

SPECIFICATION

PROPERTY NO. 137995

ANTI SKINNING SPRAY

GENERAL REQUIREMENTS

This item shall be an aerosol unit containing a suitable antioxidant such as butylated hydroxytoluene or clove that will eliminate press wash ups during the shut down periods. When sprayed on ink rollers, the product shall prevent sheet-fed offset and letter press inks from drying on rollers for periods up to eight (8) hours. The product should have no objectional odor or solvents detrimental to rollers or other press parts. The product must not change the color or viscosity of inks during normal use.

Specific Requirements

When applied to a non-absorbent substrate such as lithocoated stock, black sheet-fed offset ink shall be wet to the touch, 24 hours after spraying.

The product can not contain methylene chloride.

Packaging

The anti-skinning spray shall be packaged in 14-18 ounce (net weight) pressurized cans.

Sample Requirements

A one can sample of this product is required for testing to determine suitability for use at the GPO. A Material Safety Data Sheet must be submitted with the sample.
