per 100 Million Vehicle Miles Traveled, 1988-2005 24

Introduction

This annual edition of *Large Truck Crash Facts* contains descriptive statistics about fatal, injury, and property damage only crashes involving large trucks in 2005. Selected crash statistics on passenger vehicles are also presented for comparison purposes.

Data Sources

The information in this report was compiled by the Analysis Division of the Federal Motor Carrier Safety Administration (FMCSA). The major sources for the data are described below:

- ◆ **Fatality Analysis Reporting System (FARS).** FARS, maintained by the National Highway Traffic Safety Administration (NHTSA), is a census of fatal crashes involving motor vehicles traveling on public trafficways. FARS is recognized as the most reliable national crash database, but it contains information only on fatal crashes. A large truck is defined in FARS as a truck with a gross vehicle weight rating (GVWR) of more than 10,000 pounds.
- ◆ **General Estimates System (GES).** GES, also maintained by NHTSA, is a probability-based nationally representative sample of all police-reported fatal, injury, and property damage only crashes. The data from GES yield national estimates, calculated using a weighting procedure, but cannot give State-level estimates. Also, GES is a sample of motor vehicle crashes, and the results generated are estimates. For this reason, all GES data shown in this report are rounded to the nearest thousand. The GES definition of a large truck is the same as the FARS definition.
- ◆ **Motor Carrier Management Information System (MCMIS) Crash File.** The MCMIS Crash File, maintained by FMCSA, contains data on trucks and buses in crashes that meet the National Governors' Association (NGA)/SAFETYNET recommended threshold. An NGA/SAFETYNET reportable crash must involve a truck, used for commercial purposes, with a GVWR or gross combination weight rating greater than 10,000 pounds; or a commercial bus designed to transport more than eight people, including the driver. The crash must result in at least one fatality, at least one injury involving immediate medical attention away from the crash scene, or at least one vehicle disabled as a result of the crash and transported away from the crash scene. The crashes are reported by the States to FMCSA through the SAFETYNET computer software.

The MCMIS Crash File is intended to be a census of trucks and buses involved in fatal, injury and towaway crashes; however, some States do not report all FMCSA-eligible crashes. For 2005, States reported 145,286 trucks involved in crashes through SAFETYNET to the MCMIS Crash File. FMCSA continues to work with the States to improve data quality and reporting of all eligible large truck crashes to the MCMIS crash file.

FARS, GES, and MCMIS describe the events and details of motor vehicle crashes, but they do not include data on crash causation or fault.

- ◆ **Highway Statistics.** *Highway Statistics* is an annual publication of the Office of Highway Policy Information of the Federal Highway Administration (FHWA). State agencies report the data, ranging from driver licensing to highway finance, and FHWA aggregates them to get national totals. This report takes vehicle miles traveled and vehicle registrations from Table VM-1, "Annual Vehicle Distance Traveled in Miles and Related Data" of *Highway Statistics*.

Organization of the Report

This year's report is organized into four chapters: Trends, Crashes, Vehicles, and People. The Trends chapter shows data for 2005 in the context of available historical data for past years. In the other chapters, the 2005 data are shown in different ways, according to what is being counted. The Crashes chapter counts numbers of crashes; the Vehicles chapter counts vehicles in crashes; and the People chapter counts persons of all types involved in crashes. Four different types of counts are shown:

- ◆ **Crashes:** Numbers of crashes involving various vehicle types.
- ◆ **Vehicles in Crashes:** Numbers of vehicles involved in crashes. These counts may be larger than the number of crashes (fatal, injury, or property damage only), because more than one vehicle may be involved in a single crash.
- ◆ **People in Crashes:** Numbers of people killed or injured in crashes. These counts generally are larger than the number of crashes (fatal or injury), because more than one person may be killed or injured in a single crash. People killed or injured may be occupants of a truck, occupants of another vehicle, or nonmotorists (pedestrians or pedalcyclists).
- ◆ **Drivers in Crashes:** Numbers of vehicle drivers involved in crashes. These counts generally are equal to the numbers of vehicles involved in crashes.

