NORTHWEST POWER
AND CONSERVATION
ADMINISTRATION

Dear Bonneville Power Administration,
There is a real possibility that
electrical cables may cause lightning.

The high power cables and transformers
agitate ions that when undisturbed help
preserve precious moisture and allow
light refractions to help plants mature.

We consumers wish for your help
and consideration for our existance.

But pardon us for your time.

As a patron of your services.

A sincere thank you for everything.

Michael N. Winger
