UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration

National Marine Fisheries Service
P.O. Box 21668
Juneau, Alaska 99802-1668

March 2005

To Whom it May Concern:

The attached reports summarize the status of quota holdings by residents of 42 Alaska coastal communities under the halibut and sablefish Individual Fishing Quota (IFQ) program. For each included community, for each year (1995 - 2004), and for both species, the data show:

- The year-end amount of quota (expressed in 2004 equivalent pounds) held by residents of the communities;
- The number of persons holding such quota;
- The actual annual pounds of quota issued to quota holders;
- The actual annual pounds of quota fished; and,
- The estimated annual gross ex-vessel value of the quota that was fished.

Because these tables show several items of interest, and because the information could be somewhat confusing unless carefully examined, to fully understand the data it is necessary to carefully read the footnotes to the tables. If, having done so, questions about the data or their proper interpretation, remain, please contact RAM, as follows:

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. **Table 1:**
 - a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.
- 5. **Tables 2 and 3:**
 - a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
 - d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.

* Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.

1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.

2. Residence determinations are based on self-reported addresses provided by QS holders.

3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.

b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.

b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.

c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).

d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

- a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

- a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
- d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.

* Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.

1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.

2. Residence determinations are based on self-reported addresses provided by QS holders.

3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.

b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.

b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.

c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).

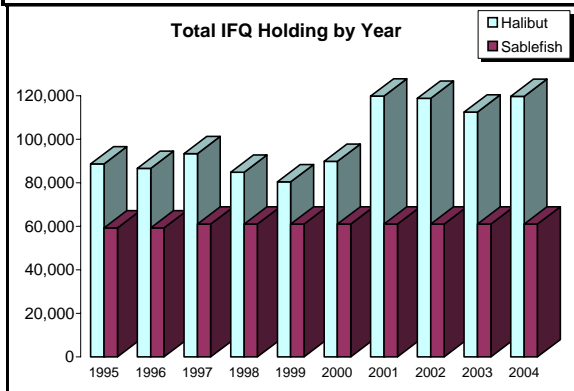

d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.

* Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.

1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.

2. Residence determinations are based on self-reported addresses provided by QS holders.

3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.

b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.

b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.

c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).

d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. **Table 1:**
 - a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.
- 5. **Tables 2 and 3:**
 - a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
 - d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.

* Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.

1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.

2. Residence determinations are based on self-reported addresses provided by QS holders.

3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.

b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.

b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.

c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).

d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

2. Residence determinations are based on self-reported addresses provided by QS holders.

3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.

b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.

b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.

c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).

d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. **Table 1:**
 - a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.
- 5. **Tables 2 and 3:**
 - a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
 - d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. **Table 1:**

- a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. **Tables 2 and 3:**

- a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2003).
- d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. **Table 1:**

- a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. **Tables 2 and 3:**

- a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
- d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

- a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

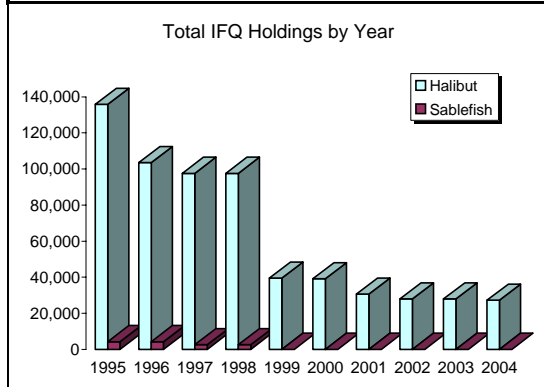

- a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
- d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.

* Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.

- Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- Residence determinations are based on self-reported addresses provided by QS holders.
- Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

- "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

- "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2003).
- "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

- a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

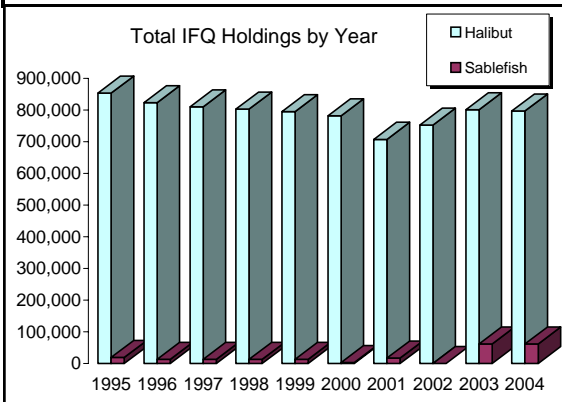

- a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska (for 1995-1999) and by NMFS/RAM for (2000-2004).
- d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

- a. **"2004 Equivalent Pounds"** are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. **"Persons"** includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

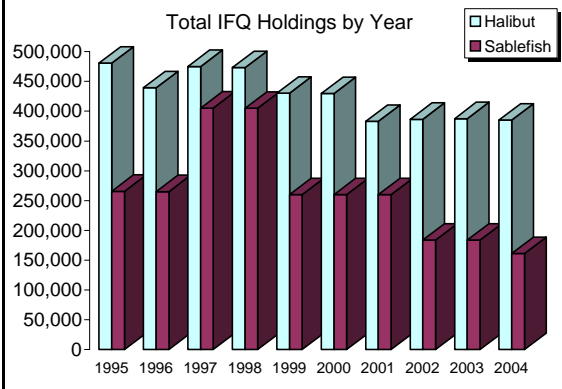

- a. **"Pounds Issued"** are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. **"Pounds Landed"** display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. **"Estimated Earnings"** are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
- d. **"Individuals"** includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.

4. Table 1:

- a. **"2004 Equivalent Pounds"** are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
- b. **"Persons"** includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.

5. Tables 2 and 3:

- a. **"Pounds Issued"** are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
- b. **"Pounds Landed"** display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
- c. **"Estimated Earnings"** are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2003).
- d. **"Individuals"** includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.

Notes

- ** Indicates that the data are confidential because they are derived from the activities of fewer than four individuals.
- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. **Table 1:**
 - a. "2004 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2004 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "Persons" includes all entities (including individuals, corporations, etc.) holding QS in the subject community, as of the end of the indicated year.
- 5. **Tables 2 and 3:**
 - a. "Pounds Issued" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are not adjusted for "overages and underages" resulting from prior years fishing activities, so they may be slightly over- or under-stated.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year. In some instances these may exceed the "pounds issued" for a community because as noted above: i) the "pounds issued" are calculated from year-end QS holdings while the "pounds landed" are summaries of actual landings; and, ii) the "pounds issued" are not adjusted for overages and underages from the prior year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the State of Alaska for (1995-1999) and by NMFS/RAM for (2000-2004).
 - d. "Individuals" includes all individuals with recorded landings of IFQ derived from QS held by persons in the subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
