumulative Increase, Toxics)
- 40. Deleted. [Basis: The Owner/Operator has installed the continuous emission monitor for S-21 for NOx and O2.]
- 41. Deleted. [The Owner/Operator has installed the continuous emission monitor for S-22 for NOx and O2.]

#### **TANKAGE**

#### S-227 175,000 Barrel Fixed Roof Tank

- 42. The S-227 Pentane Storage Tank installed by the Owner/Operator shall be a fixed roof tank connected to the A-46/A-47 vapor recovery system. NSPS requirements of 40 CFR 60, Subpart Kb will be applied to this tank. [Basis: Cumulative Increase, Offsets, Toxics]
- 43. The Owner/Operator shall operate Tank S-227 with a minimum pressure relief valve (PRV) set pressure of 1 psig. [Basis: BAAQMD 8-5]
- 44. The Owner/Operator shall not store any material in S-227 storage tank, other than the materials specified in this application for the tank, if the new material will result in an emission increase of POC or an increase in toxicity. This prohibition includes (but is not

limited to) the storage of a new material with a) higher vapor pressure at actual storage temperature; b) lower initial boiling point; c) larger percentage of a toxic component; and d) new toxic compounds. The Owner/Operator shall notify the District, in writing, of any proposed product storage changes, as prohibited herein, and received written authorization from the APCO in advance of any such use. [Basis: Cumulative Increase, Offsets, BACT, Toxics]

45. The Owner/Operator shall vent all POC emissions from tank cleaning, degassing, or product changeout to a control device with an overall capture and destruction efficiency of at least 90%, on a mass basis. [Basis: RACT]

#### **TOXICS**

46. Completed. [Basis: The Owner/Operator has performed the necessary source tests for toxics.]

#### OFFSETS (DISTRICT EMISSIONS BANK)

- 47. Completed. [Basis: The Owner/Operator has met their offset obligation for NOx, POC, SO2 and PM10.]
- 48. Completed. [Basis: The Owner/Operator has paved two heavily traveled roads in the Refinery to provide contemporaneous emissions reduction for PM10.]
- 49. Completed. . [Basis: The Owner/Operator has made the paved road wide enough to for vehicles to pass without excursion onto the unpaved shoulders.]
- 50. Deleted. [Basis: No longer required to monitor mass emissions from the S-21 and S-22 Hydrogen Furnaces through a condition due to required monitoring of furnaces under Regulation 9, Rule 10.]
- 51. The total daily throughput of alkylate from the Alkylation Unit (S-1007)shall not exceed 22,800 barrels. (Basis: BACT, Cumulative Increase)
- 52. The Alkylate Production Project in Application 3782, when installed, shall consist of no more than 100 valves, 200 connectors/flanges, 2 pressure relief valves and 3 pumps. The POC emission from the entire project shall not exceed 0.174 ton/year. The annual mass limit for POC may be adjusted based on the final fugitive component count. Any additional POC offsets required due to a larger fugitive component count would need to be provided prior to permit issuance. (Basis: Cumulative Increase, Offsets)

Condition# 10633 For Source S-97 Floating Roof Tank (TK-1776)

#### **VI. Permit Conditions**

1. The Owner/Operator shall record the total daily throughput of product from S-97 in a Districtapproved log. This record shall be retained for a period of at least five years from date of entry. The logs shall be kept on site and made available to District staff upon request. [Basis: 2-6-503]

#### Condition# 10797

For Source S-207, Floating Roof Tank

- 1. The Owner/Operator shall limit the total release of emissions from this S-207 storage tank to no more than 4.62 tons of POC emissions in any rolling 365 consecutive day period.:: [Basis: Cumulative Increase]
- 2. Deleted [Basis: MTBE Phaseout Application 2035]
- 3. Deleted. [Basis: The inspection and maintenace program for fugitive components are covered under Regulation 8, Rule 18.]
- 4. The Owner/Operator shall store only mogas/components in the S207 External Roof Storage Tank. [Basis: Cumulative Increase, BACT, Offsets, Toxics]
- 5. Deleted. [Basis: MTBE Phaseout Application 2035]
- 6. The Owner.Operator shall limit the total throughput of mogas/components at S-207 to no more that 16,936,400 barrels in any rolling 365 consecutive day period. [Basis: Cumulative Increase]
- 7. The Owner/Operator shall record the total daily throughput of mogas/components withdrawn from the S-207 Storage Tank in a District approved log. This record shall be retained for a period of at least five years from date of entry. The log shall be kept on site and made available to the District staff upon request. [Basis: Cumulative Increase]
- 8. Deleted. [Basis: MTBE Phaseout Application 2035]
- 9. Deleted. [Basis: MTBE Phaseout Application 2035]

#### Condition# 11030

For Sources S-3 and S-4 Furnaces

- 1. The Owner/Operator shall limit the start-up of the CO Furnaces (S-3 and S-4) to no more than 72 hours. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall limit the shutdown of the CO Furnaces (S-3 and S-4) to no more than 120 hours. [Basis: Cumulative Increase]
- 3. When the Thermal DeNOx Systems (A-52 & A-53) are operational, NOx emissions from the abated sources (S-3 and/or S-4) shall not exceed 150 ppm, dry at 3% oxygen, based on an operating day average. [Basis: BARCT, Cumulative Increase]
- 4. To demonstrate compliance with Parts #1 and 2, the Owner/Operator shall maintain the start-up time and shutdown time of S-3 and S-4 in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least

#### **VI. Permit Conditions**

- 60months from the date on which a record is made. [Basis: Cumulative Increase]
- 5. Deleted. [Basis: The Owner/Operator has conducted the District approved source test on S-3 and S-4 to demonstrate compliance with Part #3. The Owner/Operator has provided the source test report to the District.]
- 6. Effective from May 31, 1995, the Owner/Operator shall abate the NOx emissions from the CO Furnaces (S-3 and S-4) at all times by the A-52 and/or A-53 Thermal DeNOx Systems. [Basis: Cumulative Increase]
- 7. The Owner/Operator shall limit the total consumption of refinery fuel gas plus CO at each source to no more than the following:
  - S-3 CO Furnace: 46.3 million therms per year (Basis: Cumulative Increase)
  - S-4 CO Furnace: 22.7 million therms per year (Basis: Cumulative Increase)

#### Condition# 11879

For Source S-150 Sour Wastewater Tank

- 1. The Owner/Operator shall limit the emissions of nitrogen oxides (NOx) to no more than 25 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)
- 2. The Owner/Operator shall limit the emissions of carbon monoxide (CO) to no more than 50 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)
- 3. The Owner/Operator shall maintain the VOC destruction efficiency of the A-57 Thermal Oxidizer at or above 98.5%, by weight. (Basis: NSPS and NESHAPS)
- 4. The Owner/Operator shall maintain the oxidation temperature of A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum temperature) as averaged over any consecutive 3-hour period. If source test data demonstrate that an alternate temperature is necessary for maintaining compliance with Part #3, the Owner/Operator shall maintain the oxidation temperature at or above the minimum temperature limit, averaged over any consecutive 3-hour period, as determined by the source test. (Basis: Regulation 2-1-403)
- 5. The Owner/Operator shall equip A-57 Thermal Oxidizer with a temperature measuring device capable of continuously measuring and recording the oxidation temperature in A-57. (Basis: Temperature Monitoring)
- 6. This device shall be accurate to within 20 degrees Fahrenheit (oF) and shall be maintained in accordance with manufacturer's recommendations. This temperature monitor shall be used to determine compliance with the temperature requirement in Part 4. (Basis: Regulation 1-521)
- 7. Deleted. [Basis: Replaced with 3-hour averaging in Part 4 with no allowable excursions]
- 8. No later than 30 days after startup, the Owner/Operator shall conduct a BAAQMD approved source test to determine compliance with the NOx, CO, and VOC limitations.

All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance Verification)

- 9. The Owner/Operator shall abate this source by two 700 lb (minimum) carbon canisters in series (A-37) and/or the A-57 Thermal oxidizer at all times when the source is in service, except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]
- 10. The Owner/Operator shall limit the total combined non-methane hydrocarbons (NMHC) emissions emitted from A-36, A-37 and A-57 to no more than 15 pounds per day, as averaged over one month. [Basis: Regulation 8, Rule 2]
- 11. The Owner/Operator shall determine NMHC from the flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The Owner/Operator shall use District approved monitors. The Owner/Operator shall calculate the NMHC concentration by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When commissioning A-37 from standby service, A-37 carbon shall be replaced weekly until the continuous VOC monitor on A-37 outlet is operating. [Basis: Cumulative Increase]
- 12. To demonstrate compliance with Part 10, the Owner/Operator shall maintain the following records in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating. [Basis: Cumulative Increase] a. Daily NMHC emission rate in pounds per day.
  - b. Daily NMHC emission rate, as averaged over one month, in pounds per day.
  - c. Daily flow rate and outlet NMHC concentration.
  - d. Carbon canister changeout date.
  - e. Total volume of gas recorded between carbon canister changeout.
- 13. The Owner/Operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]
- 14. The Owner/Operator shall install a flow indicator or equivalent device on the vent

#### **VI. Permit Conditions**

- stream to the control equipment to ensure that the vapors are being routed to the equipment. [Basis: Cumulative Increase]
- 15. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]
- 16. The Owner/Operator shall use a monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream. [Basis: Cumulative Increase]

#### Condition# 11880

For Sources S-193, S-196, S-205, and S-206 Wastewater Tanks

- 1. The Owner/Operator shall abate this source using two 1200 lb (minimum) carbon canisters (A-36) in series at all times. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall limit the combined non-methane hydrocarbons (NMHC) emissions at the outlets of the second carbon canisters of A-36 and A-37 to no more than 15 pounds per day, as averaged over one month. [Basis: Regulation 8, Rule 2]
- 3. The Owner/Operator shall determine the NMHC flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The Owner/Operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. [Basis: Cumulative Increase]
- 4. To demonstrate compliance with Part (2), the Owner/Operator shall maintain the following records in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. [Basis: Cumulative Increase]
  - a. Daily NMHC emission rate in pounds per day.
  - b. Daily NMHC emission rate, as averaged over one month, in pounds per day.
  - c. Daily flow rate and outlet NMHC concentration.
  - d. Carbon canister changeout date
  - e. Total volume of gas recorded between carbon canister changeout.
- 5. The Owner/Operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and any appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]
- 6. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]
- 7. The Owner/Operator shall use a monitoring device that continuously indicates and

records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream. [Basis: Cumulative Increase

Condition# 11882

For Sources S-199 Fixed Roof Tank D-2055 and S-200 Collection Drum D-2056

- 1. The Owner/Operator shall limit the emissions of nitrogen oxides (NOx) to no more than 25 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD Regulation 2-2-112)
- 2. The Owner/Operator shall limit the emissions of carbon monoxide (CO) to no more than 50 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD Regulation 2-2-112)
- 3. The Owner/Operator shall maintain the VOC destruction efficiency of the A-57 Thermal Oxidizer at or above 98.5%, by weight. (Basis: NSPS and NESHAPS)
- 4. The Owner/Operator shall maintain the oxidation temperature of A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum temperature) as averaged over any consecutive 3-hour period. If source test data demonstrate that an alternate temperature is necessary for maintaining compliance with Part #3, the Owner/Operator shall maintain the oxidation temperature at or above the minimum temperature limit, averaged over any consecutive 3-hour period, as determined by the source test. (Basis: Regulation 2-1-403)
- 5. The Owner/Operator shall equip the A-57 Thermal Oxidizer with a temperature measuring device capable of continuously measuring and recording the outlet temperature in A-57. [Basis: NSPS]
- 6. This device shall be accurate to within 20 degrees Fahrenheit (oF) and shall be maintained in accordance with manufacturer's recommendations. This temperature monitor shall be used to determine compliance with the temperature requirement in Part 4. (Basis: Regulation 1-521)
- 7. Deleted. [Basis: Replaced with 3-hour averaging in Part 4 with no allowable excursions.]
- 8. No later than 30 days after startup, the Owner/Operator shall conduct a BAAQMD approved source test to determine compliance with the NOx, CO, and VOC limitations. All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance Verification)
- 9. The Owner/Operator shall abate this source by two 700 lb (minimum) carbon canisters in series (A-37) and/or the A-57 Thermal oxidizer at all times when the source is in service, except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]

- 10. The Owner/Operator shall limit the total combined non-methane hydrocarbons (NMHC) emissions emitted from A-36, A-37 and A-57 to no more than 15 pounds per day, as averaged over one month. [Basis: Regulation 8, Rule 2]
- 11. The Owner/Operator shall determine the NMHC from the flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The Owner/operator shall use District approved monitors. The Owner/Operator shall calculate the NMHC concentration by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When recommissioning A-37 carbon shall be replaced weekly until the continuous VOC monitor on A-37 outlet is operating. [Basis: Cumulative Increase, ]
- 12. To demonstrate compliance with Part 10, the Owner/Operator shall maintain the following records in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating. [Basis: Cumulative Increase] a. Daily NMHC emission rate in pounds per day.
  - b. Daily NMHC emission rate, as averaged over one month, in pounds per day.
  - c. Daily flow rate and outlet NMHC concentration.
  - d. Carbon canister changeout date.
  - e. Total volume of gas recorded between carbon canister changeout.
- 13. The Owner/Operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]
- 14. The Owner/Operator shall install a flow indicator or equivalent device on the vent stream to the control equipment to ensure that the vapors are being routed to the equipment. [Basis: Cumulative Increase]
- 15. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]
- 16. The Owner/Operator shall use a monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream. [Basis: Cumulative Increase]

Condition# 11883
For Source S-201 (Truck Loading Operation)

#### **VI. Permit Conditions**

- 1. The Owner/Operator shall abate Source S-201 using a vapor balancing system (A-39) at all times. [Basis: Cumulative Increase]
- 2. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]

#### Condition# 11884

For Source S-202 (Truck Loading Operation)

- 1. The Owner/Operator shall abate S-202 using a vapor balancing system (A-38) at all times. [Basis: Cumulative Increase]
- 2. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]

#### Condition# 11888

For Source S-131 Wastewater Sludge Drum-Tank TKD-2069

- 1. The Owner/Operator shall limit the emissions of nitrogen oxides (NOx) to no more than 25 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAOMD Source Test Method. (Basis: 2-2-112)
- 2. The Owner/Operator shall limit the emissions of carbon monoxide (CO) to no more than 50 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: 2-2-112)
- 3. The Owner/Operator shall maintain the VOC destruction efficiency of the A-57 Thermal Oxidizer at or above 98.5%, by weight. (Basis: NSPS and NESHAPS)
- 4. The Owner/Operator shall maintain the oxidation temperature of A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum temperature) as averaged over any consecutive 3-hour period. If source test data demonstrate that an alternate temperature is necessary for maintaining compliance with Part #3, the Owner/Operator shall maintain the oxidation temperature at or above the minimum temperature limit, averaged over any consecutive 3-hour period, as determined by the source test. (Basis: Regulation 2-1-403)
- 5. The Owner/Operator shall equip the A-57 Thermal Oxidizer with a temperature measuring device capable of continuously measuring and recording the outlet temperature in A-57. [Basis: Monitoring]
- 6. This device shall be accurate to within 20 degrees Fahrenheit (oF) and shall be maintained in accordance with manufacturer's recommendations. The Owner/Operator shall use this temperature monitor to determine compliance with the temperature requirement in Part 4. (Basis: Regulation 1-521)
- 7. Deleted. [Basis: Replaced with 3-hour averaging in Part 4 with no allowable excursions.]
- 8. No later than 30 days after startup, the Owner/Operator shall conduct a BAAQMD

approved source test to determine compliance with the NOx, CO, and VOC limitations. All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance Verification)

