

Daily Weather Maps

JULY 28, 2008 - AUGUST 3, 2008

Week 31

The following charts are the principal charts of the former National Weather Service publication, "Daily Weather Map." They are the Surface Weather Map, the 500-Millibar Height Contours chart, the Highest and Lowest Temperatures chart, and the Precipitation Areas and Amounts chart. All charts are derived from the operational weather maps prepared at the National Centers for Environmental Prediction, Hydrometeorological Prediction Center, National Weather Service. The symbols on the Surface Weather Map and the 500-Millibar Height contours are standard international symbols.

The Surface Weather Map shows station data and the analysis for 7:00 a.m. EST. Areas of precipitation are indicated by shading. The weather reports displayed here are only a fraction of those on which the analyses are based. Occasional apparent discrepancies between the printed station data and the analyses result from the absence of station reports not included here because of a lack of space.

The 500-Millibar Height Contours chart shows height contours (solid lines), temperatures (dashed lines) and winds (arrows) at the 500-Millibar pressure level at 7:00 a.m. EST. The height contours show the height of the 500-millibar pressure level in dekameters above sea level and isotherms, the lines of constant temperature, are shown in degrees Celsius. Arrows show the wind direction and speed at the 500-Millibar level.

The Highest and Lowest Temperature chart shows the maximum temperature for a period from 7:00 a.m. EST the previous day through 1 a.m. EST and the minimum temperature for the period from 7:00 p.m. EST the previous day through 1 p.m. The maximum temperature is plotted above the station location and the minimum temperature is plotted below.

The Precipitation Areas and Amounts chart shows areas (shaded) that had precipitation during the 24 hours ending at 7:00 a.m. EST, with amounts to the nearest hundredth of an inch. "T" indicates a trace of precipitation.

The *Daily Weather Map* is published weekly by the U.S. Department of Commerce, National Oceanic and Atmospheric Administration (NOAA). NOAA and IMC are responsible for managing, printing, and distributing the bulletin. The contents may be reprinted freely, with proper credit.

Annual subscriptions: Domestic and International subscriptions are \$75. Check and credit card (Visa, MasterCard, Discover, and American

Express) payments are accepted. Payments (invoices) should be mailed to: NOAA/NCDC, P.O. Box 979023, St. Louis, MO 63197-9000; or invoices faxed to: (304) 726-4409.

FRIDAY, AUGUST 1, 2008

Surface Weather Map and Station Weather at 7:00 A.M. E.S.T.

