

## NEVADA BLM SENSITIVE SPECIES

**SENSITIVE SPECIES** are taxa that are not already included as BLM Special Status Species under (1) Federally listed, proposed, or candidate species; or (2) State of Nevada listed species. BLM policy is to provide these species with the same level of protection as is provided for candidate species in BLM Manual 6840.06 C, that is to “ensure that actions authorized, funded, or carried out do not contribute to the need for the species to become listed”. The Sensitive Species designation is normally used for species that occur on Bureau administered lands for which BLM has the capability to significantly affect the conservation status of the species through management. The BLM Manual 6840.06 E provides factors by which a native species may be listed as “sensitive” if it:

- 1. Could become endangered or extirpated from a state, or within a significant portion of its range in the foreseeable future;**
- 2. Is under status review by the FWS and/or National Marine Fisheries Service;**
- 3. Is undergoing significant current or predicted downward trends in: (1) habitat capability that would reduce a species’ existing distribution; and/or (2) population or density such that federally listed, proposed, candidate, or State listed status may become necessary.**
- 4. Typically consists of small and widely dispersed populations;**
- 5. Inhabits ecological refugia, or specialized or unique habitats;**
- 6. Is State-listed, but which may be better conserved through application of BLM sensitive species status.**
