HOW CAN I SAFELY CAPTURE A BAT IN MY HOME?

- ▶ If professional help is not available, capture the bat safely as described below.
- ▶ You will need leather work gloves a coffee can or similar hard- sided container, a piece of cardboard and tape.
- ▶ When the bat lands, move toward it slowly. While wearing the gloves, put the container or coffee can over the bat.
- ▶ Then, slide the cardboard under the container to trap the bat inside.
- ▶ Tape the lid to the container, and punch holes in the lid, allowing the bat to breathe.
- ▶ Do not attempt to kill or crush the bat. The skull of the bat must be intact for testing.
- ▶ If the bat is not alive; it must be refrigerated, not frozen.
- ▶ Do not use towels or blankets to capture bats; many people have been bitten through the fabric doing this.