Station Model

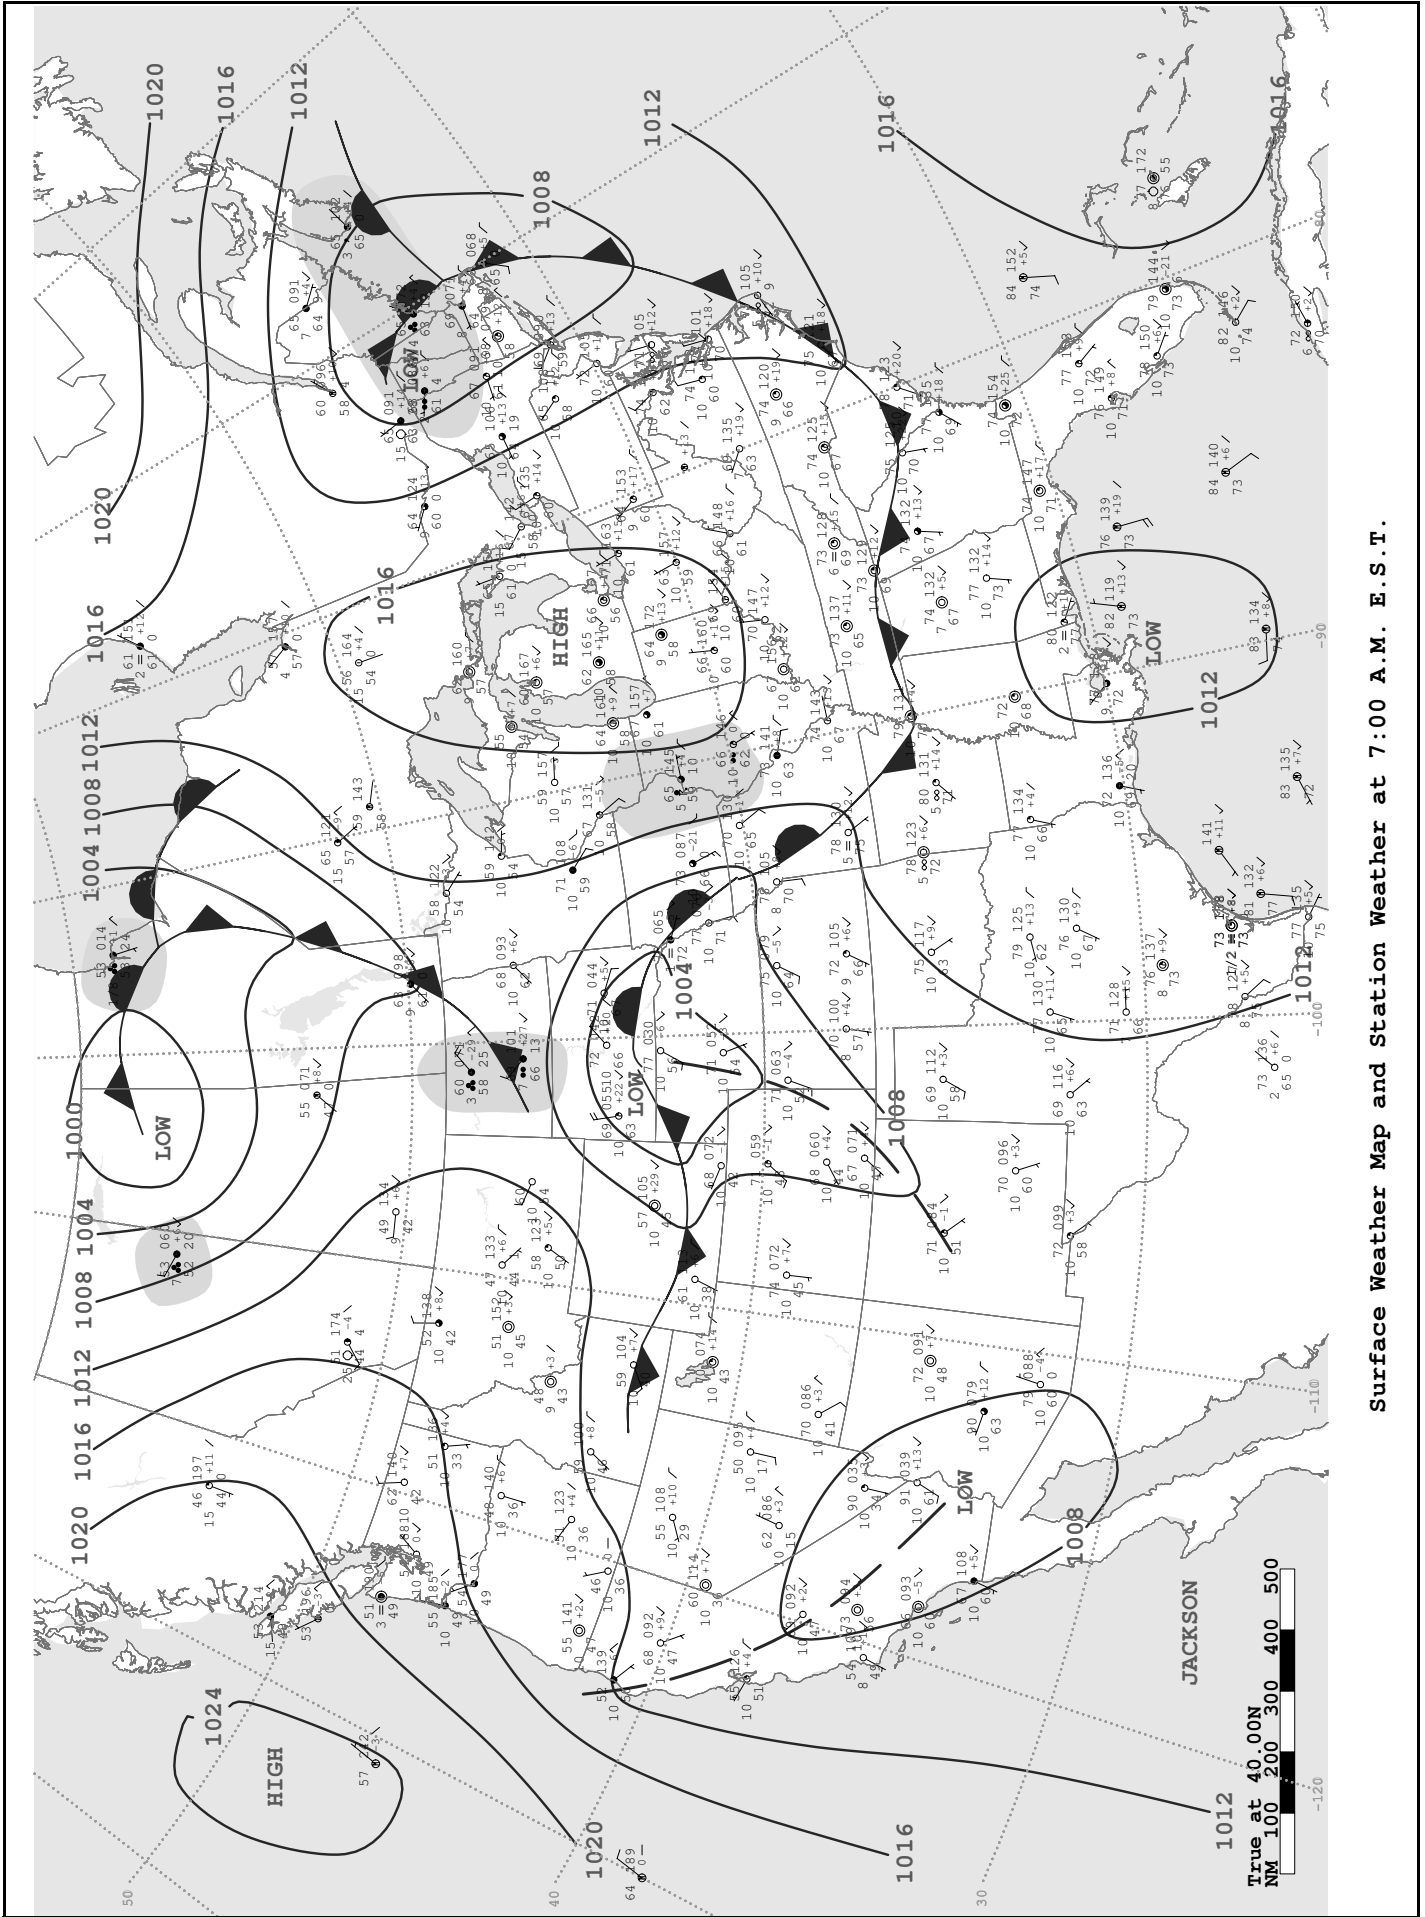

The station model diagram consists of the following elements:

- Wind Direction:** Indicated by a vertical line with a short horizontal bar at the top.
- Current Temperature (in °F):** Represented by the number 'dd'.
- Visibility (in miles):** Represented by the letter 'V'.
- Present Weather Symbol:** Represented by a circle containing a symbol (e.g., a cloud for overcast).
- Dew Point Temperature:** Represented by the letters 'TT'.
- Wind Speed:** Represented by a horizontal line with a vertical bar at the end, labeled 'ft'.
- 3-Digit Surface Pressure:** Represented by the letters 'PPP'.
- 3 Hour Pressure Tendency:** Represented by the letters 'PP a'.
- 6 Hour Total Precipitation (in hundredths of an inch):** Represented by the letters 'RR'.
- Sky Cover:** Represented by a horizontal line with a vertical bar at the end, labeled 'Sky_Cover'.

