**Subject:** Baseline: REMI Policy Insight Version 9, Last History Year 2004

QA:N/A

Attached is the new Economic-Demographic baseline for Nevada. This baseline, an alternative regional control forecast for the YMP REMI *Policy Insight* model, will be used to compare changes for the Rail Transportation EIS. The Policy Insight model is Version 9, with a last history year of 2004. This is the latest version of the model, received just prior to the Christmas holidays.

The baseline has been developed using the employment update module and using information from the latest Clark County population projections prepared by UNLV and information from the latest population projections developed by the Nevada State Demographer. The baseline has been modified to match those population projections as far as they go. Projections for the REMI model extend only until 2050. These projections are extended to 2075, using constant growth rates for all output variables after 2050. Source data and major assumptions are identified in the readme tab of the spreadsheet.

It is noted that there will need to be one final adjustment to the output. The three economic measures (Real Disposable Personal Income, Gross Regional Product, and State and Local Government Spending) are all provided in terms of Billions of fixed 2000 dollars. These will need to be adjusted to a more recent year, however, that year has not yet been decided. Direction from DOE is forthcoming.

All population and employment data are provided in thousands.

If you have any questions, please call at 702-821-7222.

John

**This is the Baseline Forecast for Nevada to be used in the Draft NEPA documents for the Rail Alignment EIS and the Supplemental Repository EIS**  
draft documents developed in 2007.

**This baseline data is developed using REMI Policy Insight Version 9.0, Last History Year 2004.**

This model is an 8 geographic region, 70 sector model for Nevada.

**The update included an Employment Update using employment data from the NV Department of Employment, Training and Rehabilitation (DETR).**

2004 - 2005 DETR data came from the annual reports entitled Nevada Employment and Payrolls.

2006 Data came from the report entitled 2006 Nevada Covered Employment, and covered the months of January - March, 2006.

**Population target data are based on NV Demographer's Office projections to 2026, except for Clark County.**

Clark County projections are based on UNLV Center for Business and Economic Research (CBER) projections to 2035.

Economic migration is changed from the "Out of the Box" formulation to make population in the

REMI Alt Control Forecast (baseline) match the target population.

Projections of population to 2075 are made assuming a constant rate of growth from the end of each state or local projection.

Assuming a constant rate of growth will establish a higher population than would normally be expected, as the normal expectation is for growth to increase at a decreasing rate. However, as the projections are also to be used for predicting health and safety impacts, the assumption of a larger population is a conservative assumption.

Projections after 2050 for all other variables are made by assuming the constant growth rate that is used for the population projections, as discussed above, except that the results for All Nevada after 2050 are the sum of the 8 geographic regions
