Reactor Moderator:	LIGHT WATER	(Worst Case)
Fuel Cladding:	SST	SST/Inconel
BOL HM Constituents:	PuO2-UO2	U, Th, & Pu
BOL Enrichment %:		0 to 100

Basis for Parameter Differences:
This Template was used for the following reasons:
This fuel didn't closely match any existing templates, therefore the worst case template was used.

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		66.525
Bounding:		66.525

Basis for burnup used in estimate:
Nominal burnup set equal to bounding burnup.
Bounding burnup estimated by assuming BOL heavy metal mass was twice EOL.

Template Selection Summary

Reactor Moderator:	LIGHT WATER	LIGHT WATER
Fuel Cladding:	ZIRC-2	SST
BOL HM Constituents:	UO2	U
BOL Enrichment %:	93.00000016	60 to 100

Basis for Parameter Differences:
This Template was used for the following reasons:
This fuel matches Pathfinder Template on all but one parameter (cladding, but substituting Stainless Steel is a good conservative assumption).

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		111,247.369
Bounding:		222,494.739

Basis for burnup used in estimate:
Nominal burnup calculated from the heavy metal mass destroyed.
Bounding burnup assumed to be twice nominal burnup.

III. Template Selection Summary, Burnup Summary, and Checks

Template Selection Summary

	From SFD	Used
Reactor Moderator:	ORGANIC	HEAVY WATER
Fuel Cladding:	ALUM (1100)	ALUM
BOL HM Constituents:	U-Mo	U
BOL Enrichment %:	5.146443515	10 to 20

Basis for Parameter Differences:
This Template was used for the following reasons:
This fuel matches on cladding and BOL heavy metal, heavy water is a conservative assumption for moderator, and it is fairly close on enrichment.

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		45.432
Bounding:		90.864

Basis for burnup used in estimate:
Nominal burnup assumed to be 2% of BOL heavy metal mass.
Bounding burnup assumed to be twice nominal burnup.

Checks

	Burnup Multiplier	Estimated Burnup/ Given Burnup
Nominal:	0.43	
Bounding:	0.87	

Estimated EOL HM/Given EOL HM: 0.98

[1]Reactor shutdown, core removal, storage, shipping or other date confirming that irradiation ceased for fuel.

[2]Total burnup for all fuel associated with this worksheet must be divided by BOL heavy metal mass to get specific burnup values (MWd/MT).

Fuel Cladding:	SST (316)	SST/Inconel
BOL HM Constituents:	PuO2-UO2	U, Th, & Pu
BOL Enrichment %:		0 to 100

Basis for Parameter Differences:
This Template was used for the following reasons:
This fuel didn't closely match any existing templates, therefore the worst case template was used.

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		7,639.694
Bounding:		7,639.694

Basis for burnup used in estimate:
Nominal burnup set equal to bounding burnup.
Bounding burnup estimated by assuming BOL heavy metal mass was twice EOL.

Checks

	Burnup Multiplier	Estimated Burnup/ Given Burnup
Nominal:	14.21	
Bounding:	14.21
