- 8. Can lightning and tornado cause deaths and injuries?
- 9. The best place to take shelter during a thunderstorm is:
- A. Under a tree
- B. In a car
- C. Inside a house

## **Heat Waves**

A Heat Wave means that it is very hot outside for many days, even weeks. This can mean more deaths and sicknesses among older people, babies, and people with heart and breathing problems.

## **Air Pollution**

In some weather conditions, high levels of *OZOME* can increase in our atmosphere and make breathing problems even worse. Pollen can also increase the number of allergies and asthma attacks.

## **Extreme Weather Events**

Disasters such as hurricanes can cause deaths and injuries. Floods from these storms may increase the risk of standing water, which can become a good place for bacteria and germs to grow.
