All Experimenters' Meeting

October 24, 2005

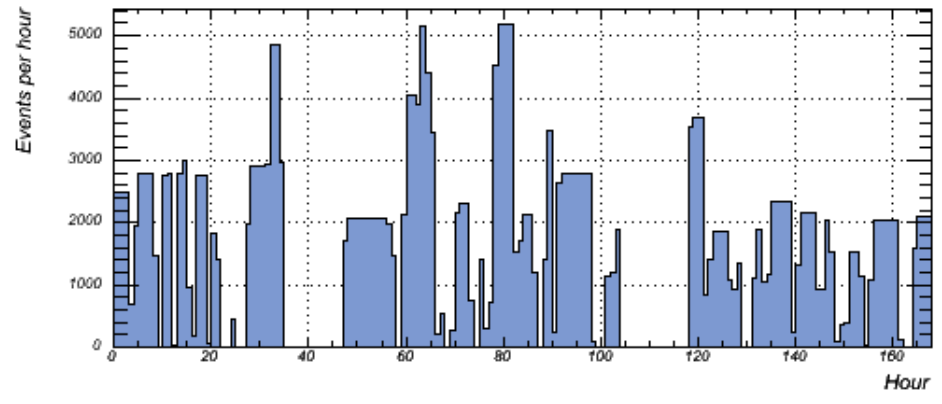

News & Status

- Last week we finished our -59 GeV data taking at 750,000 triggers.
- Switched over to +20 GeV/c tagged protons, pions and kaon beams.
- All still on the Liquid Hydrogen target with 20% empty target runs:
 - Last week we had 259906 events in 3045 spills.
- Beam quality stable, at a rate of one spill every 2 minutes, and sometimes at 1 spill every minute.
- No major down times in the last week due to Accelerator issues
- No detectors problems in the last week
- No Data Acquisition problems in the last week

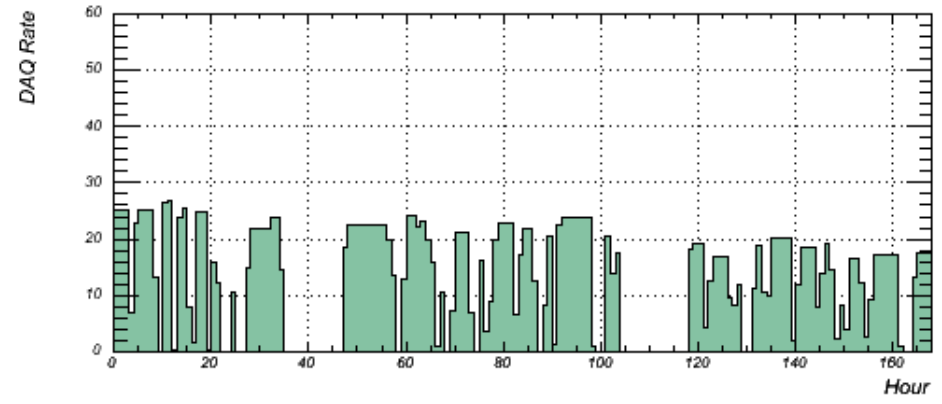

2005-10-17

2005-10-17

2005-10-17

Future plans for this week and next are:

- Take +20 GeV/c beam on LH2 target until we get 500,000 triggers, will not be this week.
- Plan to then switch to negative 20 GeV/c beam.
