

Further Investigations of the Multiple Knife-Edge Attenuation Function

L.E. Vogler

U.S. DEPARTMENT OF COMMERCE
Malcom Baldrige, Secretary

Susan G. Stuebing, Acting Assistant Secretary
for Communications and Information

May 1983

TABLE OF CONTENTS

	<u>Page</u>
ABSTRACT	1
1. INTRODUCTION	1
2. THE FRESNEL-KIRCHHOFF DERIVATION	2
3. ELIMINATION OF CHANGEOVER VALUES	9
4. DISCUSSION	15
5. SUMMARY	22
6. REFERENCES	22

LIST OF FIGURES

	<u>Page</u>
Figure 1.	Geometry for multiple knife-edge diffraction. 3
Figure 2.	Comparison of attenuation by programs FAMKE and PAMKE for a four knife-edge path as receiver height is varied. 13
Figure 3.	Comparison of attenuation by programs FAMKE and PAMKE for a five knife-edge path in which all θ 's are equal. 14
Figure 4.	Attenuation for the same five knife-edge path as in Figure 3 (all θ 's equal). Comparisons are shown for MKE, GTD, and the approximations of Epstein-Peterson and of Deygout. 21
