OCC BANK DERIVATIVES REPORT THIRD QUARTER 2000

GENERAL

The OCC quarterly report on bank [derivatives](#) activities and trading revenues is based on quarterly call report information provided by U.S. commercial banks.

The notional amount of derivatives in insured commercial bank portfolios decreased by \$1.01 trillion in the third quarter, to \$38.3 trillion. Generally, changes in notional volumes are reasonable reflections of business activity but do not provide useful measures of risk. During the third quarter, the notional amount of interest rate contracts decreased by \$547 billion, to \$30.9 trillion. Foreign exchange contracts decreased by \$455 billion to \$6 trillion. This figure excludes spot foreign exchange contracts, which increased by \$55.6 billion to \$438 billion. Equity, commodity and other contracts fell by \$25 billion, to \$1.02 trillion. Credit derivatives increased by \$17 billion, to \$379 billion. The number of commercial banks holding derivatives increased by 5, to 421. [See Tables [1](#), [2](#), and [3](#), Graphs [1](#) and [3](#).]

Eighty-one percent of the notional amount of [derivative](#) positions was comprised of interest rate contracts with foreign exchange accounting for an additional sixteen percent. Equity, commodity and credit derivatives accounted for only three percent of the total notional amount. [See Table [3](#) and Graph [3](#).]

Holdings of [off-balance sheet](#) derivatives continue to be concentrated in the largest banks. Seven commercial banks account for over 95 percent of the total notional amount of derivatives in the commercial banking system, with more than 99 percent held by the top 25 banks. [See Tables [3](#), [5](#) and Graph [4](#).]

[Over-the-counter \(OTC\) and exchange-traded contracts](#) comprised 91.6 percent and 8.4 percent, respectively, of the notional holdings as of the third quarter of 2000. [See Table [3](#).] OTC contracts tend to be more popular with banks and bank customers because they can be tailored to meet firm-specific risk management needs. However, OTC contracts expose participants to greater credit risk and tend to be less liquid than exchange-traded contracts, which are standardized and fungible.

The notional amount of short-term contracts (i.e., with remaining maturities of less than one

year) increased by \$49 billion to \$14.4 trillion from the second quarter of 2000. Contracts with remaining maturities of one to five years fell by \$302 billion, to \$10.1 trillion, and long-term contracts (i.e., with maturities of five or more years) decreased by \$3 billion, to \$5.7 trillion. Longer term contracts present valuable customer service and revenue opportunities. They also pose greater risk management challenges as longer tenor contracts are generally more difficult to hedge and result in greater counterparty credit risk. [See Tables [8](#), [9](#) and [10](#), Graphs [7](#), [8](#) and [9](#).]

RISK

The notional amount is a reference amount from which contractual payments will be derived, but it is generally not an amount at risk. The risk in a [derivative](#) contract is a function of a number of variables, such as whether counterparties exchange notional principal, the volatility of the currencies or interest rates used as the basis for determining contract payments, the maturity and liquidity of contracts, and the credit worthiness of the counterparties in the transaction. Further, the degree of increase or reduction in risk taking must be considered in the context of a bank's aggregate trading positions as well as its asset and liability structure. Data describing fair values and credit risk exposures are more useful for analyzing point-in-time risk exposure, while data on trading revenues and contractual maturities provide more meaningful information on trends in risk exposure.

Table 4 contains summary data on counterparty credit exposures. The credit exposures shown are measured using the parameters contained in the [risk-based capital](#) guidelines of the U.S. banking agencies. There was a \$18 billion decrease in the third quarter in total credit exposure from [off-balance sheet contracts](#), to \$400 billion. Total credit exposures for the top seven banks decreased to 239 percent of risk-based capital in the third quarter of 2000 from 247 percent in the second quarter of 2000. The decrease in the dollar amount of total credit exposure is primarily due to the volume of derivative contracts. Credit exposure would have been significantly higher without the benefit of [bilateral netting](#) agreements. The extent of the benefit can be seen by comparing gross positive fair values from Table 6 to the bilaterally-netted current exposures shown in Table 4. Netting reduced current credit exposures by close to 66 percent in the third quarter. [See Tables [4](#) and [6](#), Graphs [5a](#) and [5b](#).]

Past-due [derivative](#) contracts remained at nominal levels. For all banks, the book value of contracts past due 30 days or more aggregated to only \$9 million or .0023 percent of total credit exposure from derivatives contracts. A more complete assessment of the magnitude of troubled derivative exposures would include restructured derivative contracts, contracts re-written as loans, and those accounted for on a non-accrual basis in addition to past due contracts. Call Report instructions, however, currently require banks to report only past due derivative contracts. Therefore, use of past-due information alone may not provide a complete picture of the extent of troubled derivative exposures.

