# USFWS INTERIM GUIDELINES TO AVOID AND MINIMIZE WILDLIFE IMPACTS FROM WIND TURBINES

A field perspective

Presentation to the Wind Turbine Guidelines Federal Advisory Committee

Tim Sullivan New York Ecological Services Field Office Cortland, New York

February 27, 2008

### Overview

Description of the guidelines
Region 5 use of the guidelines
Guidelines in NY & other states
Resource issues in Region 5

## **Three Parts to the Guidelines**

Part 1 – Recommendations on site selection, site development, wildlife studies, turbine design, placement and operation

Part 2 – Potential Impact Index (PII) Protocol

Part 3 – Appendices (8)

#### Guidelines to Avoid and Minimize Wildlife Impacts from Wind Turbines

#### Part 1

- Recommends precautionary approach
- Suggests efforts to avoid, minimize and mitigate impacts
- Identifies site evaluation and wildlife study procedures
- Provides project and turbine design recommendations

## Guidelines to Avoid and Minimize Wildlife Impacts from Wind Turbines

Part 2

Team of wildlife professionals

- Use the PII Evaluation System
- Identify and evaluate reference sites
- Evaluate development site(s) and rank according to resources
- Use checklists of physical, biological and ecological resources

## Guidelines to Avoid and Minimize Wildlife Impacts from Wind Turbines

Part 3

- Appendices
  - PII checklist forms and instructions
  - Wind energy definitions
  - Relevant wildlife laws
  - Wildlife/wind power research needs
  - Endangered species consultation procedures
  - Wind turbine siting on NWR lands
  - Impacts of wind turbines on wildlife
  - Literature cited

#### Installed Wind Energy Capacity 1999-2007

## **FWS Region 5**

- Maine
- New Hampshire
- Vermont
- Massachusetts
- Connecticut
- Rhode Island
- New York
- Pennsylvania
- New Jersey
- Delaware
- West Virginia
- Virginia

# Wind Resources in Region 5

#### **State Wind Potential**

| State         | Rank in wind resource             | Installed capacity (Mw) |
|---------------|-----------------------------------|-------------------------|
| Maine         | 24                                | 42                      |
| New Hampshire | 32                                | 1                       |
| Massachusetts | 29                                | 5                       |
| Connecticut   | 34                                | 0                       |
| Vermont       | 28                                | 6                       |
| Rhode Island  | 34                                | 1                       |
| New York      | 11                                | 425                     |
| Pennsylvania  | 14                                | 294                     |
| Delaware      | 34                                | 0                       |
| New Jersey    | 26                                | 8                       |
| West Virginia | 20                                | 66                      |
| Maryland      | 34                                | 0                       |
| Virginia      | <b>40</b><br>. data as of 1/16/08 | 0                       |

## **Agency Information Exchange**

- Coordination between offices
- Monthly regional meetings
- National meetings
  - Participation by field office biologists
  - Feedback from regional and Washington staff
- Intranet site
- Information from various program areas
  - Division of Migratory Bird Management
  - National Wildlife Refuge System
  - Solicitors Office
  - Washington and regional offices
- State partners, NGOs, citizens
- Industry, consultants
- Other government agencies

# **Challenges for Field Offices**

Provide consistent and appropriate recommendations

Be flexible to suit various situations

Work with each individual state

Guidelines and relevant laws

# How are the Guidelines used by Field Offices ?

- Query of R5 offices
- Questions:
  - A. Does your office recommend use of the Guidelines?
  - B. If not, why not?
  - C. Does you office reference the Guidelines in correspondence?
  - D. Do others reference the Guidelines?
  - E. Does industry use the Guidelines?
  - F. Should the Guidelines, in some form, be mandatory?

