

## Development of a Reliable Population Index for Band-tailed Pigeons

Michael L. Casazza, Julie L. Yee, Dennis L. Orthmeyer,  
and Michael R. Miller, Western Ecological Research Center

## Cooperators:

- **U.S. Fish and Wildlife Service - Webless Migratory Game Bird Program**
- **California Department of Fish and Game**
- **Oregon State University**
- **Oregon Department of Fish and Wildlife**
- **Washington Department of Fish and Wildlife**
- **Canadian Wildlife Service**

## **Existing Survey Data:**

- ✓ Breeding Bird Survey Data (BBS Data)
- ✓ Call-Count Routes in Washington State (WACC)
- ✓ Mineral Site Counts in Oregon and WA (WAORMS)

## Objectives:

- Statistical power analysis of existing survey methods.
- Examine potential means of augmenting existing surveys to yield more powerful estimates of relative abundance of BTP.
- **Develop methodology for Pacific Coast mineral site survey.**

# Historical Surveys:

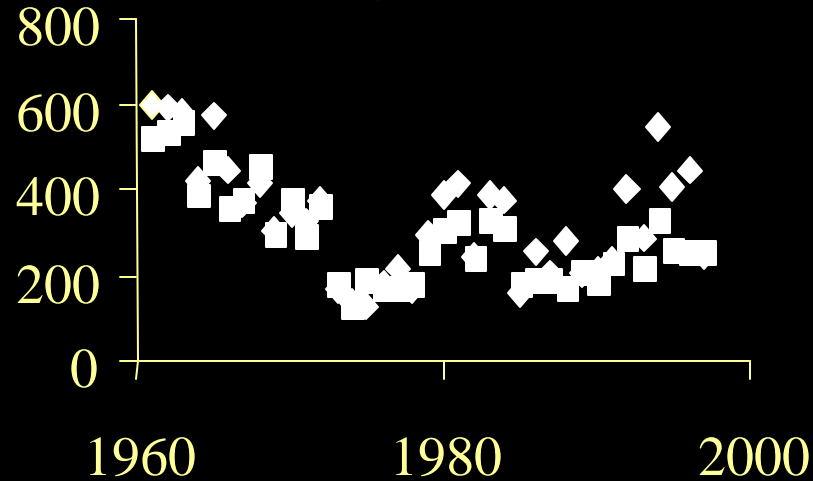

## Pacific BBS

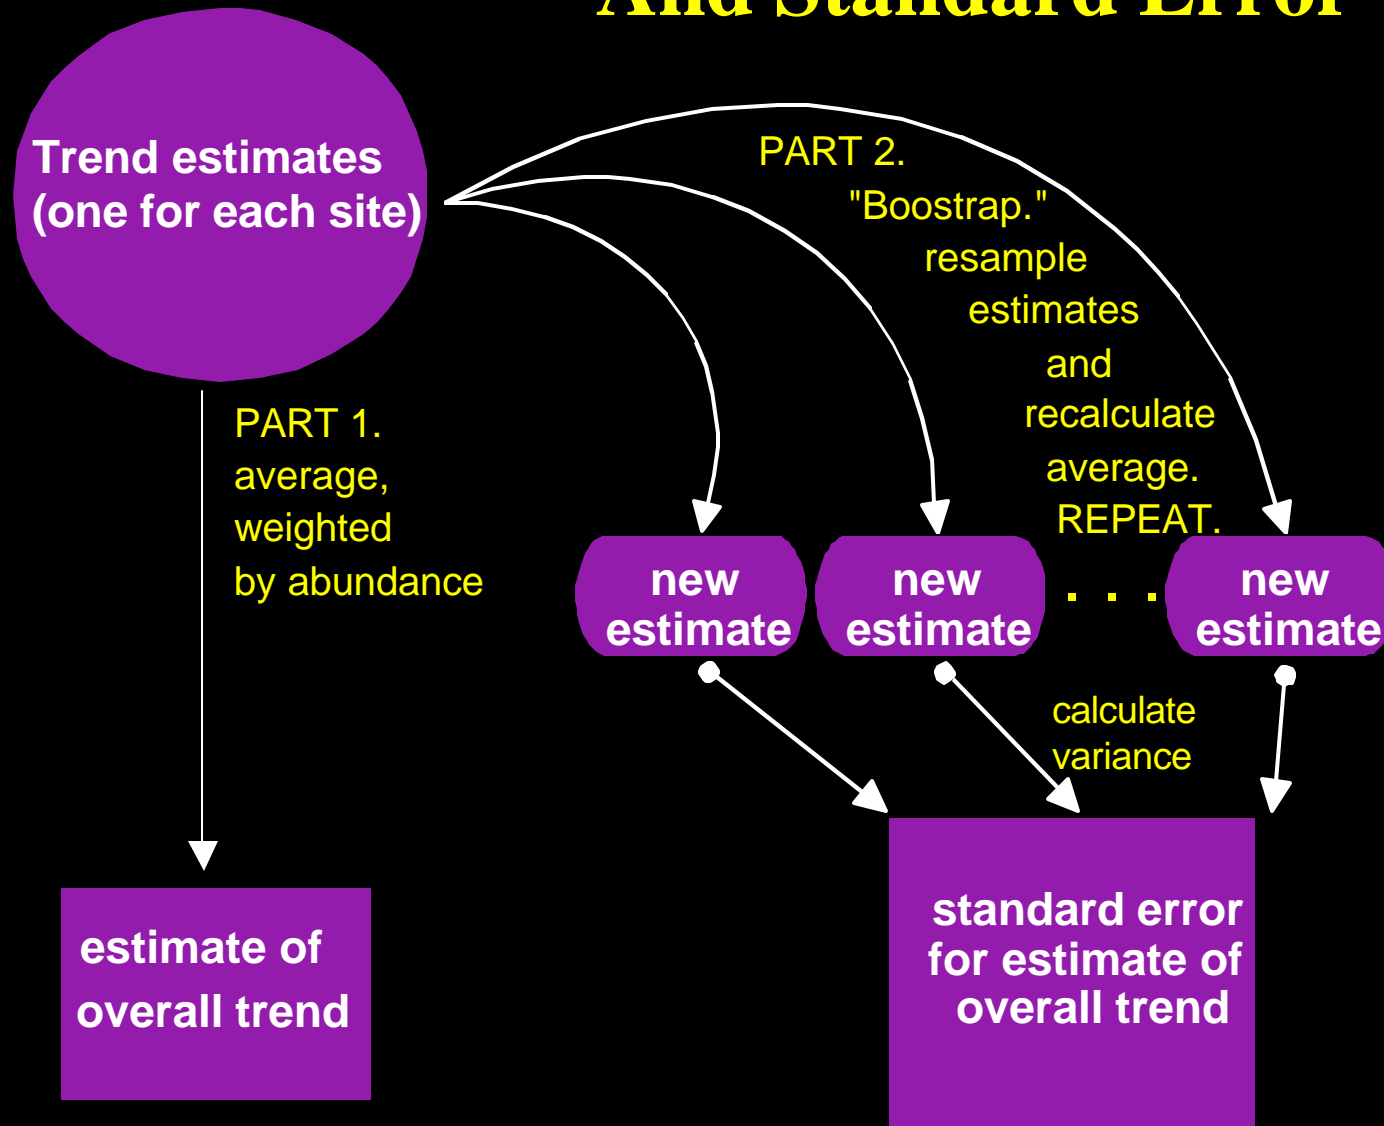

## WA call count

## WA and OR mineral sites

# Estimates of Overall Trend And Standard Error

## Population trend model :

$$\log(Y_t) = a + bt + \text{error}$$

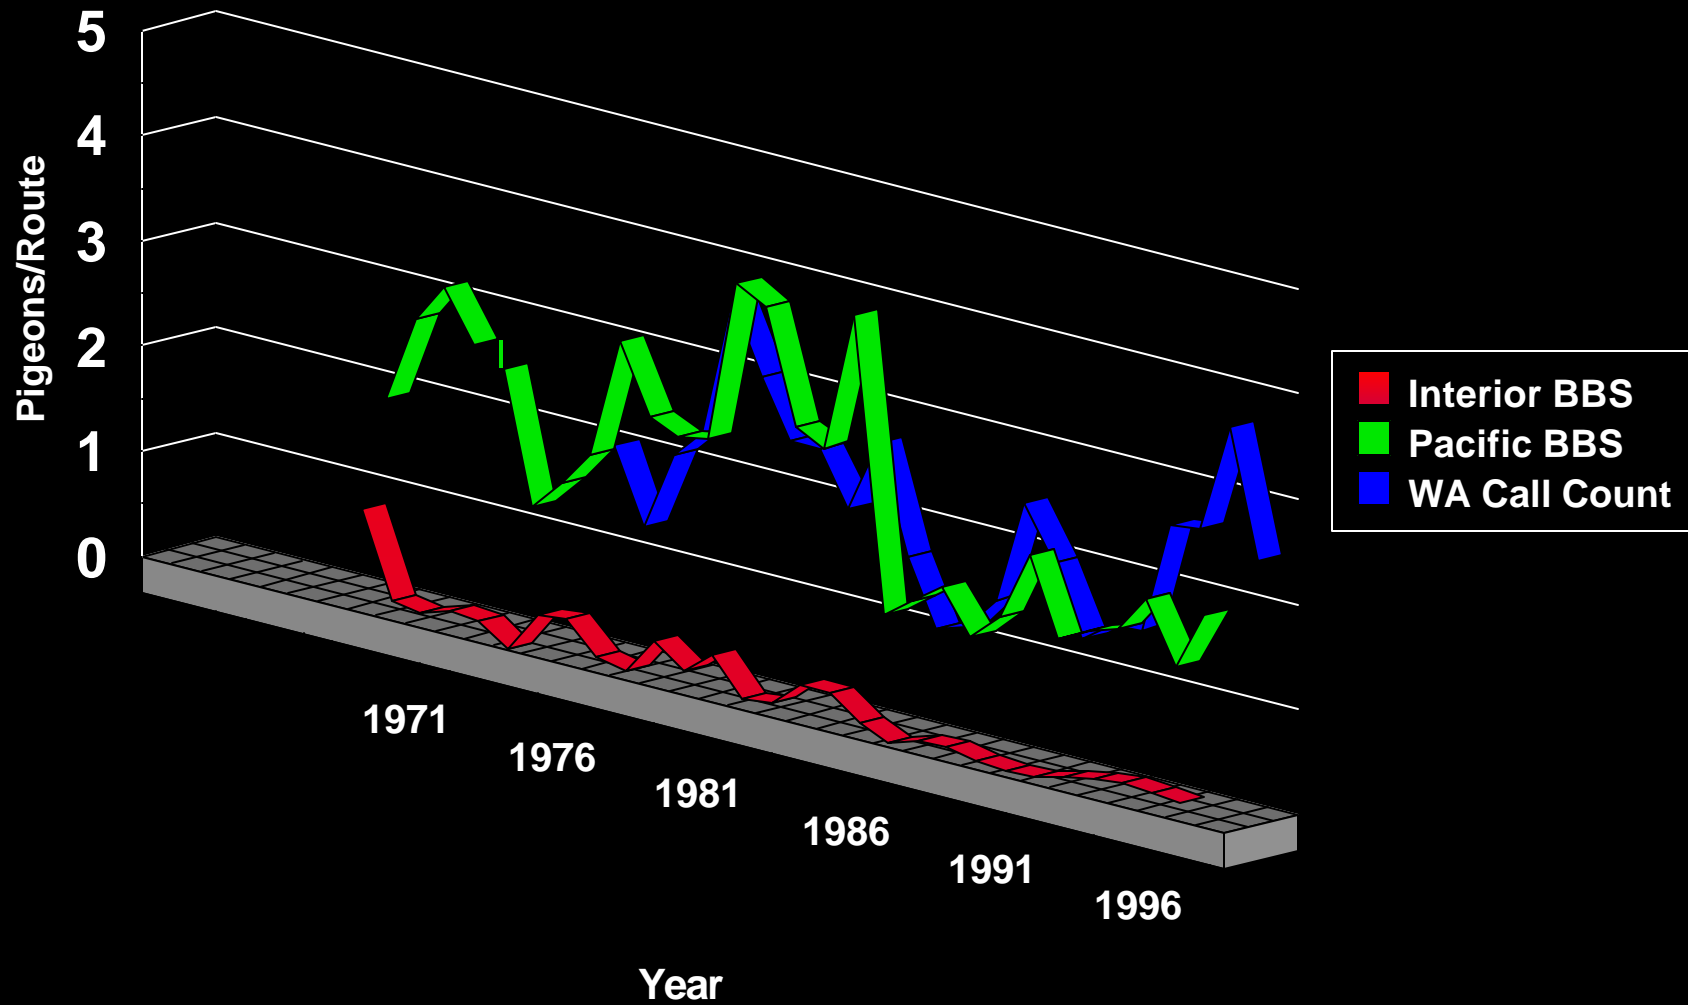

where  $Y_t$  is the relative abundance at time  $t$ .