During the third quarter of 2000 banks charged off \$1 million due to credit losses from off-balance sheet derivatives, or .0003 percent of the total credit exposure from derivative contracts. For comparison purposes, net loan charge-offs relative to total loans for the quarter were .42 percent. [See Graph [5c](#).]

The Call Report data reflect the significant differences in business strategies among the banks. The preponderance of trading activities, including both customer transactions and proprietary positions, is confined to the very largest banks. The banks with the 25 largest derivatives portfolios hold 97 percent of their contracts for trading purposes, primarily customer service transactions, while the remaining 3 percent are held for their own risk management needs. Trading contracts represent over 96 percent of all notional amounts in the commercial banking system. Smaller banks tend to limit their use of derivatives to risk management purposes. [See Table [5](#).]

The gross positive and gross negative fair values of derivatives portfolios are relatively balanced; that is, the value of positions in which the bank has a gain is not significantly different from the value of those positions with a loss. In fact, for derivative contracts held for trading purposes, the seven largest banks have \$390 billion in gross positive fair values and \$383 billion in gross negative fair values. Note that while gross fair value data is more useful than notional amounts in depicting meaningful market risk exposure, users must be cautioned that these figures do not include risk mitigating or risk adding transactions in cash trading accounts. Similarly, the data are reported on a legal entity basis and consequently do not reflect the effects of positions in portfolios of affiliates. [See Table [6](#).]

End-user positions, or derivatives held for risk management purposes, have aggregate gross positive fair values of \$8.6 billion, while the gross negative fair value of these contracts also aggregated to \$8.6 billion. These figures are only useful in the context of a more complete analysis of each bank's asset/liability structure and risk management process. For example, these figures do not reflect the impact of off-setting positions on the balance sheet. [See Table [6](#).]

The notional amount of credit derivatives reported by insured commercial banks increased by 5 percent from second quarter levels, or \$17 billion, to \$379 billion. Notional amounts for the 21 commercially insured institutions that sold credit protection (i.e., assumed credit risk) to other parties was \$160 billion, an increase of \$4 billion from second quarter levels. The notional amount for the 16 commercial banks reporting credit derivatives that bought credit protection (i.e., hedged credit risk) from other parties was \$219 billion, a \$13 billion increase from the second quarter. [See Tables [1](#), [3](#) and Graphs [2](#), [3](#) and [4](#).]

REVENUES

The Call Report data include revenue information regarding trading activities involving cash instruments and off-balance sheet [derivative](#) instruments. The data also show the impact on net interest income and non-interest income from derivatives used in non-trading activities. Note that the revenue data reported in Table [7](#), Graphs [6a](#) and [6b](#) reflect figures for the second quarter alone, and are not annualized.

Relative to the second quarter of 2000, there was a decrease in trading revenues from cash instruments and derivatives activities of \$251 million, to \$2.8 billion in the third quarter of 2000. The top seven banks accounted for 82 percent of total trading revenue, compared to 84 percent in

the second quarter. In the third quarter, revenues from interest rate positions increased by \$127 million, to \$1.1 billion, while revenues from foreign exchange positions decreased by \$222 million, to \$1.1 billion. Banks reported revenue of \$549 million from equity, commodity and other (e.g. emerging market debt) trading positions in the third quarter. [See Table [7](#), Graphs [6a](#) and [6b](#).]

Derivatives held for purposes other than trading did not have a significant effect on either net interest income or non-interest income in the third quarter. Non-traded derivatives contributed \$167 million or .14 percent to the gross revenues of banks with derivative contracts in the third quarter. These figures reflect a decrease of \$167 million from the second quarter. These results are only useful in the context of a more complete analysis of each bank's asset/liability structure and risk management process.

####

GLOSSARY OF TERMS

Bilateral Netting: A legally enforceable arrangement between a bank and a counterparty that creates a single legal obligation covering all included individual contracts. This means that a bank's obligation, in the event of the default or insolvency of one of the parties, would be the net sum of all positive and negative fair values of contracts included in the bilateral netting arrangement.

Derivative: A financial contract whose value is derived from the performance of assets, interest rates, currency exchange rates, or indexes. Derivative transactions include a wide assortment of financial contracts including structured debt obligations and deposits, swaps, futures, options, caps, floors, collars, forwards and various combinations thereof.

Exchange-Traded Derivative Contracts: Standardized derivative contracts transacted on an organized exchange and which usually have margin requirements.

Gross Negative Fair Value: The sum total of the fair values of contracts where the bank owes money to its counterparties, without taking into account netting. This represents the maximum losses the bank's counterparties would incur if the bank defaults and there is no netting of contracts, and no bank collateral was held by the counterparties.