- 9. The Owner/Operator shall abate this source by two 700 lb (minimum) carbon canisters in series (A-37) and/or the A-57 Thermal oxidizer at all times when the source is in service, except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]
- 10. The Owner/Operator shall limit the total combined non-methane hydrocarbons (NMHC) emissions emitted from A-36, A-37 and A-57 to no more than 15 pounds per day, as averaged over one month. [Basis: RACT]
- 11. The Owner/Operator shall determine the NMHC from the flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The Owner/Operator shall use District approved monitors. The Owner/Operator shall calculate the NMHC concentration by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When recommissioning A-37 from standby services, A-37 carbon shall be replaced weekly until the continuous VOC monitor on A-37 outlet is operating. [Basis: Cumulative Increase]
- 12. To demonstrate compliance with Part 10, the Owner/Operator shall maintain the following records in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating. [Basis: Cumulative Increase] a. Daily NMHC emission rate in pounds per day.
  - b. Daily NMHC emission rate, as averaged over one month, in pounds per day.
  - c. Daily flow rate and outlet NMHC concentration.
  - d. Carbon canister changeout date.
  - e. Total volume of gas recorded between carbon canister changeout.
- 13. The Owner/Operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and appurtenance in vapor services on this source. If a leak greater than 500 ppm is detected by the operator, the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]
- 14. The Owner/Operator shall install a flow indicator or equivalent device on the vent stream to the control equipment to ensure that the vapors are being routed to the equipment. [Basis: Cumulative Increase]

#### **VI. Permit Conditions**

- 15. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]
- 16. The Owner/Operator shall use a monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream. [Basis: Cumulative Increase

#### Condition# 12727

For Sources S-232 ESP Fines Vacuum Conveying system and S-233 ESP Fines Storage Bin]

- 1. The Owner/Operator shall limit the throughput of ESP fines at the Vacuum Conveying System (S-232) to no more than 7300 tons during any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- 2. The Owner/Operator shall limit the throughput of ESP fines at the ESP Fines Storage Bin (S-233) to no more than 7300 tons during any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- 3. The Owner/Operator shall properly abate the operation of S-232 by the Vacuum Filter (A-54). [Basis: Cumulative Increase]
- 4. The Owner/Operator shall properly abate the operation of S-233 by the Bin Filter (A-55). [Basis: Cumulative Increase]
- 5. To demonstrate compliance with Parts #1 and 2, the Owner/Operator shall maintain the monthly throughput records of ESP fines at S-232 and S-233 in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. [Basis: Cumulative Increase]

#### Condition# 13045

For Source S-143 Fixed Roof Tank

- 1. The Owner/Operator shall limit the throughput of corrosion inhibitor at the Corrosion Inhibitor Tank (S-143) to no more than 15,000 gallons during any rolling 12 consecutive month period. [Basis: Cumulative Increase]
- 2. To demonstrate compliance with Part #1, the Owner/Operator shall record the throughput of corrosion inhibitor at S-143 monthly in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. [Basis: Cumulative Increase]

Condition# 13319

For Sources S-194 Oil/Water/Sediment Separator 2006 S-195 Oil/Water/Sediment Separator 2056

S-197 Induced Static Flotation Cell 2007 S-198 Induced Static Flotation Cell 2057

- 1. The Owner/Operator shall limit the emissions of nitrogen oxides (NOx) to no more than 25 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)
- 2. The Owner/Operator shall limit the emissions of carbon monoxide (CO) to no more than 50 ppm, by volume, dry, corrected to 3% oxygen, as determined by the applicable BAAQMD Source Test Method. (Basis: BAAQMD 2-2-112)
- 3. The Owner/Operator shall maintain the VOC destruction efficiency of the A-57 Thermal Oxidizer at or above 98.5%, by weight. (Basis: NSPS and NESHAPS)
- 4. The Owner/Operator shall maintain the oxidation temperature of A-57 Thermal Oxidizer at or above 1400 degrees Fahrenheit (minimum temperature) as averaged over any consecutive 3-hour period. If source test data demonstrate that an alternate temperature is necessary for maintaining compliance with Part #3, the Owner/Operator shall maintain the oxidation temperature at or above the minimum temperature limit, averaged over any consecutive 3-hour period, as determined by the source test. (Basis: Regulation 2-1-403)
- 5. The Owner/Operator shall equip the A-57 Thermal Oxidizer with a temperature measuring device capable of continuously measuring and recording the outlet temperature in A-57. [Basis: NSPS]
- 6. This device shall be accurate to within 20 degrees Fahrenheit (oF) and shall be maintained in accordance with manufacturer's recommendations. This temperature monitor shall be used to determine compliance with the temperature requirement in Part 4. (Basis: Regulation 1-521)
- 7. Deleted. [Basis: Replaced with 3-hour averaging in Part 4 with no allowable temperature excursions.]
- 8. No later than 30 days after startup, the Owner/Operator shall conduct a BAAQMD approved source test to determine compliance with the NOx, CO, and VOC limitations. All source testing shall be done in accordance with the District's Manual of Procedures. The Owner/Operator shall install all necessary source test ports, subject to the approval of the Manager of Source Test in the BAAQMD Technical Services Division. The source test results for NOx, CO and VOC shall be submitted to the Manager of Source Test no later than 30 days after completeion of the source test. (Basis: Compliance Verification)
- 9. The Owner/Operator shall limit the total combined influent of wastewater to be treated at anytime by S-194, S-195, —S-197 and S-198 to not exceed 3000 gallons per minute. [Basis: Cumulative Increase]
- 10. A Owner/Operator shall install a flow indicator or equivalent device on the vent stream to the control equipment to ensure that the vapors are being routed to the equipment.

  [Basis: NSPS]
- 11. The Owner/Operator shall conduct a quarterly inspection and maintenance program on any atmospheric pressure relief device, pressure-vacuum valve, and appurtenance in vapor service on this source. If a leak greater than 500 ppm is detected by the operator,

#### **VI. Permit Conditions**

- the leak shall be minimized within 24 hours and repaired within 7 days, and if the leak is detected by the APCO, repaired within 24 hours. [Basis: RACT]
- 12. Deleted. [Basis: The inspection and maintenance program for fugitive components is covered under Regulation 8, Rule 18.]
- 13. Deleted. [Basis: The Owner/Operator has replaced the API Separator (S-47) and two dissolved air flotation tanks (S-152 and S-153).]
- 14. The Owner/Operator shall abate this source by two 700 lb (minimum) carbon canisters in series (A-37) and/or the A-57 Thermal oxidizer at all times when the source is in service, except during inspection, maintenance and wastewater sampling. [Basis: Cumulative Increase]
- 15. The Owner/Operator shall limit the total combined non-methane hydrocarbons (NMHC) emissions emitted from A-36, A-37 and A-57 to no more than 15 pounds per day, as averaged over one month. [Basis: Cumulative Increase]
- 16. The Owner/Operator shall determine the NMHC from the flow rates and NMHC concentrations at the outlets of the second carbon canisters of A-36 and A-37 in accordance with ST-7 of the District's Manual of Procedures Volume IV. The Owner/Operator shall use District approved monitors. NMHC concentration shall be calculated by subtracting the average known methane content of 2500 parts per million (PPM) from the total hydrocarbon analyzer reading measured at the outlets of the second carbon canisters of A-36 and A-37. Alternatively, the methane contents can also be obtained by actual gas samples. When recommissioning A-37 from standby service, A-37carbon shall be replaced weekly until the continuous VOC monitor on A-37 outlet is operating. [Basis: Cumulative Increase]
- 17. To demonstrate compliance with Part 15, the Owner/Operator shall maintain the following records in a District approved log. These records shall be kept on site and made available for District inspection for a period of at least 60 months from the date on which a record is made. NMHC emissions from A-57 shall be based upon the results of a District approved source test. NMHC emissions from A-37 shall be based on historic data until A-37 continuous VOC monitor is operating. [Basis: Cumulative Increase] a. Daily NMHC emission rate in pounds per day.
  - b. Daily NMHC emission rate, as averaged over one month, in pounds per day.
  - c. Daily flow rate and outlet NMHC concentration.
  - d. Carbon canister changeout date.
  - e. Total volume of gas recorded between carbon canister changeout.
- 18. The Owner/Operator shall use a monitoring device that continuously indicates and records the VOC concentration level or reading of organics in the exhaust gases of this abatement device outlet gas stream or inlet and outlet gas stream. [Basis: Cumulative Increase]

Condition# 14318

For Source S-23 Process Oil Furnace

1. The Owner/Operator shall limit the emissions of NMHC from S-23 (Furnace F-401) to

### **VI. Permit Conditions**

- no more than 10 lb/day. [Basis: BACT]
- 2 The Owner/Operator shall limit the emission of NOx to no more than 40 ppm averaged over any 8 hour period @ 3% oxygen and dry. [Basis: Cumulative Increase]
- 3. The Owner/Operator shall continuously monitor the NOx and oxygen in accordance with the Manual of Procedures. [Basis: Cumulative Increase]
- 4. Owner/Operator shall limit the firing of S-23 furnace to at or below 200 x million BTU/Hr (maximum firing rate) heat input for any one hour period and 185 x million BTU/Hr average for a 24 hour period based on the gross heating value of the fuel gas. This 24 hour period shall be midnight to midnight. [Basis: Cumulative Increase]
- 5. As per Regulation 10-14, the Owner/Operator shall continuously monitor the hydrogen sulfide and shall limit the hydrogen sulfide to no more than 160 ppm (dry). [Basis: Cumulative Increase, BAAQMD 10-14]
- 6. The Owner/Operator shall make all data pertaining to (1), (2), (3), (4), and (5) above readily accessible to BAAQMD field personnel upon request. [Basis: Compliance Verification through Records]

#### Condition# 15512

For Source S-1010 Hydrogen Plant

1. The Owner/Operator shall route the precursor organic compounds from the deaerator vents associated with the operation of S-1010 Hydrogen Plant downstream to the S-40 and/or S-41 boilers at all times in which the source is in operation. [RACT]

Condition # 16027

For Source S-237 (SG-1032), Boiler

- 1. Fugitive Emissions Components: The Owner/Operator shall install all hydrocarbon valves greater than 2 inches as one of the following types: (1) bellows sealed, (2) live loaded, (3) graphitic-packed, (4) teflon packed valves or (5) equivalent. All flanges installed in the piping systems by the Owner/Operator shall be equipped with graphitic-based gaskets, except in services that are not compatible with graphitic material. Asbestos type gaskets shall be used in service where graphitic-based gaskets are not compatible. [[Basis: BACT]
- 2. Completed.
- 3. Fuel Gas System: The Owner/Operator shall limit the refinery low-pressure fuel gas to no more than any of the following: (a) 100 ppmv H2S, averaged over a 24-hour calendar day and (b) 160 PPM H2S, averaged over any 3-hour period. [Basis: Cumulative Increase, BACT, NSPS>
- 4. Fuel Gas System: Owner/Operator shall limit the refinery low-pressure fuel gas to no more than 51 ppmv of total reduced sulfur, averaged over any consecutive four-quarter period. [Basis: BACT, Contemporaneous offsets for S02 and PM10 emissions>
- 5. Fuel Gas System: The Owner/Operator shall install and operate a District approved continuous gaseous fuel monitor/recorder to determine the H2S content and total

reduced sulfur content of the refinery low pressure fuel gas prior to combustion in any downstream combustion source including the S-237 Boiler. [Basis: Cumulative Increase]

- 6. Fuel Gas System: The Owner/Operator shall calculate and record the 24-hour average H2S content and total reduced sulfur content of the refinery fuel gas, for determining compliance with Parts number 3 and 4, based on the previous 24 individual hourly averages. On a quarterly basis, the Permit Holder shall report: (a) the daily fuel consumption at S-237, (b) daily averaged H2S content of the refinery fuel gas, (c) daily averaged total reduced sulfur content (d) quarterly daily averaged H2S content, (e) quarterly daily averaged total reduced sulfur content and (f) annual averaged total reduced sulfur content using the last four quarters. [Basis: Cumulative Increase]
- 7. The Owner/Operator shall only fire S-237 Boiler natural gas, LPG/pentane gases or refinery fuel gas. In no case shall any combustion source burn a fuel with a H2S concentration exceeding 100 ppmv, averaged over 24 hours (calendar day) or a TRS concentration exceeding 51 ppmv, averaged over any four consecutive quarters.

  [Basis: Cumulative Increase, Toxics, offsets]
- 8. The Owner/Operator shall limit total emissions from this combustion source (S-237) including startups and shutdowns, to no more than the following annual limits: [Basis: Cumulative Increase, Offsets>

Pollutant	Annual (tons
NOx	13.278
CO	44.721
SO2	8.644
PM10	3.132
POC	2.881

Combustion emissions shall be calculated using the following emission factors:

NOx:	Summation of daily emissions using CEM of	data
CO	0.0200 lb/MMBtu	
SO2	0.0069 lb/MMBtu	
PM10	0.0025 lb/MMBtu	
POC	0.0023 lb/MMBtu.	

- 9. The Owner/Operator shall equip the S-237 Boiler with a District approved continuous fuel flow monitor and recorder in order to determine fuel consumption. (This is a parametric monitor as defined in Regulation 1-238.) [Basis: Monitoring and Records>
- 10. Except for no more than 3 minutes in any hour, the Owner/Operator shall limit the

### **VI. Permit Conditions**

Visible emissions from the S-237 Boiler to at or below Ringelmann No. 1.0 or 20% opacity, as required by Regulation 6. [BAAQMD 6-301]

- 11. For startups and shutdowns, the Owner/Operator shall not exceed 24 consecutive hours. The 24-consecutive-hour startup period is in addition to boiler dryout/warmup periods that are limited to not exceed 72 consecutive hours. The 24-hour period does not apply during the initial startup of the Units.S-237 Boiler. [Basis: Cumulative Increase, offsets, operational allowances>
- 12. Except during startup and shutdown, the Owner/Operator shall limit the emissions of nitrogen oxides from the S-237 to no more than 9 ppmv, dry, corrected to 3% oxygen, (0.0106 lb/MMBtu) averaged over any 3 consecutive hours. [Basis: BACT, offsets>
- 13. For the S-237 Boiler, the Owner/Operator shall limit the CO emissions to no more than 50 ppmv, dry, corrected to 3% oxygen, (0.0357 lb/MMBtu) averaged over 8 hours, except during periods of startup and shutdown. Demonstration of compliance will be based on source test data [Basis: BACT]
- 14. The Owner/Operator shall abate S-237 at all times by A-58 Selective Catalytic Reduction System when it is in operation. Operation of the A-58 Selective Catalytic System shall be in accordance with manufacturer's recommended procedures during periods of operation. [Basis: BACT]
- 15. Except during periods of startup and shutdown, Owner/Operator shall limit the ammonia emissions (ammonia slip) from the SCR unit (A-58) to no more than 10 ppmv of ammonia, dry, corrected to 3% oxygen, averaged over any consecutive 3-hour period. Demonstration of compliance shall be based on source test data.