Trends

The tables in this chapter present large truck crash statistics over time. Fatal crash statistics generally are available from 1975, the first year of FARS data, through 2005. In some cases, such as for roadway function class or alcohol involvement, data are available only from 1981 or 1982 through 2005. Nonfatal crash statistics are available from 1988, the first year of GES data, through 2005. The statistics shown in this chapter represent crashes, vehicles, drivers, fatalities, and injuries in crashes. Below is a summary of some of the trend information in this section:

- ◆ Over the past 20 years (from 1985 to 2005) there has been a 41-percent increase in registered large trucks and an 80-percent increase in miles traveled by large trucks.
- ◆ Over the same time period, the number of large trucks involved in fatal crashes has declined by 4 percent, and the vehicle involvement rate for large trucks in fatal crashes has declined by 47 percent.
- ◆ Over the past 10 years (from 1995 to 2005) there has been a 26-percent increase in registered large trucks and a 25-percent increase in miles traveled by large trucks.
- ◆ The number of large trucks involved in injury crashes has decreased by 1 percent over the past 10 years, and the vehicle involvement rate for large trucks in injury crashes has declined by 21 percent.
- ◆ The number of large trucks involved in property damage only crashes has increased by 22 percent over the past 10 years, and the vehicle involvement rate for large trucks in property damage only crashes has declined by 2 percent.
- ◆ Alcohol involvement (blood alcohol concentration of 0.01 gram per deciliter [g/dL] or more) for large truck drivers in fatal crashes has declined by 26 percent over the past 10 years.

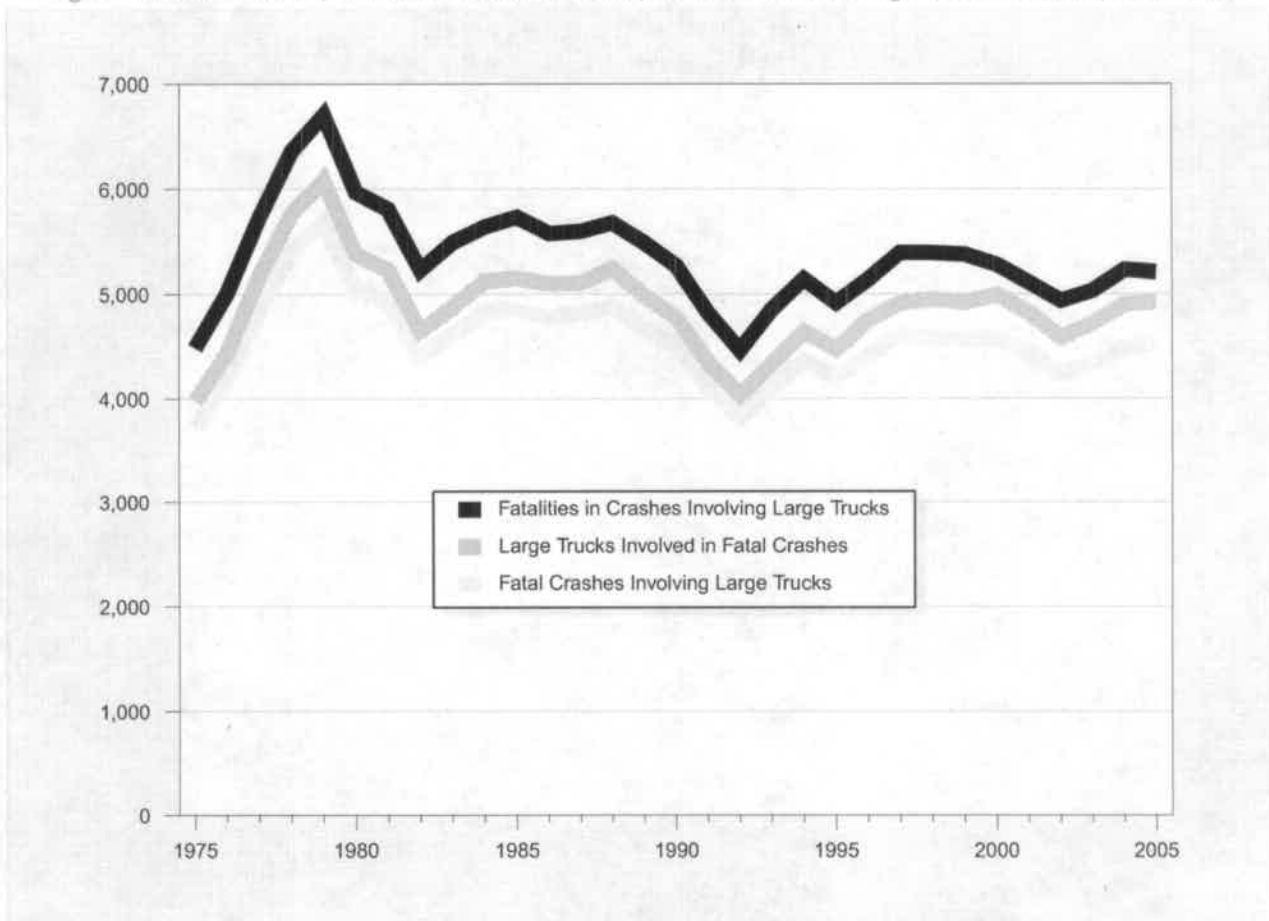

Table 1. Large Truck Fatal Crash Statistics, 1975-2005

Year	Fatal Crashes	Vehicles Involved	Occupant Fatalities	Total Fatalities	Million Vehicle Miles Traveled	Fatal Crashes per 100 Million Vehicle Miles Traveled	Vehicles Involved in Fatal Crashes per 100 Million Vehicle Miles Traveled	Fatalities per 100 Million Vehicle Miles Traveled	Large Trucks Registered