$$\Rightarrow Y_t / Y_{t-1} = \exp(b) + \text{error}$$

$$\Rightarrow \text{Annual percent change} := \exp(b) - 1$$

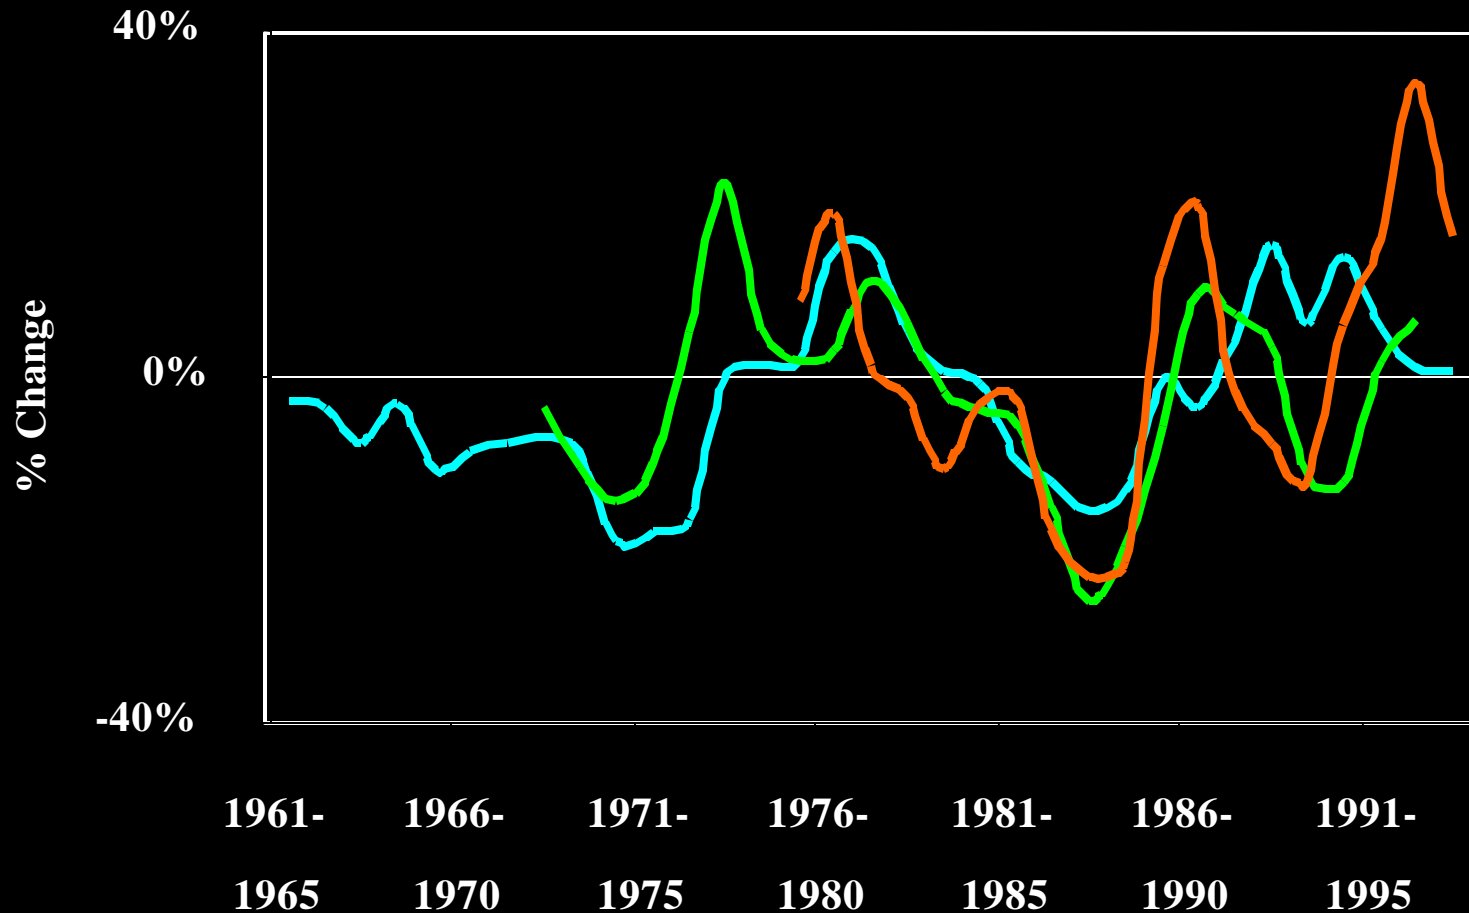

# Band-tailed Pigeon Population Indices - Route Data

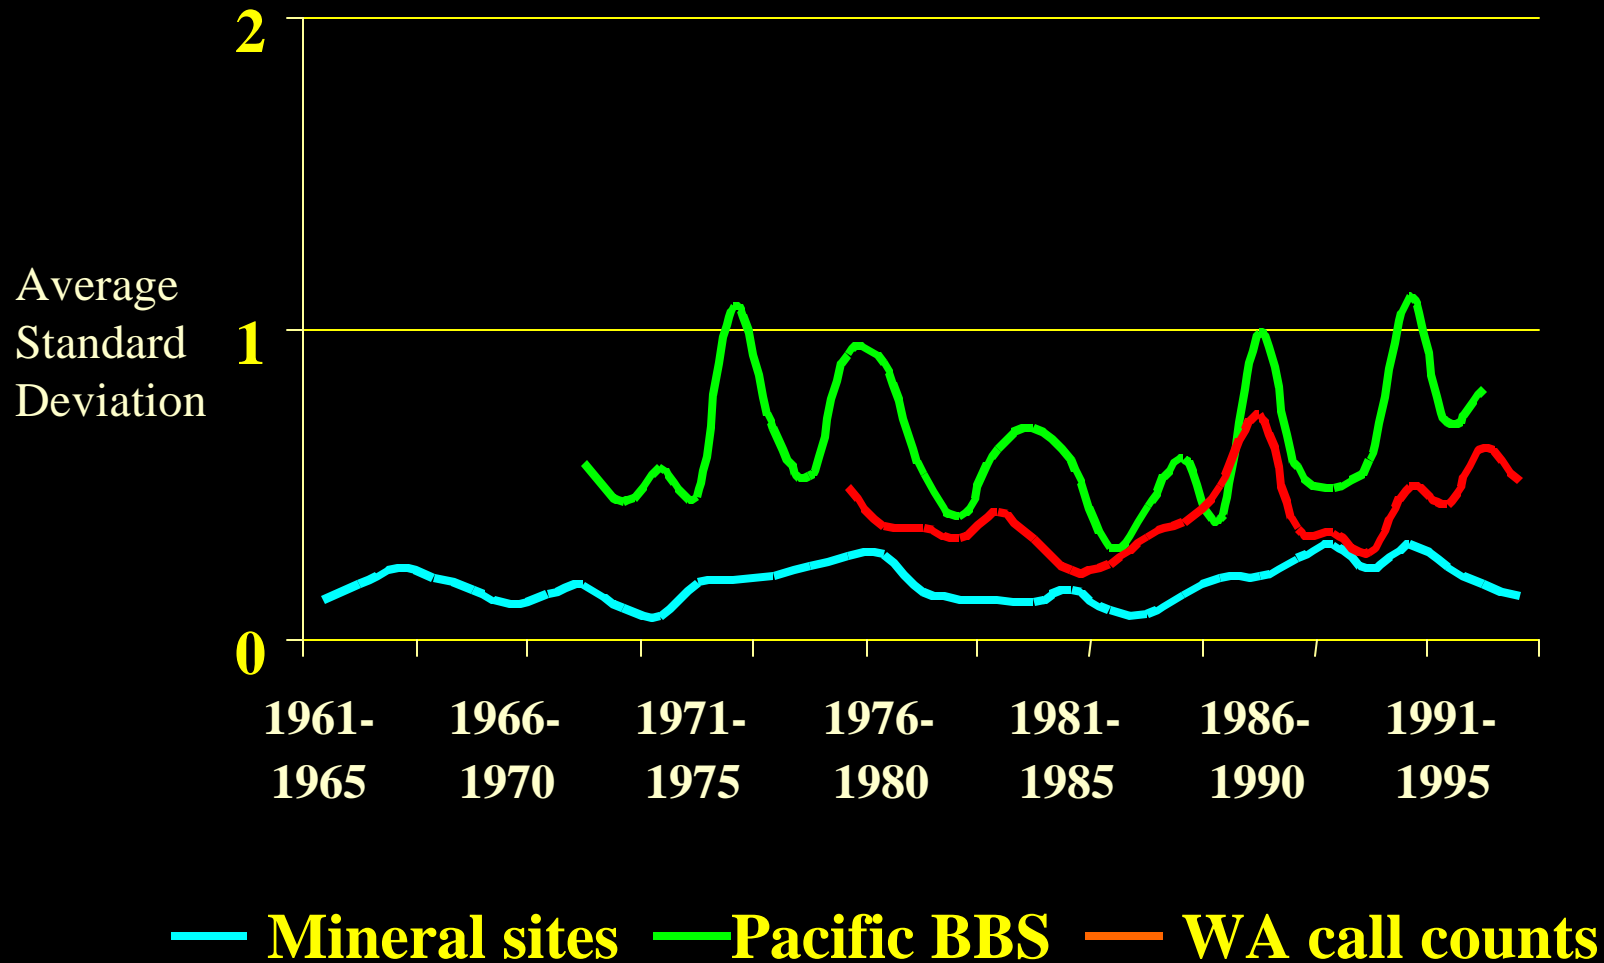

## Population Trend Estimates 1961-1995 (5-year