  [Basis: Cumulative Increase, Monitoring, Toxics]
- 16. The Owner/Operator shall install, calibrate, maintain, and operate a District-approved continuous emission monitor and recorder for NOx and O2. [Basis: Monitoring and Records>
- 17. Completed.

### Throughput Limitation

- 18. The Owner/Operator shall limit the total combined heat input for S-237 to no more than 2,505,360 million BTUs (HHV) in any 365 consecutive day period. [Basis: Cumulative Increase, Offsets>
- 19. Owner/Operator shall limit the The total combined heat input for S-237 shall not exceed 7560 million BTUs in any calendar day period. [Basis: Cumulative Increase>
- 20. Deleted. (Basis: same as Condition 16386, Part 1)
- 21. Deleted. (Basis: same as Condition 16386, Parts 2 and 3)

22. The Owner/Operator shall conduct a District-approved source test on an annual basis on Sources S-237 to demonstrate compliance with the limit in part 13 of this condition. The test results shall be provided to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 30 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 2-6-503]

Condition 16186 is obsolete. The source no longer exists.

Condition # 16386

For Sources S-37, (SG-702), Waste Heat Boiler, S-45, (GT-702) Process Gas Turbine

1. Except during startup and shutdown, the Owner/Operator shall limit the combined NOx emissions from the S-45 Gas Turbine and the S-37 Steam Generator, when operated together, to no more than 9 ppmv, dry, @ 15% oxygen, in any consecutive three hour averaging period. <Permanency of Contemporaneous Banking Credit, Offsets>

Deleted. [Basis: NOx limitation is covered by Regulation 9, Rule 9.]

- 3. Except during startup and shutdown, the Owner/Operator shall abate the emissions from the S-45 gas Turbine using the A-51 Selective Catalyst Reduction System at all times in which it is operational. [Basis: Permanency of Contemporaneous Banking Credit, Offsets>
- 4. The Owner/Operator shall abate the emissions from the S-37 Steam Generator Gas Turbine using the A-51 Selective Catalyst Reduction System at all times in which it is in operation, except for the following: [Basis: Permanency of Contemporaneous Banking Credit, Offsets>
  - A. During periods of startups and shutdowns.
  - B. Infrequent periods not to exceed 45 days in any consecutive three year period.
- 5. For startups and shutdowns, the Owner/Operator shall not exceed 24 consecutive hours. The 24-consecutive-hour startup period is in addition to dryout/warmup periods that are limited to not exceed 72 consecutive hours. The 24 hour period does not apply during the initial startup of the units. [Basis: Permanency of Contemporaneous Banking Credit, Offsets>
- 6. The Owner/Operator shall install and operate a continuous emissions monitor (CEM) to continuously monitor the nitrogen oxides (NOx) emissions from this combined system consisting of S-45 and S-37. [Basis: Regulation 9, Rule 9, enforceability of contemporaneous banking credit, offsets>

### **VI. Permit Conditions**

- 7. The Owner/Operator shall limit the total emissions of nitrogen oxides (NOx) emissions for S-37 Steam Generator to no more than 23.851 tons per calendar year. [Basis: Permanency of Actual Emissions Reduction for S-237>
- 8. To demonstrate compliance with the above conditions, the Owner/Operator shall maintain the following records in a District approved log for S-37. These records shall be kept on site and made available for District inspection for a minimum period of five years from date of first entry. [Basis: Banked POC credits requirements>
  - a. Daily usage of refinery fuel gas at S-37, in cubic feet
  - b. Daily usage of refinery fuel gas at S-45, in cubic feet
  - c. Daily HHV of refinery fuel gas
  - d. Daily mass emissions from the combined exhaust, as measured by the CEM
  - e. Computation of daily emissions from S-37. Measured emissions shall be attributed based on S-37 actual fuel usage and real-time emission factor based on CEM data
  - f. Computation of monthly and annual mass emissions from S-37
  - g. Days of startup, shutdown and S-37 singular operations.

#### Condition #17835

For Source S-1027: Light Ends Rail Rack

- 1. The Owner/Operator of the Light Ends Rail Rack (S-1027) shall handle no more than 22,500 barrels per day, as averaged over the quarterly period. [Basis: Cumulative Increase]
- 2. The Owner/Operator of the Light Ends Rail Rack (S-1027) shall handle no more than 8.2125 million barrels of liquefied gases (propanes, butanes, pentanes) in any consecutive four-quarter period. [Basis: Cumulative Increase, Toxics, BACT]
- 3. The Owner/Operator shall maintain quarterly records in a District-approved log. These records shall be retained for a period of at least five years. The logs shall be kept on site and made available to District staff upon request. [Recordkeeping]

#### Condition #18043

For S-1007 Alkylation Unit, S-1014 Virgin Light Ends Splitter, S-1012 Dimersol Unit

1. Total fugitive POC emissions from the MTBE Phaseout Project at the Benicia Refinery (Plant #12626) shall not exceed 0.571 ton in any rolling 12 consecutive month period. The owner/operator shall submit a revised pump, valve and flange count within 15

# VI. Permit Conditions

days of start up in order to show compliance with this permit condition. If fugitive emissions from this source exceed 0.571 ton/year, then the District may adjust the cumulative increase attributable to this permit application before the issuance of the Permit to Operate. <Basis: Cumulative Increase, Toxics>

- 2. Deleted. <Basis: Covered in BAAQMD Regulation 8, Rule 18.>
- 3. Deleted. <Basis: Covered in BAAQMD Regulation 8, Rule 18.>

Condition # 18344

For Source S-1 and S-2

- 1. Deleted. (Application #3902, 1/02)
- 2. Deleted. (Application #3902, 1/02)

Condition # 18422

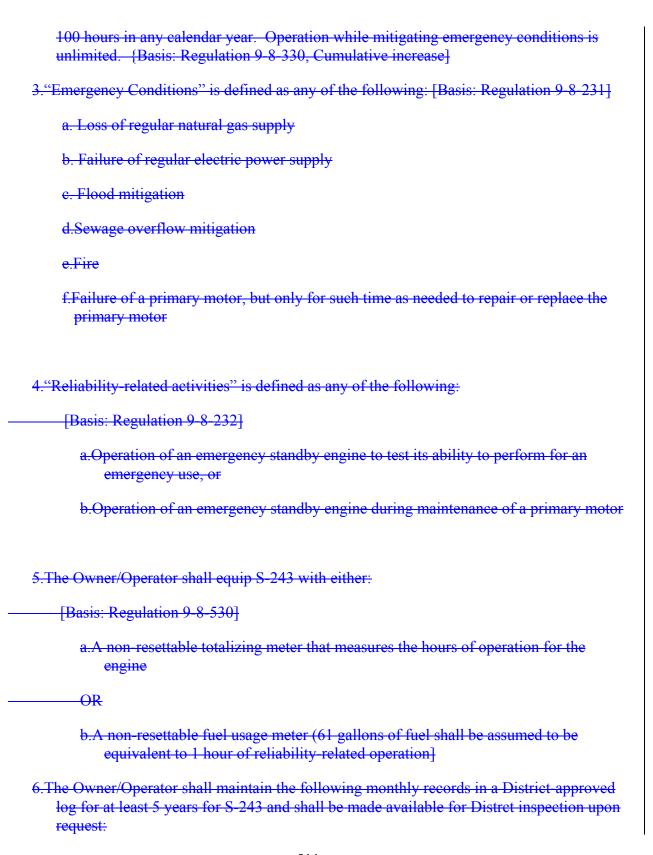

For Source S-239 (TK-1918)

- 1. The Owner/Operator shall limit the total liquid throughput at source S-239 to no more than 102,000 gallons during any consecutive twelve month period. (Basis: Cumulative Increase)
- 2. The Owner/Operator shall equip the S-239 with a submerged fill pipe. (Basis: Regulation 8-5-301)
- 3. In order to demonstrate compliance with the part 1, the owner/operator of tank S-239 shall either maintain the total monthly throughput of each material stored, summarized on a consecutive 12-month basis in a District approved log, or shall be able to generate these records on short notice. These records shall be kept on site and made available for District inspection for a period of 60 months from the date that the record was made. (Basis: Cumulative Increase)

# Condition # 18744

- 1. The Owner/Operator shall fire the S-243 emergency generator exclusively on diesel fuel having a sulfur content no greater than 0.05%, by weight. The sulfur content of the fuel oil shall be certified by the fuel oil vendor. [Basis: Cumulative Increase]
- 2.The Owner/Operator shall only operate S-243 to mitigate emergency conditions or for reliability-related activities. Operation for reliability-related activities shall not exceed

# VI. Permit Conditions

### VI. Permit Conditions

c.Fuel usage

[Basis: Regulations 9-8-530, 1-441]
 a. Total hours of operation
 b. Hours of operation under emergency conditions and a description of the nature of the each emergency condition

**Condition # 18748** 

For Sources S-240, S-241 and S-242 Emergency Generators

1. The Owner/Operator shall fire the engines for emergency generators S-240, S-241, and S-242 exclusively on diesel fuel having a sulfur content no greater than 0.05% by weight. The sulfur content of the fuel oil shall be certified by the fuel oil vendor. [Basis: Cumulative Increase]

"Emergency Conditions" is defined as any of the following: [Basis: Regulation 9-8-231]

a. Loss of regular natural gas supply

b. Failure of regular electric power supply

c. Flood mitigation

d. Sewage overflow mitigation

e. Fire

f. Failure of a primary motor, but only for such time as needed to repair or replace the primary motor

2. The Owner/Operator shall only operate the S-240, S-241, and S-242 to mitigate emergency conditions or for reliability-related activities. Operation for reliability-related activities shall not exceed 100 hours in any calendar year at each engine. Operation while mitigating emergency conditions is unlimited.

[Basis: Regulation 9-8-330, Cumulative Increase]

"Reliability-related activities" is defined as any of the following:

[Basis: Regulation 9-8-232]

a. Operation of an emergency standby engine to test its ability to perform for an emergency use, or

b. Operation of an emergency standby engine during maintenance of a primary motor

The Owner/Operator shall equip the S-240, S-241, and S-242 with either:

non-resettable totalizing meter that measures and records the hours of operation for the engine

<del>OR</del>

b. a non-resettable fuel usage meter; the following. factors shall be used to convert fuel usage to hours of operation:

# VI. Permit Conditions

```
S-240: 31 gal/hr
S-241: 13 gal/hr
S-242: 39 gal/hr
[Basis: Regulation 9-8-530]

4. The Owner/Operator shall maintain the following monthly records in a District-approved log for at least 5 years for S-240, S-241, and S-242 and shall be made available for District inspection upon request: [Basis: Regulations 9-8-530, 1-441]
a. Total hours of operation for each engine
b. Hours of operation under emergency conditions for each engine and a description of the nature of each emergency condition
c. Fuel usage for each engine
```

# VI. Permit Conditions

COND# 18794

APPLICATION 4114; VALERO REFINING COMPANY; PLANT 12626 CONDITIONS FOR S-1004:

- 1. Total throughput of Naphtha through Catalytic Reformer shall not exceed the following limits:
- a. 12,739 KB/Year (34.9 KB/D annual average)
- b. 39.8 KB/Day
- 2. The following monthly records shall be maintained in a District-approved log for at least 5 years for S-1004 and shall be made available for District inspection upon request:

[Basis: Regulations 9-8-530, 1-441]

- a. Daily Maximum Naphtha throughput in KB/D
- b. Daily Average Naphtha throughput in KB/D

Condition 19176

For Sources S-16, S-17, S-18, S-19 Flares (ST-2101AG, ST-1701, ST-2101, ST-2103)

Mis-numbered. See Condition 20806 for correct condition.

**Condition # 19177** 

### **Definitions:**

APCO Air Pollution Control Officer.

MOP Manual of Procedures.

POC Precursor Organic Compound: Rule 1-233

excepting the non-precursor organic compound

listed in Rule 1-234.

1-hour period: Any continuous 60-minute period beginning on the hour.

Calendar Day: Any continuous 24-hour period beginning

at 12:00 AM or 0000 hours.

Year: Any consecutive twelve-month period of time

Heat Input: All heat inputs refer to the heat input at the higher

heating value (HHV) of the fuel, in Btu/scf.

Rolling 3-hour period: Any three-hour period that begins on the hour and does not include start-up or shutdown periods.

Firing Hours: Period of time during which fuel, other than pilot gas, is flowing to a unit, measured in fifteen-minute increments.

MM Btu: million British thermal units

Start-up Mode: The lesser of the first 256 minutes of continuous fuel flow to the Gas Turbine/HRSG after fuel flow is initiated or the period of time from Gas Turbine/HRSG fuel flow initiation until the Gas Turbine/HRSG achieves 60 consecutive minutes of CEM data points in compliance with the emission concentration limits of Parts 18(a) and 18(b) or 19(b) and 19(d).

Shutdown Mode: The 30 minute period of time from non-compliance with any requirement listed in Parts 18(a) and 18(b) or 19(b) and 19(d) involving termination of fuel flow to the Gas Turbine/HRSG.

Corrected Concentration: The concentration of any pollutant (generally NOx, CO, or NH3) corrected to a standard stack gas oxygen concentration. For emission point P-60 (combined exhaust of S-1030 Gas Turbine and S-1031 HRSG duct burners) and emission point P-62 (combined exhaust of S-1032 Gas Turbine and S-1033 HRSG duct burners) the standard stack gas oxygen concentration is 15% O2 by volume on a dry basis.

Commissioning Activities: All testing, adjustment, tuning, and calibration activities recommended by the equipment manufacturers and the construction contractor to insure safe and reliable steady state operation of the gas turbines, heat recovery steam generators, and associated electrical delivery systems.

Commissioning Period: The Period shall commence when all mechanical, electrical, and control systems are installed and individual system start-up has been completed, or when a gas turbine is first fired, whichever occurs first. The period shall terminate when the plant has completed performance testing, is available for commercial operation.