#### Field Office Responses

| FO/Questions | A   | В   | С   | D      | Е  | F   |
|--------------|-----|-----|-----|--------|----|-----|
| 1            | no  | n/a | no  | yes    | no | ?   |
| 2            | yes | -   | yes | yes    | no | yes |
| 3            | yes | -   | yes | yes    | no | yes |
| 4            | yes | -   | yes | yes    | no | yes |
| 5            | yes | -   | yes | rarely | no | no  |
| 6            | yes | -   | yes | yes    | no | yes |

# **Field Office Positions**

Most FOs recommend multi-year intervals for preconstruction studies

 One state mentions potential impacts to insects as well as birds and bats

All FOs mention ESA issues, if appropriate

Most recommend contacting FWS before proceeding with studies

# **FWS Letters**

MBTA
ESA language
Fish and Wildlife Coordination Act
Clean Water Act
Others depending upon the project
The need for further coordination

# **Example FO Letter**

"Although they are voluntary, the Service's Interim Guidelines on Avoiding and Minimizing Impacts from Wind Turbines may be helpful as you evaluate your proposed wind power generation site (http://www.fws/gov/r9dhcbfa/windenergy). The guidance contains a pre-development site evaluation and ranking process to assess potential project impacts, as well as recommendations for conducting post-construction monitoring. In Appendices 3 and 5, the guidance also contains more information on applicable laws and permitting."

#### Wildlife Guidelines in Region 5 States

| STATE         | GUIDELINES | Planned |
|---------------|------------|---------|
| Maine         | Yes        |         |
| New Hampshire | No         | Yes     |
| Massachusetts | No         |         |
| Connecticut   | No         |         |
| Vermont       | No         | Yes     |
| Rhode Island  | No         |         |
| New York      | Yes        |         |
| Pennsylvania  | Yes        |         |
| New Jersey    | No         |         |
| Delaware      | No         | Yes     |
| West Virginia | No         |         |
| Maryland      | No         | Yes     |
| Virginia      | No         |         |

## **New York Wind Resources**

## **NY Wind Projects**

#### NY DATA

Overall US rank in installed capacity: **11** 

Overall US rank in wind potential capacity: 15

Power of projects under construction: 282 Mw

Power capacity of 6 existing projects: **425** Mw

Source: American Wind Energy Association, data as of 1/16/08

# How the FWS Guidelines are Viewed in New York

#### Local officials

Depends upon knowledge of issues

Position on wind energy

– Not used as a default

Citizens

 What can you do to stop this project?
 Genuine concern about wildlife

# How the FWS Guidelines are Viewed in New York (cont.)

#### NGOs

- Most support use of the Guidelines
- Local chapters of one organization in NE urged National office to support Guidelines
- HMANA, Audubon, TWS

#### Industry

- Generally does not support Guidelines
- However, some individual companies agree to implement portions - lighting and guy wires
- Some suggest a red-yellow-green classification of projects to provide predictability

## **NYS DEC Guidelines**

Highlights of state guidelines

 Result of meeting with industry, FWS, experts
 Recommend pre and post construction studies
 Do not reference or cite FWS guidelines
 Currently accepting comments

# Differences between Federal and NY State Guidelines

| New York State | USFWS  |
|----------------|--|
| No             | Yes  |
| Yes            | No   |
| 1 year         | 1+ years   |
| 3 years        | 3 years  |
|                | New York State<br>No<br>Yes<br>1 year<br>3 years |

## **Resource Issues in Region 5 - Birds**

Nocturnal migrants
High passage rates compared to west
Grassland and forest species displacement
Potential impacts to species of concern

#### **The Bat - Wind Turbine Issue**

In 2003 1,400–4,000 bats killed at the Mountaineer Wind Energy Center in West Virginia

**Bats appear attracted to turbines but why?** 

Acoustic response ' Visual response ? Potential roosts ? Food source ?

