Industrial Outlook

This section presents industry statistics for selected manufacturing industries. The industry groupings correspond to those used in the 1994 U.S. *Industrial Outlook*. The tables contain new and revised data from the 1995 *Annual Survey of Manufactures* along with revised industry data for 1987 through 1992 from the 1992 *Census of Manufactures: General Summary*.

To provide a more accurate picture of industry trends, the value of shipments shown in these tables are expressed both in "current dollars" and in inflation-adjusted or "constant dollars." Current dollars show the value of the goods in the year they are produced. Constant dollars (or "real" dollars) show the value of shipments as they would be valued if produced in the base year. This permits shipment levels from different years to be compared. The constant dollar shipments (base year 1992) were derived by deflating the product class shipments from the Bureau of the Census using the Bureau of Labor Statistics' producer price indexes.

The tables contain both "industry" and "product" shipments. The Bureau of the Census collects shipments data from individual factories (or establishments) rather than at the company level. Most factories make a variety of products, but for statistical purposes each factory is classified in the industry associated with its major product. For instance, the total output of a plant may consist of 80 percent tires and 20 percent hose and belting. In this case, the total output of the plant would be credited to the tire industry, and the shipments of all plants so classified would make up the "industry shipments" of the tire industry. The value of all tires shipped by all establishments is aggregated to derive "product shipments."

Trade data were tabulated following the Bureau of the Census's 1997 trade concordance (with a few exceptions) to approximate the Standard Industrial Classification (SIC) industry groupings. Exports are limited to domestic exports and are valued "free alongside ship" or f.a.s. Imports are restricted to goods imported for consumption and are on a customs value basis. Trade data should only be compared with product shipments data.

Researchers who once relied on the *U.S. Industrial Outlook* will be greatly assisted by the publication of the *U.S. Industry and Trade Outlook* 1998 in the fall of 1997. This new publication is the result of an innovative public-private partnership between the International Trade Administration of the Department of Commerce and the McGraw-Hill companies. Authorship is shared by the Commerce Department, other government agencies, and McGraw-Hill. As in years past, the new *Outlook* is anchored by historical statistical data provided by the Bureau of the Census.

The *Outlook* is a basic resource for industry analysis and business development. The 1998 edition will contain 50 chapters covering important manufacturing and service sectors, along with industry snapshots, and hundreds of industry reviews, analyses, and forecasts. This new publication continues the legacy of the *U.S. Industrial Outlook*, the most widely read and respected single source industry-by-industry overview of the U.S. economy. Like its predecessor, the *Industry and Trade Outlook* is a single source reference for business planners, investors, researchers, and students who need to know where major sectors of the U.S. economy have been and where they are going in an increasingly global marketplace. For sales information contact the National Technical Information Service, 703/487-4650.