Precursor Organic Compounds (POCs): Any compound of carbon, excluding methane, ethane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate

CEC CPM: California Energy Commission Compliance Program Manager

Conditions for the Approval of the Authority to Construct and Permit to Operate

1. Completed. (Basis: Banking Certificates have been provided)

Prior to the issuance of the Authorities to Construct for this Cogeneration project consisting of Phase I and/or Phase II, the Owner/Operator shall provide the following offsets:

(Basis: NOx and POC) Phase I (S-1030 and S-1031)

NOx: 13.162TPY from Certificate # 703

Phase II (S-1032 and S-1033) NOx: 18.477 TPY Total

18.256 TPY NOx from Certificate #703

0.221 TPY POC for NOx from Certificate #682 POC: 7.401 TPY POC from Certificate #682

### **VI. Permit Conditions**

2. For SO2 emissions offsets, a curtailment group is established as follows: (Basis: SO2 offsets)

**Curtailment Group:** 

**Emission Sources** 

Total Group Baseline

S-237 Steam Boiler SG1032

S-220 Hot Oil Furnace F 4460

MTBE Ships

S-40 Boiler SG2301

Phase I New GT/HRSG (S-1030 & S-1031)

Phase II New GT/HRSG (S-1032 & S-1033)

a. The Owner/Operator shall limit the SO2 emissions from the Curtailment Group to no more than 34.75 TPY for any consecutive 12-month period. Shut down of a source within the group may not change this group annual limit.

b. The Owner/Operator shall calculate the emissions using fuel flow meters and the TRS Gas Chromatograph CEMs data for all sources other than MTBE ships. The Owner/Operator shall calculate emissions from MTBE ships using the District approved method established for the ships in Application #6968, Condition #10797.

c. The Owner/Operator shall submit a quarterly report of the group emissions to the District, in a District approved format, to document compliance.

- 3. The Owner/Operator of the proposed power plant (S-1030, S-1031, S-1032, S-1033) shall minimize emissions of carbon monoxide and nitrogen oxides from these sources to the maximum extent possible during the commissioning period. Parts 3 through 12 shall only apply during the commissioning period as defined above. Unless otherwise indicated, the remaining conditions shall apply after the commissioning period has ended.
- 4. At the earliest feasible opportunity, but no later than 30 days after startup, in accordance with the recommendations of the equipment manufacturers and the construction contractor, the Owner/Operator shall tune the Gas Turbine combustors and Heat Recovery Steam Generator duct burners to minimize the emissions of carbon monoxide and nitrogen oxides.
- 5. At the earliest feasible opportunity, but no later than 30 days after startup, in accordance with the recommendations of the equipment manufacturers and the construction contractor, the Owner/Operator shall install, adjust and operate the A-60/A-62 SCR System, and A-61/A-63 CO Oxidation Catalyst System to minimize the emissions of carbon monoxide and nitrogen oxides from S-1030 Gas Turbine and S-1031 Heat Recovery Steam Generator.
- 6. Coincident with the as-designed operation of A-60/62 SCR System, the Owner/Operator of the Gas Turbines (S-1030 and S-1032) and the HRSG (S-1031 and S-1033) shall comply with the NOx and CO emission limitations specified in parts 18(a), 18(b), 19(b)

### **VI. Permit Conditions**

and 19(d).

- 7. The Owner/Operator shall submit a plan to the District Permit Services Division and the CEC CPM at least four weeks prior to first firing of S-1030 or S-1032 Gas Turbines describing the procedures to be followed during the commissioning of the gas turbine and HRSG. The plan shall include a description of each commissioning activity, the anticipated duration of each activity in hours, and the purpose of the activity. The activities described shall include, but not be limited to, the tuning of the combustors, the installation and operation of the SCR systems and oxidation catalysts, the installation, calibration, and testing of the CO and NOx continuous emission monitors, and any activities requiring the firing of the Gas Turbines (S-1030 or S-1032) and HRSGs (S-1031 or S-1033) without abatement by their respective SCR and CO Catalyst Systems.
- 8. During the commissioning period, the Owner/Operator shall demonstrate compliance with parts 10 through 12 through the use of properly operated and maintained continuous emission monitors and data recorders for the following parameters:

firing hours for the gas turbine and HRSG fuel flow rates through the train stack gas nitrogen oxide (and oxygen) emission concentrations at P-60/P-62 stack gas carbon monoxide emission concentrations P-60/P-62 stack gas SO2 emission concentrations at P-60/P-62 or fuel TRS/H2S concentrations.

The Owner/Operator shall record the monitored parameters at least once every 15 minutes (excluding calibration periods as required by the MOP or when the monitored source is not in operation) for the Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033). The Owner/Operator shall use District-approved methods to calculate heat input rates, NOx mass emission rates, carbon monoxide mass emission rates, SOx mass emission rates, and emission concentrations of NOx, SOx, and CO, summarized for each clock hour and each calendar day. All records shall be retained on site for at least 5 years from the date of entry and made available to District personnel upon request.

- 9. For the District-approved continuous emission monitors specified in part 8, the Owner/Operator shall install, calibrate, and operate it prior to first firing of the Gas Turbines (S-1030 or S-1032) and Heat Recovery Steam Generator (S-1031 or S-1033). After first firing of the turbine, the detection range of these continuous emission monitors shall be adjusted as necessary to accurately measure the resulting range of CO, SOx, and NOx emission concentrations. The type, specifications, and location of these monitors shall be subject to District review and approval.
- 10. The Owner/Operator shall limit the total number of firing hours of S-1030/S-1032 Gas Turbines and S-1031/S-1033 Heat Recovery Steam Generators without abatement of nitrogen oxide emissions by A-60/A-62 SCR System and/or A-61/A-63 Oxidation Catalyst System to no more than 250 hours for each turbine and associated HRSG train

during the commissioning period. Such operation of S-1030/S-1032 Gas Turbine and S-1031/S-1033 HRSG without abatement shall be limited to discrete commissioning activities that can only be properly executed without the SCR or Oxidation Catalyst Systems fully operational. Upon completion of these activities, the owner/operator shall provide written notice to the District Permit Services and Enforcement Divisions and the unused balance of the 250 firing hours, without abatement, for each turbine train shall expire.

- 11. The total mass emissions of nitrogen oxides, carbon monoxide, precursor organic compounds, PM10, and sulfur dioxide that are emitted by the Gas Turbines (S-1030 and S-1032) and Heat Recovery Steam Generators (S-1031 and S-1033) during the commissioning period shall accrue towards the consecutive twelve-month emission limitations specified in part 22.
- 12. The Owner/Operator shall limit the combined pollutant mass emissions from the Gas Turbine (S-1030 and S-1032) and Heat Recovery Steam Generators (S-1031 and S-1033) to no more than thefollowing limits during the commissioning period. These emission limits shall include emissions resulting from the start-up and shutdown of the Gas Turbines and HRSGs (S-1030, S-1031, S-1032 & S-1033).

NOx (as NO2)
CO
513.216 pounds per calendar day
POC (as CH4)
PM10
SO2
360.34 pounds per calendar day
97.776 pounds per calendar day
224.08 pounds per calendar day
516 pounds per calendar day.

- 13. The Owner/Operator shall only fire the Gas Turbines (S-1030 and S-1032) and HRSG Duct Burners (S-1031 and S-1033) on refinery fuel and/or natural gas. (Basis: BACT for SO2 and PM10)
- 14. The Owner/Operator shall limit the combined heat input rate to the power train consisting of a Gas Turbine and its associated HRSG (S-1030 and S-1031 or S-1032 and S-1033) each to no more than 810 MM Btu per hour, averaged over any rolling 3-hour period. The gas turbine in each power train (S-1030 or S-1032) shall not exceed 500 MM Btu/hr, maximum firing rate. (Basis: Cumulative Increase, Permit Fees, Modification, Offsets)
- 15. The Owner/Operator shall limit the combined heat input rate to the power train consisting of a Gas Turbine and its associated HRSG (S-1030 and S-1031 or S-1032 and S-1033) each to no more than 19,440 MM Btu per calendar day. (Basis: Cumulative Increase, Permit Fees, Modification, Offsets)
- 16. The Owner/Operator shall limit the combined cumulative heat input rate for each power train consisting of Phase I (S-1030 and S-1031) or Phase II (S-1032 and S-1033) to no more than 6,351,000 MM Btu per year. (Basis: Offsets, Cumulative Increase, Modification)
- 17. The Owner/Operator shall abate the S-1030/S-1032 Gas Turbines and S-1031/S-1033 HRSGs by the properly operated and properly maintained A-60/A-62 Selective

- Catalytic Reduction (SCR) System and A-61/A-63 CO Oxidation Catalyst System whenever fuel is combusted at those sources and the catalyst bed has reached minimum operating temperature as designated by the manufacturer. (Basis: BACT for NOx)
- 18. The Owner/Operator of the Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033) when firing natural gas exclusively shall comply with requirements (a) through (f) under all operating scenarios, including duct burner firing mode. Requirements (a) through (f) do not apply during a start-up or shutdown mode. (Basis: BACT, PSD, and Toxic Risk Management Policy)
- 18a(1). The Owner/Operator shall limit the emissions of nitrogen oxides (NOx) at emission points P-60 or P-62 to no more than 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. (Basis: BACT for NOx when firing natural gas)
- 18a(2) After the first 3 hours of operation of the Phase II Cogeneration Unit on natural gas exclusively during a changeover from refinery gas, the Owner/Operator shall limit the emissions of nitrogen oxides (NOx) at emission point P-62 to no more than 2.0 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. During this three hour transition period, the Emissions of nitrogen oxides (NOx) at emission point P-62 shall not exceed 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over one hour period. (Basis: Phase II BACT for NOx when firing natural gas)
- 18b. Owner/Operator shall limit the carbon monoxide emissions concentration at P-60 or P-62 to no more than 6 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-clock hour period. (Basis: BACT for CO when firing natural gas)
- 18c. The Owner/Operator shall limit the Ammonia (NH3) emission concentrations at P-60 or P-62 to no more than 10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-hour period. (Basis: Toxics)
  - 18d. The Owner/Operator shall limit the precursor organic compound (POC) mass emissions (as CH4) from P-60 or P-62 to no more than 2.0372 pounds per hour or 0.002515 Lb/MM Btu when firing natural gas throughout each gas turbine/HRSG train. (Basis: BACT for POC when firing natural gas)
- 18e. For sulfur dioxide (SO2) emissions, the Owner/Operator shall limit the sulfur content in the natural gas to no more than 1.0 grain per 100 scf of natural gas. The Owner/Operator shall use standard pipeline quality natural gas as supplied by PG&E. The Owner/Operator shall demonstrate compliance in accordance with part # 35. (Basis: BACT for SO2 when firing natural gas)
- 18f. For particulate (PM10) emissions, Owner/Operator shall limit the sulfur content in the natural gas to no more than 1.0 grain per 100 scf of natural gas. The Owner/Operator shall use standard pipeline quality natural gas as supplied by PG&E. The Owner/Operator shall demonstrate compliance in accordance with part # 35. (Basis: BACT for PM10 when firing natural gas)

- 19. The Owner/Operator of the Gas Turbines (S-1030 and S-1032) and HRSGs (S-1031 and S-1033) shall comply with requirements (a) through (h) under all operating scenarios, including duct burner firing mode. Requirements (a) through (h) do not apply during a start-up or shutdown mode. (Basis: BACT, PSD, and Toxic Risk Management Policy)
- 19a. The Owner/Operator shall limit the emissions of nitrogen oxides (NOx), calculated in accordance with District approved methods as NO2, at P-60 (the combined exhaust point for the S-1030 Gas Turbine and the S-1031 HRSG after abatement by A-60 SCR System) or P-62 (the combined exhaust point for the S-1032 Gas Turbine and the S-1033 HRSG after abatement by the A-62 SCR system) to no more than 7.29 pounds per clock hour. (Basis: BACT for NOx, Offsets)
- 19b. TheOwner/Operator shall limit the emissions of nitrogen oxides (NOx) at emission points P-60 or P-62 to no more than 2.5 ppmv, on a dry basis, corrected to 15% O2, averaged over any 3-clock hour period (Basis: BACT for NOx)
- 19c. The Owner/Operator shall limit the carbon monoxide mass emissions at P-60 or P-62 no mor e than 10.692 pounds per clock hour, averaged over any rolling 3-hour period (Basis: PSD for CO)
- 19d. The Owner/Operator shall limit the carbon monoxide emission concentration at P-60 or P-62 to no more than 6 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-clock hour period. (Basis: BACT for CO)
- 19e. The Owner/Operator shall limit the Ammonia (NH3) emission concentrations at P-60 or P-62 to no more than 10 ppmv, on a dry basis, corrected to 15% O2, averaged over any rolling 3-hour period. (Basis: Toxics)
- 19f. The Owner/Operator shall limit the precursor organic compound (POC) mass emissions (as CH4) at P-60 or P-62 to no more than 2.037 pounds per hour. The Owner/Operator shall demonstrate compliance on source test results. (Basis: BACT)
- The Owner/Operator shall limit the sulfur dioxide (SO2) mass emissions at P-60 or P-62 to no more than 10.75 pounds per hour (rolling 24 hour average). The Owner/Operator shall limit the sulfur concentrations in the refinery fuel gas to no more than 35 ppm TRS (rolling consecutive 365 day average). (Basis: BACT)

  The Owner/Operator shall limit the Sulfur concentrations in fuel gas fired in S-1030, S-1031, S-1032 and S-1033 to no more than 100 ppm Totaled Reduced Sulfur (rolling 24 hour average). (Basis: BACT)

  The Owner/Operator shall limit the hydrogen sulfide (H2S) concentrations in refinery fuel gas to no more than 160 ppm (rolling consecutive 3-hour average). (Basis: NSPS)
- 19h. The Owner/Operator shall limit the particulate matter (PM10) mass emissions from P-60 or P-62 to no more than 4.65 pounds per hour averaged over any consecutive 24-hours nor 1.55 pounds per hour averaged over a calendar year. This limit is subject to adjustment based on the results of source tests, in no case, however, may the adjusted limit exceed 4.65 lb/hr averaged over any consecutive 24-hours. Demonstration of compliance will be based on source test results. (Basis: BACT for PM10)
- 20. The Owner/Operator shall limit the sulfuric acid emissions (SAM) from P-60 and P-62

combined to no more than 7 tons in any consecutive four quarters. (Basis: PSD)

- 21. The Owner/Operator shall commence a District approved initial source test within 60 days of startup to demonstrate compliance with the NOx, CO, POC, TRS, SO2, PM10, NH3, and SAM levels in Parts number 18, 19 or 20. For purposes of SAM, the Owner/Operator shall also test for SO3 and ammonium sulfates. The Owner/Operator shall submit the test results to the District within 60 days of completion of the field test. The test should verify emission compliance at 80% or more of maximum firing on:
  - 1. Gas Turbine firing natural gas only
  - 2. Gas Turbine and HRSG firing natural gas only
  - 3. Gas Turbine firing refinery fuel gas only
  - 4. Gas Turbine and HRSG firing refinery fuel gas only.