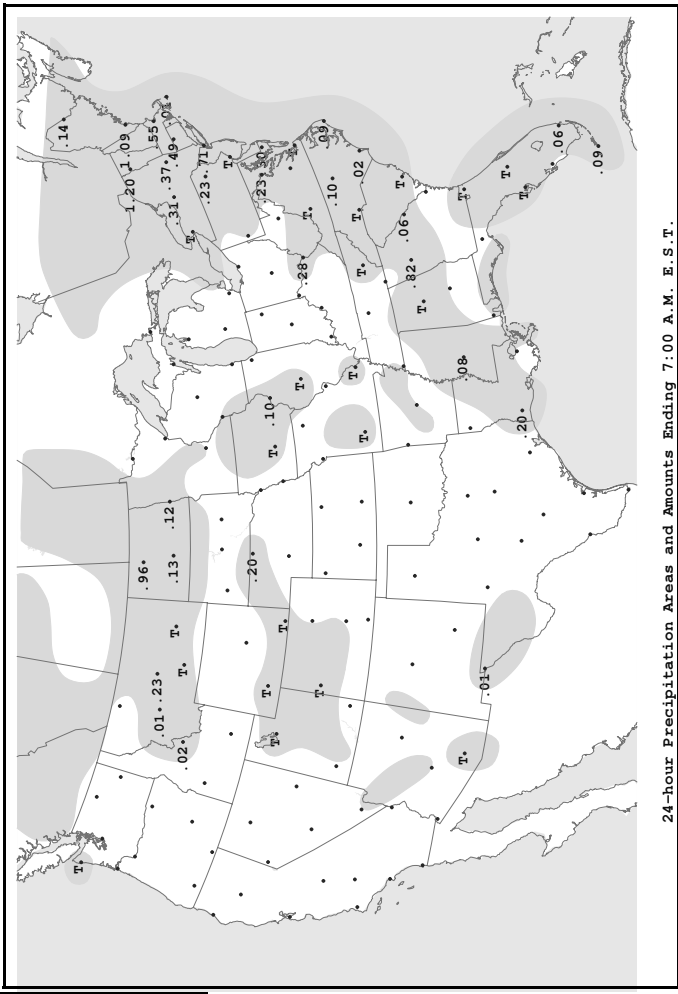

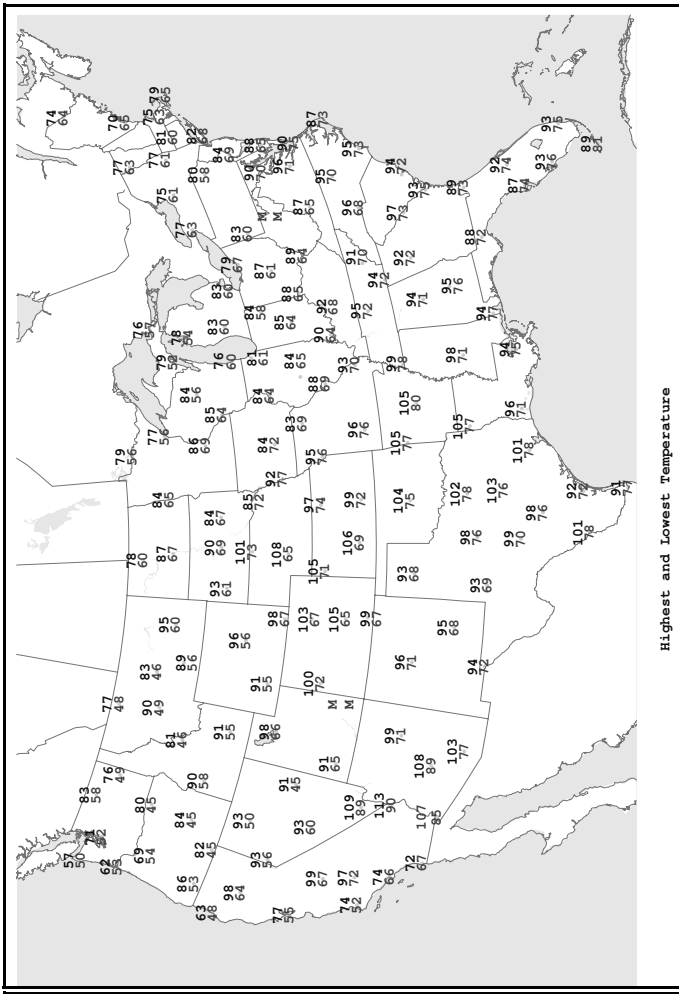

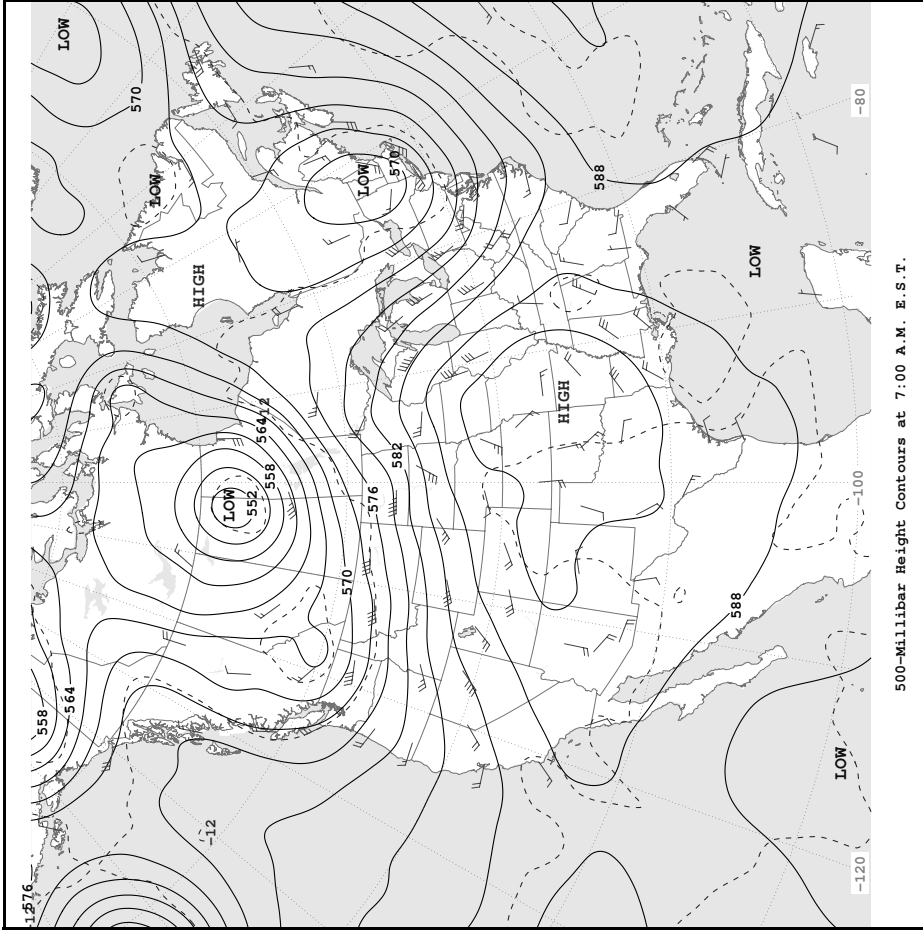

Additional information provided in the diagram:

- Long Feather - 10 knots
- Short Feather - 5 knots
- Ex: 989 = 998.9mb, 012 = 1001.2mb