Gross Positive Fair Value: The sum total of the fair values of contracts where the bank is owed money by its counterparties, without taking into account netting. This represents the maximum losses a bank could incur if all its counterparties default and there is no netting of contracts, and the bank holds no counterparty collateral.

High-Risk Mortgage Securities: Securities where the price or expected average life is highly sensitive to interest rate changes, as determined by the FFIEC policy statement on high-risk mortgage securities. See also OCC Banking Circular 228 (rev.)

Off-Balance Sheet Derivative Contracts: Derivative contracts that generally do not involve booking assets or liabilities (i.e., swaps, futures, forwards, and options).

Over-the-Counter Derivative Contracts: Privately negotiated derivative contracts that are transacted off organized exchanges.

Structured Notes: Non-mortgage-backed debt securities, whose cash flow characteristics depend on one or more indices and/or have embedded forwards or options.

Total Risk-Based Capital: The sum of tier 1 plus tier 2 capital. Tier 1 capital consists of common shareholders equity, perpetual preferred shareholders equity with noncumulative dividends, retained earnings, and minority interests in the equity accounts of consolidated subsidiaries. Tier 2 capital consists of subordinated debt, intermediate-term preferred stock, cumulative and long-term preferred stock, and a portion of a bank's allowance for loan and lease losses.

*In billions of dollars; notional amount of futures, total exchange traded options, total over the counter options, total forwards, and total swaps. Note that data after 1994 do not include spot fx in the total notional amount of derivatives.

Credit derivatives were reported for the first time in the first quarter of 1997. Currently, the Call Report does not differentiate credit derivatives by product and thus they have been added as a separate category. As of 1997, credit derivatives have been included in the sum of total derivatives in this chart.

Note: numbers may not add due to rounding.

* Note that the trading revenue figures above are for cash and off-balance sheet activities. Revenue figures are for each quarter alone, not year-to-date.

* Note: The third quarter 1996 Call Report reflected the merger between Chase and Chemical. The third quarter 1999 Call Report reflected the merger between Bank of America and NationsBank. The fourth quarter 1999 Call Report reflected the merger between First Chicago and Banc One. Prior quarters include the sum of Chase and Chemical Banks, as well as the sum of Bank of America and NationsBank's trading figures for comparison purposes. However, prior quarters for Banc One reflect First Chicago's data.

Note: Currently, the Call Report does not differentiate credit derivatives by contract type. Credit derivatives have been included in the sum of total derivatives here.

Note: Before the first quarter of 1995 total derivatives included spot foreign exchange. Beginning in the first quarter, 1995, spot foreign exchange was reported separately.

Note: Numbers may not add due to rounding.

OTHER 396 COMMERCIAL BANKS & TCs WITH DERIVATIVES			\$1,858,019	\$290,358	\$2,135	\$1,950	\$4,085	N/A
TOTAL AMOUNTS FOR ALL 421 BKS & TCs WITH DERIVATIVES			\$4,781,001	\$38,313,994	\$140,768	\$258,761	\$399,529	6.31
Commercial banks also hold on-balance sheet assets in volumes that are multiples of bank capital. For example:								
			EXPOSURE TO RISK BASED CAPITAL:					
EXPOSURES FROM OTHER ASSETS			ALL COMMERCIAL BANKS					
ALL COMMERCIAL BANKS			ALL BANKS					
1-4 FAMILY MORTGAGES			155%					
C&I LOANS			176%					
SECURITIES NOT IN TRADING ACCOUNT			179%					
Note: The numbers reported above for future credit exposures reflect gross add-ons.								
Note: The total credit exposure to capital ratio is calculated using risk based capital (tier one plus tier two capital).								
Note: Currently, the Call Report does not differentiate credit derivatives by contract type. Credit derivatives have been included in the sum of total derivatives here.								
Note: Before the first quarter of 1995 total derivatives included spot foreign exchange. Beginning in the first quarter, 1995, spot foreign exchange was reported separately.								
Note: Numbers may not add due to rounding.

TOTAL AMOUNTS FOR ALL 421 BKS & TCs WITH DERIVATIVES			\$4,781,001	\$37,935,408	\$9,827,639	\$9,338,996	\$5,359,990	\$24,526,625	\$4,338,761	\$567,603	\$282,977	\$5,189,340

Note: Currently, the Call Report does not include maturity breakouts for credit derivatives. Credit derivatives have been excluded from the sum of total derivatives here.

Note: Before the first quarter of 1995 total derivatives included spot foreign exchange. Beginning in the first quarter, 1995, spot foreign exchange was reported separately.

Note: Figures above exclude foreign exchange contracts with an original maturity of 14 days or less, futures contracts, written options, basis swaps, and any contracts not subject to risk-based capital requirements.

Therefore, the total notional amount of derivatives by maturity will not add to the total derivatives figure in this table.

Note: Numbers may not add due to rounding.