[Basis: PSD, BACT, Toxic Risk Management Policy]

- 22. The Owner/Operator shall limit the total emissions from each power train consisting of Phase I and Phase II (S-1030, S-1031, S-1032 and S-1033) to no more than the following annual limits (365 day rolling average): (Basis: Cumulative Increase, Offsets, PSD)
- 22a. Phase I (S-1030 and S-1031)

NOx - 28.603 TPY (based on CEM data)

 $POC-8.579\ TPY\$  (based on Gas Turbine/HRSG POC emissions of 7.983 TPY plus fugitive emissions of 0.596 TPY)

SOx - 15.0 (based on TRS measurement)

CO - 41.9285 TPY (based on CEM data)

PM10 - 6.803 TPY (based on source test results)

Phase II (S-1032 and S-1033)

NOx - 28.603 TPY (based on CEM data)

POC – 8.332 TPY (based on Gas Turbine POC emissions of 7.983 TPY plus fugitive emissions of 0.349 TPY)

SOx - 15.0 (based on TRS measurement)

CO - 41.9285 TPY (based on CEM data)

PM10 – 6.803 TPY (based on source test results).

22b. The PM10 emissions may be adjusted based on source test results for S-1030, S-1031, S-1032 and S-1033) if the particulate emission rate exceeds the assumed level. In no case shall the adjustment when added to the assumed level for Phase I exceed a total of 10.919 tons per year of PM10 emissions. This allowance is based only on the construction of Phase I. If Phase II is constructed, the adjustment when added to the assumed level in Phase I and Phase II, including PM10 emissions from the exempt wet cooling tower, shall not exceed a project total of 15.477 tons per year of PM10. The Cogeneration project increase in PM10 is limited to the available offsets for the proposed project, i.e. the contemporaneous emission reductions from the shutting down of three boilers (S-38, S-39 and S-41). The owner shall submit a

- new application for any increase in PM10 beyond the allowable level. (Basis: Cumulative Increase, Offsets)
- 22c. The PM10 emissions may be adjusted based on the use of recycled water in the exempt wet cooling tower instead of fresh water. In no case shall the adjustment when added to the assumed PM10 level on fresh water exceed the total of 3.8 tons per year for the wet cooling tower (restricted to toxic risk values). This adjustment along with the allowable adjustment in Part 22(b) shall not exceed a combined total of 10.919 tons/year in Phase I or 15.477 tons/year for both phases. The Cogeneration project increase in PM10 is limited to the available offsets for the proposed project, i.e. the contemporaneous emission reductions from the shutting down of three boilers (S-38, S-39 and S-41). The owner shall submit a new application for any increase in PM10 beyond the allowable level. (Basis: Cumulative Increase, Offsets)
- 22d. The Owner/Operator shall prepare an annual calendar-year report and submit it to the District documenting compliance with these annual limitations on mass emissions. The Owner/Operator shall submit the report to the District no later than 60 days after the close of the calendar year. (Basis: Compliance Monitoring)
- 23. To demonstrate compliance with parts 19(f), 19(g),19(h), 20 and parts of 22, the Owner/Operator shall calculate and record on a daily basis, the Precursor Organic Compound (POC) mass emissions, Fine Particulate Matter (PM10) mass emissions (including condensable particulate matter), Sulfuric Acid Mist (SAM) and Sulfur Dioxide (SO2) mass emissions from each power train. The Owner/Operator shall use the actual Heat Input Rates and District-approved emission factors to calculate these emissions. The calculated emissions shall be presented as follows:
  - (a) For each calendar day, the Owner/Operator shall summarize the POC, PM10, SAM and SO2 emissions for the combined power train: [Gas Turbine (S-1030)/HRSG (S-1031)] and/or [Gas Turbine (S-1032)/HRSG (S-1033)]
  - (b) On a daily basis, the 365 day rolling average cumulative total POC, PM10, SAM and SO2 mass emissions, for both power trains: Gas Turbine (S-1030)/HRSG (S-1031) and/or Gas Turbine (S-1032)/HRSG (S-1033). [Basis: Offsets, PSD, Cumulative Increase]
- 24. The Owner/Operator shall obtain approval for all source test procedures from the District's Source Test Section prior to conducting any tests. The Owner/Operator shall comply with all applicable testing requirements for continuous emission monitors as specified in Volume V of the District's Manual of Procedures. The owner/operator shall notify the District's Source Test Section in writing of the source test protocols and projected test dates at least 7 days prior to the testing date(s). As indicated above, the Owner/Operator shall measure the contribution of condensable PM (back half) to the total PM10 emissions. However, the Owner/Operator may propose alternative measuring techniques to measure condensable PM such as the use of a dilution tunnel or other appropriate method

used to capture semi-volatile organic compounds. Source test results shall be submitted to the District within 60 days of conducting the tests. [Basis: Offsets, PSD, Cumulative Increase]

- 25. The Owner/Operator shall submit all reports (including, but not limited to monthly CEM reports, monitor breakdown reports, emission excess reports, equipment breakdown reports, calculated compliance records, etc.) as required by District Rules or Regulations or through permit conditions, and in accordance with all procedures and time limits specified in the Rule, Regulation, Manual of Procedures, or Enforcement Division Policies & Procedures Manual. (Basis: Regulation 2-6-502)
- 26. The Owner/Operator shall maintain all records and reports on site for a minimum of 5 years. These records shall include but are not limited to: continuous monitoring records (firing hours, fuel flows, emission rates, monitor excesses, breakdowns, etc.), source test and analytical records, natural gas sulfur content analysis results, emission calculation records, records of plant upsets and related incidents. The length of time, description and quantity of excess emissions associated with breakdowns shall be included in the recordkeeping requirements. The owner/operator shall make all records and reports available to District and the CEC CPM staff upon request. (Basis: Regulation 2-6-501)
- 27. The Owner/Operator shall notify the District of any violations of these permit conditions consistent with the requirements of the Title V permit (Basis: Regulation 2-1-403)
- 28. The Owner/Operator shall have a stack height for emission points P-60 and P-62 each at least 80 feet above grade level at the stack base. (Basis: PSD, TRMP)
- 29. The Owner/Operator shall provide adequate stack sampling ports and platforms to enable the performance of source testing. The location and configuration of the stack sampling ports shall be subject to BAAQMD review and approval. (Basis: Regulation 1-501)
- 30. Within 180 days of the issuance of the Authority to Construct, the Owner/Operator shall contact the BAAQMD Technical Services Division regarding requirements for the continuous monitors, sampling ports, platforms, and source tests required. All source testing and monitoring shall be conducted in accordance with the BAAQMD Manual of Procedures. (Basis: Regulation 1-501)
- 31. For the startup period for the Gas Turbines/HRSGs, the Owner/Operator shall limit the startup period to no more than the period defined in the Startup Mode. [Basis: Cumulative Increase, Toxics]
- 32. Unwarranted. [Basis: Cogeneration plant has been incorporated into the Title V permit. The condition to submit an application for a significant revision of the Title V permit to include the Cogeneration facility is no longer needed.]

- 33. Pursuant to 40 CFR Part 72.30(b)(2)(ii) of the Federal Acid Rain Program, the Owner/Operator of the Valero Power Plant shall not operate Phase II of the cogeneration project until either: 1) a Title IV Operating Permit has been issued; 2) 24 months after a Title IV Operating Permit Application has been submitted, whichever is earlier. (Basis: Regulation 2, Rule 7)
- 34. The Owner/Operator of the Cogeneration project shall comply with the continuous emission monitoring requirements of 40 CFR Part 75. (Basis: Regulation 2, Rule 7)
- 35. The Owner/Operator shall install and operate a District approved continuous refinery fuel gas fuel monitor/recorder to determine the H2S content and total reduced sulfur content of the refinery fuel gas and natural gas prior to operation of the Cogeneration project (S-1030, S-1031, S-1032 and S-1033). This does not include pilot gas. (Basis: Refinery fuel gas and natural gas monitoring for SO2, BACT)
- 36. The Owner/Operator shall record the rolling consecutive 3-hour average totaled reduced sulfur content and H2S content of the refinery fuel gas. On a quarterly basis, the owner shall report:
  - (a) the daily fuel consumption,
  - (b) hourly H2S content (as averaged over 3 consecutive hours) of the refinery fuel gas,
  - (c) hourly total reduced sulfur content (as averaged over 24 consecutive hours),
  - (d) quarterly daily averaged H2S content
  - (e) quarterly daily averaged total reduced sulfur content, and
  - (f) annual averaged reduced sulfur content using the last four quarters.

The report shall be sent to the District's Director of Compliance and Enforcement, and the Manager of the Permit Evaluation Section no later than 60 days after the end of the quarter. [Basis: BACT, Offsets, Cumulative Increase]

- 37. The Owner/Operator shall equip the four sources (S-1030, S-1031, S-1032 and S-1033) with a District approved continuous fuel flow monitor and recorder in order to determine the fuel consumption. [Basis: BACT, Offsets, Cumulative Increase, Monitoring]
- 38. The Owner/Operator shall install, calibrate, maintain and operate a District-approved continuous emission monitor and recorder for NOx, CO and O2. [Basis: BACT, Offsets, Cumulative Increase, Monitoring]
- 39. The Owner/Operator shall conduct a quarterly source test to demonstrate compliance with 19 (f) for POC and 19 (h) for PM10. The Owner/Operator shall conduct the tests in accordance with protocols approved in advance by the District. After acquiring one year of source test data on these units, the District may switch to annual source testing if test variability is low. [Basis: BACT]
- 40. The Owner/Operator shall conduct a quarterly source test to demonstrate compliance with part 20 for Sulfuric Acid Mist (SAM). The testing shall also include testing for SO2, SO3, SAM and ammonium sulfates. The Owner/Operator shall conduct the tests

### **VI. Permit Conditions**

in accordance with protocols approved in advance by the District. After acquiring one year of source test data on these units, the District may switch to annual source testing if test variability is low. [Basis: Cumulative Increase]

- 41. The Owner/Operator shall equip all hydrocarbon control valves installed as part of the Cogeneration Project in Phase I and Phase II with live loaded packing systems and polished stems, or equivalent. (Basis: Cumulative Increase Offsets)
- 42. Deleted. [Basis: Inspection of hydrocarbon valves covered by Regulation 8, Rule 18.]
- 43. The Owner/Operator shall equip all connectors installed in the piping systems as a result of Phase I or Phase II of the Cogeneration project with graphitic-based gaskets unless the service requirements prevent this material. Any connector found to be leaking in excess of 100 ppm shall be subject to the leak repair provisions of Regulation 8, Rule 18. (Basis: RACT, offsets, Cumulative Increase)
- 44. The Owner/Operator shall equip all new hydrocarbon centrifugal compressors installed as part of Phase I or Phase II of the Cogeneration project with "wet" dual mechanical seals with a heavy liquid barrier fluid, or dual dry gas mechanical seals buffered with inert gas. All compressors shall be inspected and repaired in accordance with District Regulation 8, Rule 18. All compressors found to leaking in excess of 500 ppm shall be subject to the leak repair provisions of Regulation 8, Rule 18. (Basis: RACT, Offsets, Cumulative Increase)
- 45. Deleted. (Basis: New fugitive equipment in organic service has been integrated into the owner's fugitive equipment monitoring and repair program and meets the requirements of District Regulation 8-18.)
- 46. The Owner/Operator of the Cogeneration project consisting of S-1030, S-1031, S-1032, S-1033 shall include the following gas fittings: no more than 600 valves, 1800 connectors and 4 compressors The annual mass limit for POC (Part number 22) and the offsets required may be adjusted based on final fugitive component count. Any additional POC offsets required due to a larger fugitive component count will need to be provided prior to permit issuance. [Basis: Cumulative Increase, Offsets]
- 47. Deleted. (Basis: The S-38 and S-39 steam boilers have been completely shutdown.)
- 48. The Owner/Operator shall completely shutdown the S-41 steam boiler no later than 90 days after startup of the S-1032 and S-1033 power train. The Owner/Operator shall enter into the record log the date the boiler was shutdown. (Basis: offsets)

### Temporary Condition for Phase I: Expires after the first 36 hours of Commissioning

49. Deleted. (Basis: Phase I commissioning period has ended.)

### VI. Permit Conditions

Condition 19329 (Alternative Compliance Plan) For S-7, S-20, S-21, S-22, S-23, S-24, S-25, S-26, S-30 through S-33, S-34, S-35, S-40, S-41, S-173 and S-220

1. The affected sources making up this Alternative Compliance Plan shall not exceed the following maximum hourly firing rates: (Basis: Regulation <u>2-9-303.4.1</u>, Cumulative Increase)

Valero Refining Company (Plant # B2626)

S-7 Pipestill Hydrofiner Furnace: F-103, 53 MMBtu/Hr

S-20 Naphtha Hydrofiner Furnace: F-104, 62 MMBtu/Hr

S-21 Hydrogen Reforming Furnace: F-301, 614 MMBtu/Hr

S-22 Hydrogen Reforming Furnace: F-351, 614 MMBtu/Hr

S-23 HCU Recycle Gas Furnace: F-401, 200 MMBtu/Hr

S-24 Cat Feed Hydrofiner Treat Gas Furnace: F-601, 33 MMBtu/Hr

S-25 Fluid Catalytic Cracker Unit: F-701, 230 MMBtu/Hr

S-26 Cat Naphtha Hydrofiner Furnace: F-801, 33 MMBtu/Hr

S-30- S-S33 Power former Furnace: F-2901 thru 2904, 463 MMBtu/Hr

S-34 Powerformer Regenerator Furnace: F-2905, 74 MMBtu/Hr

S-35 Powerformer Reactivation Furnace: F-2906, 14 MMBtu/Hr

S-40 Utility Package Boiler: SG-2301, 218 MMBtu/Hr

S-41 Utility Package Boiler: SG-2301, 218 MMBtu/Hr

S-173 Coker Steam Superheat Furnace: F-902, 20 MMBtu/Hr

S-220 MRU Hot Oil Furnace: F-4460, 351 MMBtu/Hr

Valero Asphalt Plant (Plant # <u>B</u>3193)

S-19 Vacuum Heater: H-1, 40 MMBtu/Hr (from 33 MMBtu/Hr 4/03, AN 7023)

S-20 <u>Steam Boiler</u>: H-2A, 15 MMBtu/Hr S-21 Steam Boiler: H-2B, 15 MMBtu/Hr

- 2. The applicant shall submit quarterly reports and an annual report (July 1 to June 30) of their ACP activity no later than 30 days after the close of the specified period. (Basis: Regulation 2-9-303.3)
- 3. The applicant shall submit all necessary documents to the District to review and approve (or deny) the Alternative Compliance Plan. These documents in support of continuing the ACP shall be submitted no later than 30 days after the close of the calendar year. (Basis: Regulation 2-9-303.3)
- 4. The applicant shall maintain all records required in condition Parts #2 and #3 for a period of at least 5 years from the date of such record. These records shall be made available to District staff upon request. (Basis: Record keeping Regulation2-9-303.3)