Notes: A passenger car is defined as a motor vehicle used primarily for carrying passengers, including convertibles, sedans, and station wagons. A light truck is defined as a truck with a gross vehicle weight rating (GVWR) of 10,000 pounds or less, including pickups, vans, truck-based station wagons, and sport utility vehicles. A large truck is defined as a truck with a gross vehicle weight rating (GVWR) greater than 10,000 pounds. A bus is defined as a large motor vehicle used to carry more than 10 passengers, including school buses, inter-city buses, and transit buses.

2005	22,757	24.6%	21.3%	4,652	34.1%	26.8%

Notes: Blood alcohol concentration (BAC) of 0.01 grams per deciliter (g/dL) or above (BAC=0.01+) indicates driver alcohol involvement. BAC of 0.08 g/dL or greater (BAC=0.08+) indicates driver intoxication. A large truck is defined as a truck with a gross vehicle weight rating (GVWR) greater than 10,000 pounds. A passenger car is defined as a motor vehicle used primarily for carrying passengers, including convertibles, sedans, and station wagons. A light truck is defined as a truck with a gross vehicle weight rating (GVWR) of 10,000 pounds or less, including pickups, vans, truck-based station wagons, and sport utility vehicles.

Note: A single-unit truck is defined as a medium or heavy truck in which the engine, cab, drive train, and cargo area are all on one chassis.

Sources: Vehicle Miles of Travel and Registered Vehicles: Federal Highway Administration. Fatal Crashes, Vehicles Involved, and Fatalities: National Highway Traffic Safety Administration, Fatality Analysis Reporting System (FARS).

Figure 7. Fatalities in Combination Truck, Single-Unit Truck, and Passenger Vehicle Crashes per 100 Million Vehicle Miles Traveled, 1975-2005

Notes: A combination truck is defined as a truck tractor pulling any number of trailers (including none) or a straight truck pulling at least one trailer. A single-unit truck is defined as a medium or heavy truck in which the engine, cab, drive train, and cargo area are all on one chassis. A passenger vehicle is defined as a car or light truck (including pickups, vans, and sport utility vehicles).
 Sources: Vehicle Miles of Travel: Federal Highway Administration. Fatal Crashes, Vehicles Involved, and Fatalities: National Highway Traffic Safety Administration, Fatality Analysis Reporting System (FARS).

Note: A single-unit truck is defined as a medium or heavy truck in which the engine, cab, drive train, and cargo area are all on one chassis. Sources: Vehicle Miles of Travel and Registered Vehicles: Federal Highway Administration. PDO Crashes and Vehicles Involved: National Highway Traffic Safety Administration, General Estimates System (GES).

Figure 8. Persons Injured in Combination Truck, Single-Unit Truck, and Passenger Vehicle Crashes per 100 Million Vehicle Miles Traveled, 1988-2005

Notes: "Persons Injured" includes all nonfatally injured persons in injury and fatal crashes. A combination truck is defined as a truck tractor pulling any number of trailers (including none) or a straight truck pulling at least one trailer. A single-unit truck is defined as a medium or heavy truck in which the engine, cab, drive train, and cargo area are all on one chassis. A passenger vehicle is defined as a car or light truck (including pickups, vans, and sport utility vehicles).
 Sources: Vehicle Miles of Travel: Federal Highway Administration. Injury Crashes, Vehicles Involved, and Injuries: National Highway Traffic Safety Administration, General Estimates System (GES).

Crashes

This chapter contains information on the circumstances of large truck crashes. Below is a summary of some of the information in this section:

- ◆ Of the 423,000 police-reported crashes involving large trucks in 2005, 4,533 (1 percent) resulted in at least one fatality, and 78,000 (18 percent) resulted in at least one nonfatal injury.
- ◆ Single-vehicle crashes made up 19 percent of all fatal crashes, 14 percent of all injury crashes, and 30 percent of all property damage only crashes involving large trucks.
- ◆ Just over three-fifths (61 percent) of all fatal crashes involving large trucks occurred on rural roads, and more than one-fourth (26 percent) occurred on Interstate highways.
- ◆ One-third (33 percent) of all fatal crashes and one-fifth (20 percent) of all property damage only crashes involving large trucks occurred at night.
- ◆ The vast majority of fatal crashes (85 percent) and of nonfatal crashes (88 percent) involving large trucks occurred on weekdays (Monday through Friday).
- ◆ Collision with a vehicle in transport was the first harmful event in 76 percent of fatal crashes involving large trucks.
- ◆ Rollover was the first harmful event in only 5 percent of all fatal crashes involving large trucks and in only 2 percent of all nonfatal crashes involving large trucks.

