Iris IQ of a Sample Population

Valorie S. Valencia, PhD

Biometric Quality Workshop II

November 7-8, 2007

National Institute of Standards and Technology

Iris IQ Data Analysis

- Performed with iris images collected using three commercial iris recognition cameras
 - From NIJ/DHS Iris Recognition Study 2006 (IRIS06)
 - Award No. 2005-IJ-CX-K066
 - Product A, Product B, Product C (names not identified)
- Data collected in standard indoor office environment using BioAPI 1.1 test harness interface
- About 29,000 ISO/IEC 19794-6 compliant iris images collected from ~300 live test subjects
- Two visits separated by ~6 weeks
 - Visit 1
 - 297 live human test subjects
 - Enrollment and 6 recognition attempts
 - Visit 2
 - 264 repeat test subjects
 - 6 recognition attempts

Visit 2 Demographics Pie Charts

(264 test subjects completed both Visits 1 and 2)

Target demographic profile based on 2000 US Census

Iris IQ Evaluation

- Analysis performed with Daugman 2007 template generation, matching, and quality algorithms
- Special thanks to:
 - Professor John Daugman

www.cl.cam.ac.uk/~jgd1000/

- The iris recognition vendors that kindly supplied the products that were evaluated

Image IQ Analysis Details

- “Bad” images removed for this analysis
- Genuine scores from all recognition attempts included in analysis
 - Represents average **single-attempt** performance over Visits 1 and 2
- Left and right eyes treated as separate individuals
 - Represents average performance of left and right eyes

	Self Reported	Confirmed during review	Assigned during review	Measured during data collection	Filterable

Glasses On vs Quality

Conclusions

- No clear conclusions, only more questions
 - Race and age do not appear to influence iris recognition matching performance
 - Poor eyesight and wearing glasses appear to degrade matching performance
- Work in progress, stay tuned . . .
