Fuel Cladding:	SST	SST/Inconel
BOL HM Constituents:	PuO2-UO2	U, Th, & Pu
BOL Enrichment %:		0 to 100

Basis for Parameter Differences:
This Template was used for the following reasons:
This fuel didn't closely match any existing templates, therefore the worst case template was used.

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		66.525
Bounding:		66.525

Basis for burnup used in estimate:
Nominal burnup set equal to bounding burnup.
Bounding burnup estimated by assuming BOL heavy metal mass was twice EOL.

Fuel Cladding:	ALUM (1100)	ALUM
BOL HM Constituents:	U-Mo	U
BOL Enrichment %:	5.146443515	10 to 20

Basis for Parameter Differences:

This Template was used for the following reasons:
This fuel matches on cladding and BOL heavy metal, heavy water is a conservative assumption for moderator, and it is fairly close on enrichment.

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		45.432

Basis for burnup used in estimate:

Nominal burnup assumed to be 2% of BOL heavy metal mass.
Bounding burnup assumed to be twice nominal burnup.

BOL HM Constituents:	PuO2-UO2	U, Th, & Pu
BOL Enrichment %:		0 to 100

Basis for Parameter Differences:
This Template was used for the following reasons:
This fuel didn't closely match any existing templates, therefore the worst case template was used.

Burnup Summary (MWd)[2]

	From SFD	Estimated
Nominal:		7,639.694
