

Federal Remediation Technologies Roundtable Performance Based Contracting

Renee P. Wynn,
Deputy Director

Federal Facilities Restoration &
Reuse Office

May 25, 2005

Overview

- Regulator Involvement
- Potential Obstacles
- Keys to Success

Performance Based Contracting

- The use of PBC can lead to faster, cheaper and effective cleanup
- EPA supports the use of them at federal facilities

Success can happen when....

- Regulator understands the PBC concept
- Regulators participate in the development of the statement of work
- Roles and Responsibilities of involved parties are understood and supported
- Access to knowledgeable project managers
- Performance measures are agreed to by all involved parties
- Involved parties have sufficient resources

What PBC doesn't do....

- Provide an opportunity to disregard cleanup requirements
- Automatically require a change to enforceable agreements
- Replace good project management

Keys to Success

- Communication
- Collaboration
- Clear answers to the following questions:
 - What do I need?
 - When do I need it?
 - How do I know it's good when I get it?