Crashes

Vehicles

This chapter presents information on large trucks involved in fatal, injury, and property damage only crashes. Some of the data in this chapter come from the MCMIS Crash File, which contains data on trucks and buses in crashes that meet the National Governors' Association (NGA)/SAFETYNET recommended threshold. MCMIS data are used for the tables on vehicle configuration (Table 37), crashes by cargo body type (Table 38), gross vehicle weight rating (Table 39), and hazardous materials (Tables 40 and 41). NGA/SAFETYNET nonfatal crashes tend to be more serious than GES nonfatal crashes, because the NGA/SAFETYNET threshold requires at least one injury involving immediate medical attention away from the crash scene, or at least one vehicle disabled as a result of the crash and transported away from the crash scene. Below is a summary of some of the vehicle information in this section:

- ◆ In 2005, 4,932 large trucks were involved in fatal crashes, 82,000 were involved in injury crashes, and 354,000 were involved in property damage only crashes.
- ◆ Large trucks made up 8 percent of all vehicles in fatal crashes, 3 percent of all vehicles in injury crashes, and 5 percent of all vehicles in property damage only crashes.
- ◆ Hazardous materials (HM) placards were present on 4 percent of the large trucks involved in fatal crashes and 2 percent of those in nonfatal crashes. HM was released from the cargo compartments of 13 percent of the placarded trucks.
- ◆ "Collision with motor vehicle in transport" was recorded as the most harmful event for 76 percent of the large trucks involved in fatal crashes.
- ◆ Singles (truck tractors pulling a single semi-trailer) accounted for 62 percent of the large trucks involved in fatal crashes. Doubles (tractors pulling two trailers) made up 3 percent of the large trucks involved in fatal crashes. Triples (tractors pulling three trailers) accounted for 0.1 percent of all large trucks involved in fatal crashes in 2005.

Table 37. Large Trucks in Crashes by Vehicle Configuration

Vehicle Configuration	Fatal		Injury		Towaway

Total	4,932	100.0%	60,828	100.0%	79,340	100.0%

Notes: A large truck is defined here as a truck, used for commercial purposes, with a gross vehicle weight rating (GVWR) or gross combination weight rating greater than 10,000 pounds. Injury crashes are defined here as crashes that resulted in at least one injury involving immediate medical attention away from the crash scene. (Note that this definition of an injury crash is not the same as that used in the GES injury estimates presented in other tables of this report.) Towaway crashes are defined here as crashes in which at least one vehicle was disabled as a result of the crash and transported away from the crash scene.

Sources: Fatal Crashes: National Highway Traffic Safety Administration, Fatality Analysis Reporting System (FARS). Injury and Towaway Crashes: Federal Motor Carrier Safety Administration, MCMIS Crash File.

People

This chapter contains information on drivers of large trucks in fatal, injury, and property damage only crashes and on people killed or injured in large truck crashes. Some statistics are also listed for passenger vehicle drivers in order to make comparisons. It is important to note that the number of large truck drivers in crashes is not exactly equal to the number of large trucks in crashes, because no driver information is provided for some crashes. Below is a summary of some of the information in this section:

- ◆ Fatalities in crashes involving large trucks made up 12 percent of all fatalities in motor vehicle crashes in 2005.
- ◆ Injuries in large truck crashes made up 4 percent of all injuries in motor vehicle crashes in 2005.
- ◆ Of the 4,881 drivers of large trucks involved in fatal crashes, 281 (about 6 percent) were 25 years of age or younger, and 154 (about 3 percent) were 66 years of age or older. In comparison, 13,923 (29 percent) of the 47,665 drivers of passenger vehicles in fatal crashes were 25 years of age or younger, and 5,440 (about 11 percent) were 66 years of age or older.
- ◆ About 3 percent of all the drivers of large trucks involved in fatal crashes were female, as compared with 30 percent of all drivers of passenger vehicles involved in fatal crashes.
- ◆ One or more driver-related factors were recorded for 70 percent of the drivers of large trucks involved in single-vehicle fatal crashes but only for 32 percent of the drivers of large trucks involved in multiple-vehicle fatal crashes.
- ◆ Of the 4,881 drivers of large trucks involved in fatal crashes, 725 (15 percent) were not wearing a safety belt at the time of the crash; of those, 21 percent were completely or partially ejected from the vehicle.

Table 47. Persons Killed and Injured in Crashes Involving Large Trucks

Person Type	Single-Vehicle Crashes		Multiple-Vehicle Crashes		Total
