

The following are Meiko's comments regarding the ENERGY STAR Program Requirements for Commercial Dishwashers Draft 2:

- All machines seeking Energy Star eligibility must be NSF listed as a prerequisite. This will ensure that the units will sanitize and remove soil properly.
- For idle testing, units that start by closing the door should have the extra wash and rinse cycle produced be included in the idle energy usage. The propping of the door to prevent this condition is not indicative of real world use.