No one has yet answered this question

## **Resource Issues in Region 5 - Bats**

High bat mortality during migration
 Projects being proposed near hibernacula
 White nose syndrome

#### **Bat Fatalities by Species and Region**

Table 1. Species composition<sup>1</sup> of annual bat fatalities reported for wind energy facilities in the United States, modified from Johnson (2005)

| Species <sup>2</sup>       | Pacific<br>Northwest | Rocky<br>Mountains | South—<br>Central | Upper<br>Midwest | East        | Total        |
|----------------------------|----------------------|--------------------|-------------------|------------------|-------------|--------------|
| Hoary bat                  | 153 (49.8%)          | 155 (89.1%)        | 10 (9.0%)         | 309 (59.1%)      | 396 (28.9%) | 1023 (41.1%) |
| Eastern red bat            | -                    | -                  | 3 (2.7%)          | 106 (20.3%)      | 471 (34.4%) | 580 (23.3%)  |
| Western red bat            | 4 (1.3%)             | -                  | -                 | _                | _           | 4 (0.2%)     |
| Seminole bat               | -                    | -                  | -                 | -                | I (0.1%)    | I (0.1%)     |
| Silver-haired bat          | 94 (30.6%)           | 7 (4.1%)           | I (0.9%)          | 35 (6.7%)        | 72 (5.2%)   | 209 (8.4%)   |
| Eastern pipistrelle        | _                    | -                  | I (0.9%)          | 7 (1.3%)         | 253 (18.5%) | 261 (10.5%)  |
| Little brown myotis        | 2 (0.7%)             | 6 (3.5%)           | _                 | 17 (3.3%)        | 120 (8.7%)  | 145 (5.8%)   |
| Northern long-eared myotis | -                    | -                  | -                 | -                | 8 (0.6%)    | 8 (0.4%)     |
| Big brown bat              | 2 (0.7%)             | 2 (1.1%)           | I (0.9%)          | 19 (3.6%)        | 35 (2.5%)   | 59 (2.4%)    |
| Brazilian free-tailed bat  | 48 (15.6%)           | -                  | 95 (85.5%)        | _                | _           | 143 (5.7%)   |
| Unknown                    | 4 (1.3%)             | 4 (2.2%)           | -                 | 30 (5.7)         | 15 (1.1%)   | 53 (2.1%)    |
| Total                      | 307                  | 174                | 111               | 523              | 1371        | 2486         |

<sup>1</sup>Pacific Northwest data are from one wind energy facility in CA, three in eastern OR, and one in WA; Rocky Mountain data are from one facility in WY and one in CO; Upper Midwest data are from one facility in MN, one in WI, and one in IA; South–Central data are from one facility in OK; East data are from one facility in PA, one in WV, and one in TN. <sup>3</sup>One confirmed anecdotal observation of a western long-eared myotis (*Myotis evotis*) has been reported in CA, but is not included in this table.

Kunz et al. 2007

#### **Estimated US Average Bat Mortality**

| Region   | # studies                  | #/turbine/yr              | #/MW/y                    |
|--|----------------------------|---------------------------|---------------------------|
| Northwest<br>Rocky Moun<br>Upper Midwe<br>East | 5<br>tains 2<br>est 5<br>4 | 1.9<br>1.2<br>3.3<br>46.3 | 1.6<br>1.9<br>4.2<br>32.0 |
| Overall  | 12                         | 3.4                       | - 4.6                     |

Source: G. Johnson, 2005.

#### **Direct, Indirect and Cumulative Effects**

- Direct habitat loss
- Habitat fragmentation
- Habitat modification
- Indirect effect of human disturbance
- Collision mortality with turbines

 Cumulative impact from projected number of turbines, all anthropogenic sources (pesticides, pets) and natural mortality

## Summary

Most Region 5 staff are recommending or referencing the guidelines (or parts of it) The interim, voluntary guidelines are not being used by industry Some states are developing their own guidelines but consistency is an issue The wind industry continues to grow but wildlife data are still lacking

## Summary

Take home message:

- The industry is growing at a rapid rate
- Information about wildlife resources is often vague or lacking
- Decision makers need data to formulate informed decisions
- Everyone is looking for a predictable process in which to work (industry, decision makers, agency staff)
- FWS Guidelines are needed by agency staff so that effective recommendations can be implemented