Condition 19466

- 1. The Owner/Operator shall conduct an annual District approved source test on the S-1 and S-2 Claus Units to demonstrate that 95% of the H2S in the refinery fuel gas is removed and recovered on a refinery-wide basis and 95% of the H2S in the process water streams is removed and recovered on a refinery-wide basis AND 95% of the ammonia in the process water stream is removed. The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. The test shall include sampling of the inlet and outlet of the fuel gas scrubber and sour water stripper towers. [Basis: Regulation 9-1-313.2]Deleted. (Basis: Sampling is a safety problem and there is reasonable assurance that compliance with Regulation 9-1-313.2 is achieved. See detailed analysis in Statement of Basis)
- 2a. Deleted. (Basis: S-188 vents to the refinery fuel gas system).
- 2b. Deleted. (Basis: S-189 vents to the refinery fuel gas system).
- 2c. The Owner/Operator shall conduct an annual District-approved source test on the S-160, Seal Oil Sparger, to demonstrate compliance with Regulation 8-2-301. The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 2-6-503]
- 3. The Owner/Operator shall monitor and record on a monthly basis the visible emissions from Sources S-1, S-2, S-8, S-10, S-11, S-12, S-160, S-176, S-233 and S-237 to demonstrate compliance with Regulation 6-301 (Ringlemann 1 or 20% opacity). For S-10 and S-12 only, this monitoring is required only when these sources are returned to service. For S-176 only, this monitoring is only required when dry salt is added to the tank. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-301]
- 4. The owner/operator shall notify the District in writing by fax or email no less than three calendar days in advance of any scheduled startup or shutdown of any process unit and as soon as feasible for any unscheduled startup or shutdown of a process unit, but no later than 48 hours or within the next normal business day after the unscheduled startup/shutdown. The notification shall be sent in writing by fax or email to the Director of Enforcement and Compliance. The requirement is not federally enforceable. [Regulation 2-1-403]
  - 5. The Owner/Operator shall abate the emissions from the S-3 and S-4, CO Boilers, by at

least four of the five A-1 through A-5 Electrostatic Precipitators and the Owner/Operator shall exhaust those emissions through the main stack (P-1). [Basis: Regulation 6-301 and Regulation 6-304].

- 6. The Owner/Operator shall perform an annual source test on Sources S-5 and S-6 to demonstrate compliance with Regulation 6-310 (outlet grain loading no greater than 0.15 grain/dscf). The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-310]
- 7. The Owner/Operator shall perform an annual source test on Sources S-8, S-10, S-11, S-12, S-160, S-176 and S-233 to demonstrate compliance with Regulation 6-310 (outlet grain loading no greater than 0.15 grain/dscf). For S-11, S-160 and S-233 only, the Owner/Operator shall submit a source test plan and procedure to the Manager of Source Test for approval by April 1, 2004. The first source test shall commence for S-11, S-160 and S-233 no more than one year from the date of the S-11, S-160 and S-233 source test plan and procedure is approved. The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. For S-10 and S-12 only, this annual source test is required only when these sources are returned to service. For S-176 only, this source test is only required when dry salt is added to the tank. [Basis: Regulation 6-310]
- 8. The Owner/Operator shall perform annually a source test on S-1 and S-2 to determine compliance with Regulation 6-330 (Outlet grain loading not to exceed 0.08 grain/dscf of SO3 and H2SO4). The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-330]
- 9. The Owner/Operator shall perform an annual source test on Sources S-5 and S-6 to demonstrate compliance with Regulation 6-311 (PM mass emissions rate not to exceed 4.10P<sup>0.67</sup> lb/hr). The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 6-311]
- 10. The Owner/Operator shall conduct a District-approved source test on a semi-annual basis on

Sources S-7, S-20, S-21, S-22, S-23, S-24, S-25, S-26, S-30, S-31, S-32, S-33, S-34, S-40, S-41 and S-220 and on an annual basis on sources S-35 and S-173 to demonstrate compliance with Regulation 9-10-305 (CO not to exceed 400 ppmv, dry, at 3% O2, operating day average). The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 9-10-305]

- 11. The Owner/Operator shall conduct a semi-annual District-approved source test on Sources S-43, S-44 and S-46 to demonstrate compliance with Regulation 9-9-301.1 (NOx not to exceed 55 ppmv, dry, at 15% O2, fired on refinery fuel gas). The Owner/Operator shall submit the test results to the District's Compliance and Enforcement Division and the District's Permit Services Division no less than 45 days after the test. These records shall be kept for a period of at least 5 years from date of entry and shall be made available to District staff upon request. [Basis: Regulation 9-9-301.1]
- 12. The Owner/Operator shall abate the VOC emissions from the S-159 Lube Oil Reservoir using the S-36 Boiler. [Basis: Cumulative Increase]
- 13. The Owner/Operator shall vent the VOC emissions from S-167 and S-168 Seal Oil Spargers in a closed system to the flare gas recovery header to be returned to the refinery fuel gas system. [Basis: Cumulative Increase]
- 14. The Owner/Operator shall use the continuous emission monitors required by Regulation 9, Rule 10, to monitor compliance for all NOx limits at the following sources:

CO Furnaces: S-3, S-4

Process Furnaces: S-21, S-22, S-23, S-25, S-30, S-31, S-32, S-33, S-220

Steam Generators: S-40, S-41

15. The Owner/Operator shall use the continuous opacity monitors required by Regulation 1-520 to monitor compliance for the opacity limits at the Main Stack for the following sources:

S-5 Fluid Catalytic Cracking Unit, Catalyst Regenerator

S-6 Fluid Coker, Burner

16. To allow sufficient time to prepare test plans, train employees, and install any necessary equipment, the monitoring requirements Parts 1, 2c, 3, 6, 7, 8, 9, 10, 11, 14 and 15 are effective April 1, 2004.

Condition #20620: For Refinery:

- 1. By October 11, 2004, the owner/operator shall submit a complete application for a significant revision to the Major Facility Review permit to incorporate the limits, compliance options, and monitoring requirements in 40 CFR 63, Subpart UUU, National Emission Standards for Hazardous Air Pollutants for Petroleum Refineries: Catalytic Cracking Units, Catalytic Reforming Units, and Sulfur Recovery Units. (basis: 40 CFR 63, Subpart UUU)
- 2. By April 11, 2005, the owner/operator shall submit an operation, maintenance and monitoring plan for District review in accordance with 40 CFR 63.1574(f). The plan shall be submitted to the Director of Enforcement. (basis: 40 CFR 63.1574(f))

Condition 20762 For Refinery:

This condition applies to tanks that are exempt from Regulation 8, Rule 5, Storage of Organic Liquids, due to the exemption in Regulation 8-5-117 for storage of organic liquids with a true vapor pressure of less than or equal to 25.8 mm Hg (0.5 psia).

- 1. Whenever the type of organic liquid in the tank is changed, the owner/operator shall verify that the true vapor pressure at the storage temperature is less than or equal to 25.8 mm Hg (0.5 psia). The owner/operator shall use Lab Method 28 from Volume III of the District's Manual of Procedures, Determination of the Vapor Pressure of Organic Liquids from Storage Tanks. For materials listed in Table 1 of Regulation 8 Rule 5, the owner/operator may use Table 1 to determine vapor pressure, rather than Lab Method 28. If the results are above 25.8 mm Hg (0.5 psia), the owner/operator shall report non-compliance in accordance with Standard Condition I.F and shall submit an application to the District for a new permit to operate for the tank as quickly as possible. (Basis: Regulation 8-5-117)
- 2. The results of the testing shall be maintained in a District-approved log for at least five years from the date of the record, and shall be made available to District staff upon request. (Basis: 8-5-117)

Condition # 20806	
-------------------	--

For S-16, S-18, S-19 Flares (ST-2101AG, ST-2101, ST-2103)

1. The Owner/Operator shall not flare more than the following pounds per hour of vent gas as defined in Regulation 12-11-210 in

S-16 Acid Gas Flare 79,000 lb/hr S-18 South Flare 1,200,000 lb/hr S-19 North Flare 886,000 lb/hr

(Basis: Regulation 8-1-110.3; 2-1-403)

2. In order to demonstrate compliance with Part 1 of this condition, the Owner/Operator shall record on an hourly basis the pounds of vent gas flared at S-16, S-18, S-19 Flares. The Owner/Operator shall maintain these records for a period of five years from the date of entry and make sure records are available for the APCO upon request. (Basis: Regulation 8-1-110.3; 2-6-409.2; 2-6-501)

- 3. For the purposes of these conditions, a flaring event is defined as a flow rate of vent gas flared in any consecutive 15 minutes period that continuously exceeds 330 standard cubic feet per minute (scfm). If during a flaring event, the vent gas flow rate drops below 330 scfm and then increases above 330 scfm within 30 minutes, that shall still be considered a single flaring event, rather than two separate events. For each flaring event during daylight hours (between sunrise and sunset), the Owner/Operator shall inspect the flare within 15 minutes of determining the flaring event, and within 30 minutes of the last inspection thereafter, using video monitoring or visible inspection following the procedure described in Part 4 of this condition. (basis: Regulation 2-6-409.2)
- 4. The Owner/Operator shall use the following procedure for the initial inspection and each 30-minute inspection of a flaring event.
  - a. If the Owner/Operator can determine that there are no visible emissions using video monitoring, then no further monitoring is necessary for that particular inspection.
  - b. If the Owner/Operator cannot determine that there are no visible emissions using video monitoring, the Owner/Operator shall conduct a visual inspection outdoors using either:
    - i. EPA Reference Method 9; or
    - ii. Survey the flare by selecting a position that enables a clear view of the flare at least 15 feet, but not more than 0.25 miles, from the emission source, where the sun is not directly in the observer's eyes.
  - c. If a visible emission is observed, the Owner/Operator shall continue to monitor the flare for at least 3 minutes, or until there are no visible emissions, whichever is shorter.
  - d. The Owner/Operator shall repeat the inspection procedure for the duration of the flaring event, or until a violation is documented in accordance with Part 5. After a violation is documented, no further inspections are required until the beginning of a new calendar day.

(Basis: Regulation 6-301, 2-1-403)

### **VI. Permit Conditions**

- 5. The Owner/Operator shall comply with one of the following requirements if visual inspection is used:
  - a. If EPA Method 9 is used, the Owner/Operator shall comply with Regulation 6-301 when operating the flare.
  - b. If the procedure of 4.b.ii is used, the Owner/Operator shall not operate a flare that has visible emissions for three consecutive minutes.

(Basis: Regulation 2-6-403)

- 6. The Owner/Operator shall keep records of all flaring events, as defined in Part 3. The Owner/Operator shall include in the records the name of the person performing the visible emissions check, whether video monitoring or visual inspection (EPA Method 9 or visual inspection procedure of Part 4 of this condition) was used, the results of each inspection, and whether any violation of this condition (using visual inspection procedure in Part 4 of this condition) or Regulation 6-301 occurred (using EPA Method 9). (Basis: Regulation 2-6-501; 2-6-409.2)
- 7. The Owner/Operator shall operate S-19 Flare to burn only process upset gases as defined by 60.101(e) or fuel gas as defined by 60.101(d) that is released to it as a result of relief valve leakage or other emergency malfunctions. (Basis: 60.104(a)(1); Regulation 2-1-403)
- 8. To allow sufficient time to prepare monitoring plans, train employees, and install any necessary equipment, Parts 1 through 7 of this Condition are effective January 1, 2005.

#### Condition 21233

Valero Refining Company – California 3400 E. Second Street Benicia, Ca 94510 Application 8028 Plant B2626 and A0901 Regulation 9-10 Refinery-Wide Compliance Effective January 1, 2005 (unless stated otherwise)

\*1. The following sources are subject to the refinery-wide NOx emission rate and CO concentration limits in Regulation 9-10: (Basis: Regulation 9-10-301 & 305)

Facility No. B2626, Valero Refining Company

<u>S#</u>	<u>Description</u>	NOX CEN
7	F-103 Jet Fuel HF, 53 MMBtu/hr	No
20	F-104 Naphtha HF, 62 MMBtu/hr	No

21	F-301 Hydrogen, 614 MMBtu/hr	Yes
22	F-351 Hydrogen, 614 MMBtu/hr	Yes
23	F-401 Gas Oil HC, 200 MMBtu/hr	Yes
24	F-601 Cat Feed HF, 33 MMBtu/hr	No
25	F-701 Cat Feed, 230 MMBtu/hr	Yes
26	F-801 HCN HF, 33 MMBtu/hr	No
30	F-2901 PFR Preheat, 463 MMBtu/hr total	Yes
31	F-2902 PFR Preheat, 463 MMBtu/hr total	Yes
32	F-2903 PFR Preheat, 463 MMBtu/hr total	Yes
33	F-2904 PFR Preheat, 463 MMBtu/hr total	Yes
34	F-2905 PFR Regen Gas, 74 MMBtu/hr	No
35	F-2906 PFR React Gas, 14 MMBtu/hr	No
40	SG-2301 Steam Gen, 218 MMBtu/hr	Yes
41	SG-2302 Steam Gen, 218 MMBtu/hr	Yes
173	F-902 Coker Steam Superheat, 20 MMBtu/hr	No
220	F-4460 MRU Hot Oil, 351 MMBtu/hr	Yes

Facility No. A0901 (13193), Valero Benicia Asphalt Plant

<u>S#</u>	<u>Description</u>	NOx CEM-(Y/N)
19	Vacuum Heater, 40 MMBtu/hr	No
20	Steam Boiler, 14.7 MMBtu/hr	No
21	Steam Boiler H-2B, 14.7 MMBtu/hr	No

- A. Compliance with the daily refinery wide average NOx emission limit, 0.033 lb NOx/MMBtu fired duty is achieved through the use of an approved Alternate Compliance Plan using NOx IERCs in accordance with the provisions in Regulation 2-9-303.
- B. The owner/operator of each source listed in Part 1 above shall determine compliance with Regulation 9-10 as follows:
  - 1) Calculate NOx emissions from each furnace using measured fuel gas rates, and either:
    - a. CEM data or
    - b. NOx emission factors from Part 5A
  - 2) The daily refinery facility wide average emission rate shall be determined by dividing the combined total emissions from sources listed in Part 1 above and those sources listed in the Valero Benicia Asphalt Plant (Plant # A0901)
    Regulation 9-10 permit conditions by the combined total heat input.
  - 3) Sufficient NOx IERC's will be provided in accordance with the provisions of

Regulation 2-9-303 to ensure compliance with the refinery wide average NOx emission limit of 0.033 lb NOx/MMBtu fired duty.

