Adjustments to Household Survey Population Estimates in January 2008

reflect updated population controls. As part of its annual review of intercensal population estimates, the U.S. Census Bureau determined that a downward adjustment should be made to the household survey population controls. This adjustment stems from revised estimates of net international migration and the institutional population and updated vital statistics information. In addition, this year the Census Bureau introduced some methodological changes and improvements in the population estimation process. Documentation on the Census Bureau's population estimation methodology is available on their website at http://www.census.gov/popest/topics/methodology/2007-nat-meth.html. Questions about

population estimation should be directed to the Census Bureau's Population Division at 1-866-758-1060 or by email at pop@census.gov.

The updated controls resulted in a decrease of 745,000 in the estimated size of the civilian noninstitutional population 16 years of age and over for December 2007. Official population and labor force estimates for December 2007 and earlier months will not be revised.

A comparison of December 2007 data based on the old and new controls shows that the population adjustments caused decreases in the labor force (-637,000), employment (-598,000), and unemployment (-40,000). The total unemployment rate, however, was not affected and the impact was negligible on other percentage measures. (See table below.)