- \*2. The Owner/Operator of each source with a maximum firing rate greater than 25 MMBtu/hr listed in Part 1 shall properly install, properly maintain, and properly operate an O2 monitor and recorder. (Basis: Regulation 9-10-502)
- \*3. The Owner/Operator shall operate each source listed in Part 1, which does not have a NOx CEM, within specified ranges of operating conditions (firing rate and oxygen content) as detailed in Part 5. The ranges shall be established by utilizing data from District-approved source tests. (Basis: Regulation 9-10-502)
- A. The NOx Box for units with a maximum firing rate of 25 MMBtu/hr or more shall be established using the procedures in Part 4.
- B. The NOx Box for units with a maximum firing rate less than 25MMBtu/hr shall be established as follows: High-fire shall be the maximum rated capacity. Low-fire shall be 20% of the maximum rated capacity (except for S-35, for which the low-fire shall be 8% of the maximum rated capacity). There shall be no maximum or minimum O2.
- \*4. The Owner/Operator shall establish the initial NOx box for each source subject to Part 3 by December January 1, 20054. The NOx Box may consist of two operating ranges in order to allow for operating flexibility and to encourage emission minimization during standard operation. (Basis: Regulation 9-10-502) The procedure for establishing the NOx box is
- A. Conduct District approved source tests for NOx and CO, while varying the oxygen concentration and firing rate over the desired operating ranges for the furnace;
- B. Determine the minimum and maximum oxygen concentrations and firing rates for the desired operating ranges (Note that the minimum  $O_2$  at low-fire may be different than the minimum  $O_2$  at high-fire. The same is true for the maximum  $O_2$ ). The Owner/Operator shall also verify the accuracy of the O2 monitor on an annual basis.
- C. Determine the highest NOx emission factor (lb/MMBtu) over the preferred operating ranges while maintaining CO concentration below 200 ppm; the Owner/Operator may choose to use a higher NOx emission factor than tested.

- D. Plot the points representing the desired operating ranges on a graph. The resulting polygon(s) are the NOx Box, which represents the allowable operating range(s) for the furnace under which the NOx emission factor from part 5a is deemed to be valid.
  - 1). The NOx Box can represent/utilize either one or two emission factors.
  - 2) The NOx Box for each emission factor can be represented either as a 4- or 5-sided polygon The NOx box is the area within the 4- or 5-sided polygon formed by connecting the source test parameters that lie about the perimeter of successful approved source tests. The source test parameters forming the corners of the NOx box are listed in Part 5.
  - E. Upon establishment of each NOx Box, the Owner/Operator shall prepare a graphical representation of the box. The representation shall be made available on-site for APCO review upon request. The box shall also be submitted to the BAAQMD with permit amendments.
- \*5. Except as provided in part 5B & C, the Owner/Operator shall operate each source within the NOx Box ranges listed below at all times of operation. This part shall not apply to any source that has a properly operated and properly installed NOx CEM. (Basis: Regulation 9-10-502)
  - A. NOx Box ranges. The limits listed below are based on a calendar day averaging period for both firing rate and O2%.

Source No.	Emission Factor (lb/MMBtu)	Min O <sub>2</sub> at Low Firing (O2%, MMBtu/hr)	Max O <sub>2</sub> at Low Firing (O2%, MMBtu/hr)	Min O <sub>2</sub> at High Firing (O2%, MMBtu/hr)	Mid O <sub>2</sub> at Mid/High Firing (polygon) (O2%, MMBtu/hr)	Max O <sub>2</sub> at High Firing (O2%, MMBtu/hr)

S-21	TBD	(Note 1), 2.9	(Note 1), 2.9	(Note 1), 14.7	N/A	(Note 1), 14.7

Note 1: Per Part 3B, Oxygen limits do not apply to sources with maximum firing rates less than 25

MMBtu/hr.

- B. Part 5A does not apply to low firing rate conditions (i.e., firing rate less than or equal to 20% of the unit's rated capacity), during startup or shutdown periods, or periods of curtailed operation (ex. during heater idling, refractory dry out, etc.) lasting 5 days or less. During these conditions the means for determining compliance with the refinery wide limit shall be accomplished using the method described in 9-10-301.2 (i.e. units out of service & 30-day averaging data).
- C. Part 5A does not apply during any source test required or permitted by this condition. See Part 7 for the consequences of source test results that exceed the emission factors in Part 5.
  - \*6. NOx Box Deviations (Basis: Regulation 9-10-502).
- A. The Owner/Operator may deviate from the NOx Box (either the firing rate or oxygen limit) provided that the Owner/Operator conducts a District approved source test that reasonably represents the past operation outside of the established ranges. The source test representing the new conditions shall be conducted no later than the next regularly scheduled source test period, or within eight months, whichever is sooner. The source test results will establish whether the source was operating outside of the emission factor utilized for the source. The source test results shall be submitted to the District Source Test Manager within 45 days of the test. The Owner/Operator may request, and the APCO may grant, an extension of 15 days for submittal of results. As necessary, a permit amendment shall be submitted.

#### 1) Source Test ≤ Emission Factor

If the results of this source test do not exceed the higher NOx emission factor in Part 5, or the CO limit in Part 9, the unit will not be considered to be in violation during this period for operating out of the "box."

The facility may submit an accelerated permit program permit application to request an administrative change of the permit condition to adjust the NOx Box operating range(s), based on the new test data.

# VI. Permit Conditions

2) Source Test > Emission Factor

If the results of this source test exceed the permitted emission concentrations or emission rates then the actions described below must be followed:

- a. Utilizing the measured emission concentration or rate, the Owner/Operator shall perform an assessment of compliance with Regulation 9-10-301 as follows:
  - 1. "Out of Box" Condition for the day(s) in which the "out of box" condition(s) occurred, the Owner/Operator shall ensure sufficient NOx IERCs are provided to ensure the facility is in compliance with the refinery wide limit. The Owner/Operator will be in violation of Regulation 9-10-301 for each day there are insufficient NOx IERCs provided to bring the refinery wide average into compliance with Regulation 9-10-301.
  - 2. Within the Box for the case when the source is operated within the "box" but source test results indicate a higher emission factor, the Owner/Operator shall apply the higher emission factor retroactively to the date of the previous source test and provide sufficient NOx IERCs for that time period to ensure the facility is in compliance with the refinery wide limit specified in Regulation 9-10-301. The Owner/Operator will be in violation of Regulation 9-10-301 for each day there are insufficient NOx IERCs provided to bring the refinery wide average into compliance with Regulation 9-10-301.
- b. The facility may submit a permit application to request an alteration of the permit condition to change the NOx emission factor and/or adjust the operating range, based on the new test data.
- B. Reporting. The Owner/Operator must report conditions outside of box within 96 hours of occurrence.

<sup>\*7.</sup> For each source subject to Part 3, the Owner/Operator shall conduct source tests on the schedule listed below. The source tests are performed in order to measure NOx, CO, and O2 at the as-found firing rate, or at conditions reasonably specified by the APCO.

### VI. Permit Conditions

The source test results shall be submitted to the District Source Test Manager within 45 days of the test. The Owner/Operator may request, and the APCO may grant, an extension of 15 days for submittal of results. (Basis: Regulation 9-10-502)

## A. Source Testing Schedule

1) Heater < 25 MMBtu/hr

One source test per consecutive 12 month period. The time interval between source tests shall not exceed 16 months. The source test results shall be submitted to the District Source Test Manager within 45 days of the test.

2) Heaters  $\geq$  25 MMBtu/hr

Two source tests per consecutive 12 month period. The time interval between source tests shall not exceed 8 months and not be less than 5 months apart. The source test results shall be submitted to the District Source Test Manager within 45 days of the test.

3) If a source has been shutdown longer than the period allowed between source testing periods (e.g. <25 MMBtu/hr -> 162 mos or > 25 MMBtu/hr -> 8 mos), the owner/operator shall conduct the required semi-annual source test within 30 days of start up of the source.

#### B. Source Test Results > NOx Box Emission Factor

If the results of any source test under this part exceed the permitted concentrations or emission rates the Owner/Operator shall follow the requirements of Part 6A2). If the Owner/Operator chooses not to submit an application to revise the emission factor, the Owner/Operator shall conduct another Part 7 source test, at the same conditions, within 90 days of the initial test.

\*8. For each source listed in Part 1 with a NOx CEM installed **that does not have a CO CEM installed pursuant to Part 9**, the Owner/Operator shall conduct semi-annual District approved CO source tests at as-found conditions. The time interval between source tests shall not exceed 8 months. District conducted CO emission tests associated with District-conducted NOx CEM field accuracy tests may be substituted for the CO semi-annual source tests. (Basis: Regulation 9-10-502)

#### VI. Permit Conditions

\*9. For any source listed in Part 1 with a maximum firing limit greater than 25 MMBtu/hr for which any two source test results over any consecutive five year period are greater than or equal to 200 ppmv CO at 3% O2, the Owner/Operator shall properly install, properly maintain, and properly operate a CEM to continuously measure CO and O2. The Owner/Operator shall install the CEM within the time period allowed in the District's Manual of Procedures. (Basis: Regulation 9-10-502, 1-522)

\*10.In addition to records required by Regulation 9-10-504, the Owner/Operator must maintain records of all source tests conducted to demonstrate compliance with Parts 1 and 5. These records shall be kept on site for at least five years from the date of entry in a District approved log and be made available to District staff upon request. (Basis: Regulation 9-10-504)

#### **COND# 22156**

Valero Refining Company 3400 E. Second Street Benicia, CA 94510 Electrostatic Precipitators (ESP) A-1, A-2, A-3, A-4 and A-5

- 1. The owner/operator of Electrostatic Precipitators (ESP) A-1, A-2, A-3, A-4 and A-5 that abate CO Boilers S-3 and S-4 shall conduct continuous monitoring of ESP operating parameters for reasonable assurance of compliance with Regulations 6-310. The owner/operator shall commence continuous monitoring and recording of the operating parameters no later than the ESP monitoring commencement date required under 40 CFR Part 63, Subpart UUU. (Basis: Regulation 2-6-503)
- 2. The owner/operator shall conduct an initial compliance demonstration to establish a correlation between selected parameters and particulate mass emission by the deadline set forth in 40 CFR Part 63, Subpart UUU. The owner/operator shall submit the results to the District for its approval. (Basis: Regulation 2-6-503)
- 3. The owner/operator shall establish a range of compliance of the parametric value based on the results of the initial compliance demonstration. (Basis: Regulation 2-6-503)
- 4. Each time the measured parametric value exceeds the established range of compliance (pursuant to the initial compliance demonstration), the owner/operator shall conduct a source test to determine compliance with Regulations 6-310. The owner/operator shall conduct the source test within 45 days of detection of the

Facility Name: Valero Refining Co.-CA Permit for Facility #: B2626

#### VI. Permit Conditions

exceedence. (Basis: Regulation 2-6-503)

5. Exceedences of parametric compliance range are deviations and shall be reported as deviations in all Title V reports. (Basis: Regulation 2-6-503)

#### Condition #76003

For Source S-108 Pressurized Tank (TK-1801)

1. The Owner/Operator shall limit the rate of filling the tank to a value such that organic emissions are under 4 lb/hr [Basis: Cumulative Increase]

### VII. APPLICABLE LIMITS & COMPLIANCE MONITORING REQUIREMENTS

This section has been included to summarize the applicable emission limits contained in Section IV, Source-Specific Applicable Requirements, of this permit. The following tables show the relationship between each emission limit and the associated compliance monitoring provisions, if any. The monitoring frequency column indicates whether periodic or continuous (C) monitoring is required. For periodic monitoring, the frequency of the monitoring has also been shown, using the following codes: annual (A), semi-annual (SA), quarterly (Q), monthly (M), weekly (W), daily (D), hourly (H), or on an event basis (E). No monitoring (N) has been required if the current applicable rule or regulation does not require monitoring, and the operation is unlikely to deviate from the applicable emission limit based upon the nature of the operation.

#### Footnotes to Table VII-I

<sup>&</sup>lt;sup>a</sup> Valves are inspected pursuant to BAAQMD-approved Alternative Inspection Schedule that satisfies the requirements of BAAQMD Regulation 8-18-404. Valves that have not been found to be leaking for the five prior quarters are placed on the annual inspection schedule.

<sup>&</sup>lt;sup>b</sup> Connectors are inspected pursuant to a BAAQMD-approved Connector Inspection Program that satisfies the requirements of BAAQMD Regulation 8-18-401.6. Under this program, 20% of all of the refinery's connectors are inspected each year.

c 40 CFR 60.483-2 (Subpart VV) and BAAQMD Regulation 11-7-313 alternative screening schedules for valves are analogous to the Valero Alternative Inspection Schedule (see footnote "a") with two exceptions: 40 CFR 60.483-2 uses a leak definition of 10,000 ppm VOC rather than 100 ppm TOC, and 40 CFR 60.483-2 requires that the percentage of valves leaking facility-wide (at 10,000 ppm) must have been less than 2% for the five-quarter time period. For process units covered by refinery MACT, 40 CFR 63.648(a)(2) allow the percentage leaking to be determined on a refinery-wide basis. This applies to all process units except NSPS process units except Dimersol, which is not subject to MACT. Finally, any valve subject to Subpart VV or to BAAQMD Regulation 11-7 must *individually* comply with BAAQMD Regulation 8-18-404 (5 quarters with no leaks at 100 ppm) in order to be allowed to be screened less frequently than quarterly. As a practical matter, Subpart VV and BAAQMD Regulation 11-7 are effectively less stringent than the Valero Alternative Inspection Schedule.

#### VII. Applicable Limits and Compliance Monitoring Requirements

#### VIII. TEST METHODS

The test methods associated with the emission limit of a District regulation are generally referenced in Section 600 et seq. of the regulation. The following table indicates only the test methods associated with the emission limits referenced in Section VII, Applicable Emission Limits & Compliance Monitoring Requirements, of this permit.

Table VIII Test Methods

Applicable		
Requirement	Description of Requirement	Acceptable Test Methods
BAAQMD	Continuous Emission Monitoring	Manual of Procedures, Volume V
Regulation		
1-522		
BAAQMD	Laboratory, Source Test and Air	Manual of Procedures
Regulation	Monitoring Procedures	
1-605		
BAAQMD	Ringelmann No. 1 Limitation	Manual of Procedures, Volume I, Evaluation of Visible
Regulation		Emissions
6-301		
BAAQMD	Opacity Limit	Manual of Procedures, Volume V, Continuous Emission
Regulation		Monitoring
6-302		
BAAQMD	Ringelmann No. 2 Limitation	Manual of Procedures, Volume I, Evaluation of Visible
Regulation		Emissions
6-303		
BAAQMD	Tube Cleaning	Manual of Procedures, Volume I, Evaluation of Visible
Regulation		Emissions
6-304		
BAAQMD	Particulate Weight Limitation	Manual of Procedures, Volume IV, ST-15, Particulate Sampling
Regulation		
6-310		
BAAQMD	General Operations	Manual of Procedures, Volume IV, ST-15, Particulates Sampling
Regulation		
6-311		
BAAQMD	Sulfur Recovery Units	Manual of Procedures, Volume IV, ST-20, Sulfur Dioxide,
Regulation		Sulfur Trioxide and Sulfuric Acid Mist
6-330		

Applicable		
Requirement	Description of Requirement	Acceptable Test Methods
BAAQMD	VOC Emission Limit for	Manual of Procedures, Volume, IV, ST-7, Non-Methane Organic
Regulation	Miscellaneous Operations	Carbon Sampling, or EPA method 25 or 25A

#### IX. PERMIT SHIELD

#### A. Non-applicable Requirements

Pursuant to District Regulations 2-6-233 and 2-6-409.12, the federally enforceable regulations and/or standards cited in the following table[s] do not apply to the source or group of sources identified at the top of the table[s]. Enforcement actions and litigation may not be initiated against the source or group of sources covered by this shield based on the regulatory and/or statutory provisions cited, as long as the reasons listed below remain valid for the source or group of sources covered by this shield.

### Table IX A-1 Permit Shield for Non-Applicable Benicia - Benicia Refinery

40 CFR 60 Subpart GGG	Standards of Performance For Equipment Leaks Of VOC In Petroleum Refineries	Per 63.640 (p), equipment leaks that are also subject to Part 6 (NSPS) and Part 61 (NESHAPS) are only required to comply Part 63 (MACT).	

#### **B.** Subsumed Requirements

Pursuant to District Regulations 2-6-233.2 and 2-6-409.12, as of the date this permit is issued, the federally enforceable monitoring, recordkeeping, and reporting requirements

cited in the following table for the source or group of sources identified at the top of the table[s] are subsumed by the monitoring, recordkeeping, and reporting for more stringent requirements or by a "hybrid" monitoring scheme. The District has determined that compliance with the requirements listed below and elsewhere in this permit will assure compliance with the substantive requirements of the subsumed monitoring requirements. Enforcement actions and litigation may not be initiated against the source or group of sources covered by this shield based on the subsumed monitoring requirements cited.

# X. REVISION HISTORY

Initial Major Facility Review Permit Issuance (Application No. 3281):

December 1, 2003

Administrative Amendment (no application):

May 27, 2004

Reopening (Application No. 9298): "Revision 1"

December 16, 2004

Minor Revision (through Application No. 2488)

December 16, 2004

Reopening (Application No. 11697): "Revision 2"

**TBD** 

# XI. GLOSSARY

# **ACT**

Federal Clean Air Act

# **APCO**

Air Pollution Control Officer

#### API

American Petroleum Institute

#### ARB

Air Resources Board

# **BAAQMD**

Bay Area Air Quality Management District

#### **BACT**

Best Available Control Technology

## **BARCT**

Best Available Retrofit Control Technology

# **Basis**

The underlying authority that allows the District to impose requirements.

# **C5**

An Organic chemical compound with five carbon atoms

#### **C6**

An Organic chemical compound with six carbon atoms

## CAA

The federal Clean Air Act

# **CAAQS**

California Ambient Air Quality Standards

# **CAPCOA**

California Air Pollution Control Officers Association

## **CEC**

California Energy Commission

#### **CEM**

A "continuous emission monitor" is a monitoring device that provides a continuous direct measurement of some pollutant (e.g. NOx concentration) in an exhaust stream.

# XI. Glossary

# **CEQA**

California Environmental Quality Act

#### **CFP**

Clean Fuels Project

#### **CFR**

The Code of Federal Regulations. 40 CFR contains the implementing regulations for federal environmental statutes such as the Clean Air Act. Parts 50-99 of 40 CFR contain the requirements for air pollution programs.

#### CO

Carbon Monoxide

#### CO<sub>2</sub>

Carbon Dioxide

#### **COM**

Continuous Opacity Monitor

#### **Cumulative Increase**

The sum of permitted emissions from each new or modified source since a specified date pursuant to BAAQMD Rule 2-1-403, Permit Conditions (as amended by the District Board on 7/17/91) and SIP Rule 2-1-403, Permit Conditions (as approved by EPA on 6/23/95). Used to determine whether threshold-based requirements are triggered.

## **DAF**

A "dissolved air flotation" unit is a process vessel where air bubbles injected at the bottom of the vessel are used to carry solids in the liquid into a froth on the liquid surface, where it is removed.

#### **DNF**

Dissolved Nitrogen Flotation (See DAF)

#### dscf

Dry Standard Cubic Feet

#### dscm

Dry Standard Cubic Meter

# **DWT**

Dead Weight Ton

# XI. Glossary

#### E 6, E 9, E 12

Very large or very small number values are commonly expressed in a form called scientific notation, which consists of a decimal part multiplied by 10 raised to some power. For example,  $4.53 ext{ E 6}$  equals  $(4.53) ext{ x } (10^6) = (4.53) ext{ x } (10 ext{ x } 10 ext{ x } 10 ext{ x } 10 ext{ x } 10) = 4,530,000$ . Scientific notation is used to express large or small numbers without writing out long strings of zeros.

#### **EFRT**

An "external floating roof tank" minimizes VOC emissions with a roof with floats on the surface of the liquid, thus preventing the formation of a VOC-rich vapor space above the liquid surface as the level in the tank drops. If such a vapor space were allowed to form, it would be expelled when the tank was re-filled. On an EFRT, the floating roof is not enclosed by a second, fixed tank roof, and is thus described as an "external" roof.

#### District

The Bay Area Air Quality Management District

#### **EPA**

The federal Environmental Protection Agency.

#### **ETP**

**Effluent Treatment Plant** 

#### Excluded

Not subject to any District regulations.

## **FCC**

Fluid Catalytic Cracker

#### Federally Enforceable, FE

All limitations and conditions which are enforceable by the Administrator of the EPA including those requirements developed pursuant to 40 CFR Part 51, subpart I (NSR), Part 52.21 (PSD), Part 60 (NSPS), Part 61 (NESHAPS), Part 63 (HAP), and Part 72 (Permits Regulation, Acid Rain), including limitations and conditions contained in operating permits issued under an EPA-approved program that has been incorporated into the SIP.

#### FP

Filterable Particulate as measured by BAAQMD Method ST-15, Particulate.

## FR

Federal Register

#### FRT

Floating Roof Tank (See EFRT and IFRT)

#### **GDF**

Gasoline Dispensing Facility

# XI. Glossary

#### **GLM**

**Ground Level Monitor** 

## grains

1/7000 of a pound

## Graphitic

Made of graphite.

#### **HAP**

Hazardous Air Pollutant. Any pollutant listed pursuant to Section 112(b) of the Act. Also refers to the program mandated by Title I, Section 112, of the Act and implemented by both 40 CFR Part 63.

#### H<sub>2</sub>S

Hydrogen Sulfide

#### H2SO4

Sulfuric Acid

# Hg

Mercury

#### HHV

Higher Heating Value. The quantity of heat evolved as determined by a calorimeter where the combustion products are cooled to 60F and all water vapor is condensed to liquid.

## **IFRT**

An "internal floating roof tank" minimizes VOC emissions with a roof with floats on the surface of the liquid, thus preventing the formation of a VOC-rich vapor space above the liquid surface as the level in the tank drops. If such a vapor space were allowed to form, it would be expelled when the tank was re-filled. On an IFRT, the floating roof is enclosed by a second, fixed tank roof, and thus is described as an "internal" roof.

#### **ISOM**

Isomerization plant

# **LHV**

Lower Heating Value. Similar to the higher heating value (see HHV) except that the water produced by the combustion is not condensed but retained as vapor at 60F.

# Lighter

"Lightering" is a transfer operation during which liquid is pumped from an ocean-going tanker vessel to a smaller vessel such as a barge. Like any liquid transfer operation, lightering of organic liquids produces organic vapor emissions.

# Long ton

2200 pounds

# XI. Glossary

# **Major Facility**

A facility with potential emissions of: (1) at least 100 tons per year of regulated air pollutants, (2) at least 10 tons per year of any single hazardous air pollutant, and/or (3) at least 25 tons per year of any combination of hazardous air pollutants, or such lesser quantity of hazardous air pollutants as determined by the EPA administrator.

#### **MDEA**

Methyl Diethanolamine

#### MFR

Major Facility Review. The District's term for the federal operating permit program mandated by Title V of the Federal Clean Air Act and implemented by District Regulation 2, Rule 6.

#### Mo Gas

Motor gasoline

#### **MOP**

The District's Manual of Procedures.

#### **MOSC**

Mobil Oil Sludge Conversion (licensed technology)

#### **MSDS**

Material Safety Data Sheet

# **MTBE**

methyl tertiary-butyl ether

## NA

Not Applicable

# **NAAQS**

National Ambient Air Quality Standards

#### NESHAPS

National Emission Standards for Hazardous Air Pollutants. See in 40 CFR Parts 61 and 63

#### **NMHC**

Non-methane Hydrocarbons

# **NMOC**

Non-methane Organic Compounds (Same as NMHC)

# **NO**x

Oxides of nitrogen.

#### **NSPS**

# XI. Glossary

Standards of Performance for New Stationary Sources. Federal standards for emissions from new stationary sources. Mandated by Title I, Section 111 of the Federal Clean Air Act, and implemented by 40 CFR Part 60 and District Regulation 10.

#### **NSR**

New Source Review. A federal program for pre-construction review and permitting of new and modified sources of air pollutants for which the District is classified "non-attainment". Mandated by Title I of the Clean Air Act and implemented by 40 CFR Parts 51 and 52 as well as District Regulation 2, Rule 2. (Note: There are additional NSR requirements mandated by the California Clean Air Act.)

#### $O_2$

The chemical name for naturally-occurring oxygen gas.

# **Offset Requirement**

A New Source Review requirement to provide federally enforceable emission offsets at a specified ratio for the emissions from a new or modified source and any pre-existing cumulative increase minus any onsite contemporaneous emission reduction credits. Applies to emissions of POC, NOx, PM10, and SO2.

# **Phase II Acid Rain Facility**

A facility that generates electricity for sale through fossil-fuel combustion and is not exempted by 40 CFR 72 from Titles IV and V of the Clean Air Act.

#### **POC**

**Precursor Organic Compounds** 

#### **PM**

Particulate Matter

#### **PM10**

Particulate matter with aerodynamic equivalent diameter of less than or equal to 10 microns

#### **Process Unit**

For the purpose of start-up and shutdown reporting, a process unit is defined as in 40 CFR Part 60 Subpart GGG: Process Unit means components assembled to produce intermediate or final products from petroleum, unfinished petroleum derivatives, or other intermediates; a process unit can operate independently if supplied with sufficient feed or raw materials and sufficient storage facilities for the product.

#### **PSD**

Prevention of Significant Deterioration. A federal program for permitting new and modified sources of those air pollutants for which the District is classified "attainment" of the National Air Ambient Quality Standards. Mandated by Title I of the Act and implemented by both 40 CFR Part 52 and District Regulation 2, Rule 2.

#### **Regulated Organic Liquid**

"Regulated organic liquids" are those liquids which require permits, or which are subject to some regulation, when processed at a liquid-handling operation. For example, for refinery

# XI. Glossary

marine terminals, regulated organic liquids are defined as "organic liquids" in Regulation 8, Rule 44.

#### **RFG**

Refinery Fuel Gas

#### **RMG**

Refinery Make Gas

#### SCR

A "selective catalytic reduction" unit is an abatement device that reduces NOx concentrations in the exhaust stream of a combustion device. SCRs utilize a catalyst, which operates at a specific temperature range, and injected ammonia to promote the conversion of NOx compounds to nitrogen gas.

#### **SIP**

State Implementation Plan. State and District programs and regulations approved by EPA and developed in order to attain the National Air Ambient Quality Standards. Mandated by Title I of the Act.

#### SO<sub>2</sub>

Sulfur dioxide

# **SO2** Bubble

An SO2 bubble is an overall cap on the SO2 emissions from a defined group of sources, or from an entire facility. SO2 bubbles are sometimes used at refineries because combustion sources are typically fired entirely or in part by "refinery fuel gas" (RFG), a waste gas product from refining operations. Thus, total SO2 emissions may be conveniently quantified by monitoring the total amount of RFG that is consumed, and the concentration of H2S and other sulfur compounds in the RFG.

#### SO<sub>3</sub>

Sulfur trioxide

# Start-up

For reporting purposes only, a start-up shall be defined as any of the following; the removal of boundary blinds, first fire to a furnace, or the introduction of process feed to a unit. A start-up only occurs following a shutdown unless it involves a newly constructed process unit.

#### **Shutdown**

For reporting purposes only, a shutdown shall be defined as any of the following; there is no process feed to a unit, no furnace fires, or the boundary blinds are installed.

## THC

Total Hydrocarbons (NMHC + Methane)

#### therm

100,000 British Thermal Units

# XI. Glossary

# Title V

Title V of the federal Clean Air Act. Requires a federally enforceable operating permit program for major and certain other facilities.

#### TOC

Total Organic Compounds (NMOC + Methane, Same as THC)

# **TPH**

**Total Petroleum Hydrocarbons** 

# **TRMP**

Toxic Risk Management Plan

# **TRS**

"Total reduced sulfur" is a measure of the amount of sulfur-containing compounds in a gas stream, typically a fuel gas stream, including, but not limited to, hydrogen sulfide. The TRS content of a fuel gas determines the concentration of SO2 that will be present in the combusted fuel gas, since sulfur compounds are converted to SO2 by the combustion process.

# **TSP**

**Total Suspended Particulate** 

#### **TVP**

True Vapor Pressure

#### **VOC**

Volatile Organic Compounds

# **Units of Measure:**

bbl	=	barrel
bhp	=	brake-horsepower
btu	=	British Thermal Unit
C	=	degrees Celcius
d	=	day
F	=	degrees Farenheight
$f^3$	=	cubic feet
g	=	grams
gal	=	gallon
gpm	=	gallons per minute
hp	=	horsepower
hr	=	hour
lb	=	pound
in	=	inches
k	=	thousand

# XI. Glossary

M thousand  $m^2$ = square meter maximum max = mega-gram, one thousand grams Mg micro-gram, one millionth of a gram μg = min = minute MM million = mm = millimeter million btu MMbtu = millimeters of Mercury (pressure) mm Hg MW megawatts = month mo parts per million, by volume ppmv = ppmw parts per million, by weight pounds per square inch, absolute psia = pounds per square inch, gauge psig = scf standard cubic feet scfm standard cubic feet per minute = yr year

# **Symbols:**

< = less than
> = greater than

 $\leq$  = less than or equal to  $\geq$  greater than or equal to

# XII. APPLICABLE STATE IMPLEMENTATION PLAN

The Bay Area Air Quality Management District's portion of the State Implementation Plan can be found at EPA Region 9's website. The address is:

http://yosemite.epa.gov/r9/r9sips.nsf/Agency?ReadForm&count=500&state=California&cat=Bay+Area+Air+Quality+Management+District-Agency-Wide+Provisionshttp://yosemite1.epa.gov/r9/r9sips.nsf/California?ReadForm&Start=1&Count=30&Expand=4.1

# XIII. INDEX

This index is by source number, listed in "software" order.