intervals)

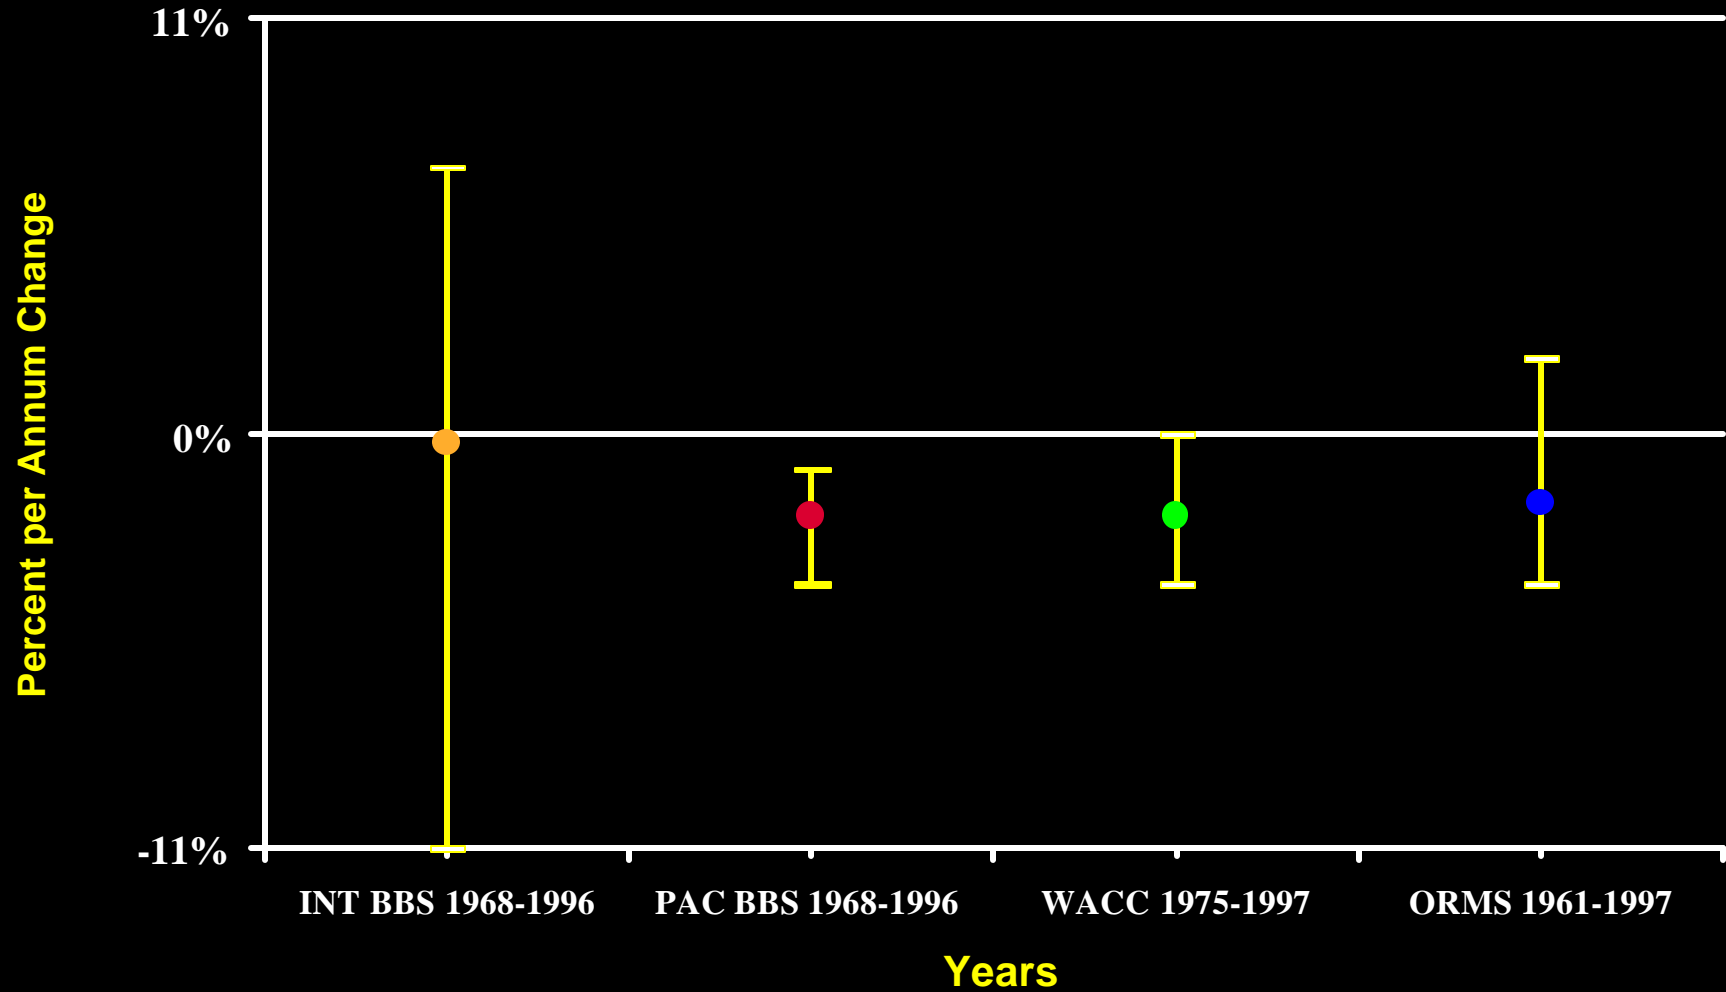

— Mineral sites — Pacific BBS — WA call counts

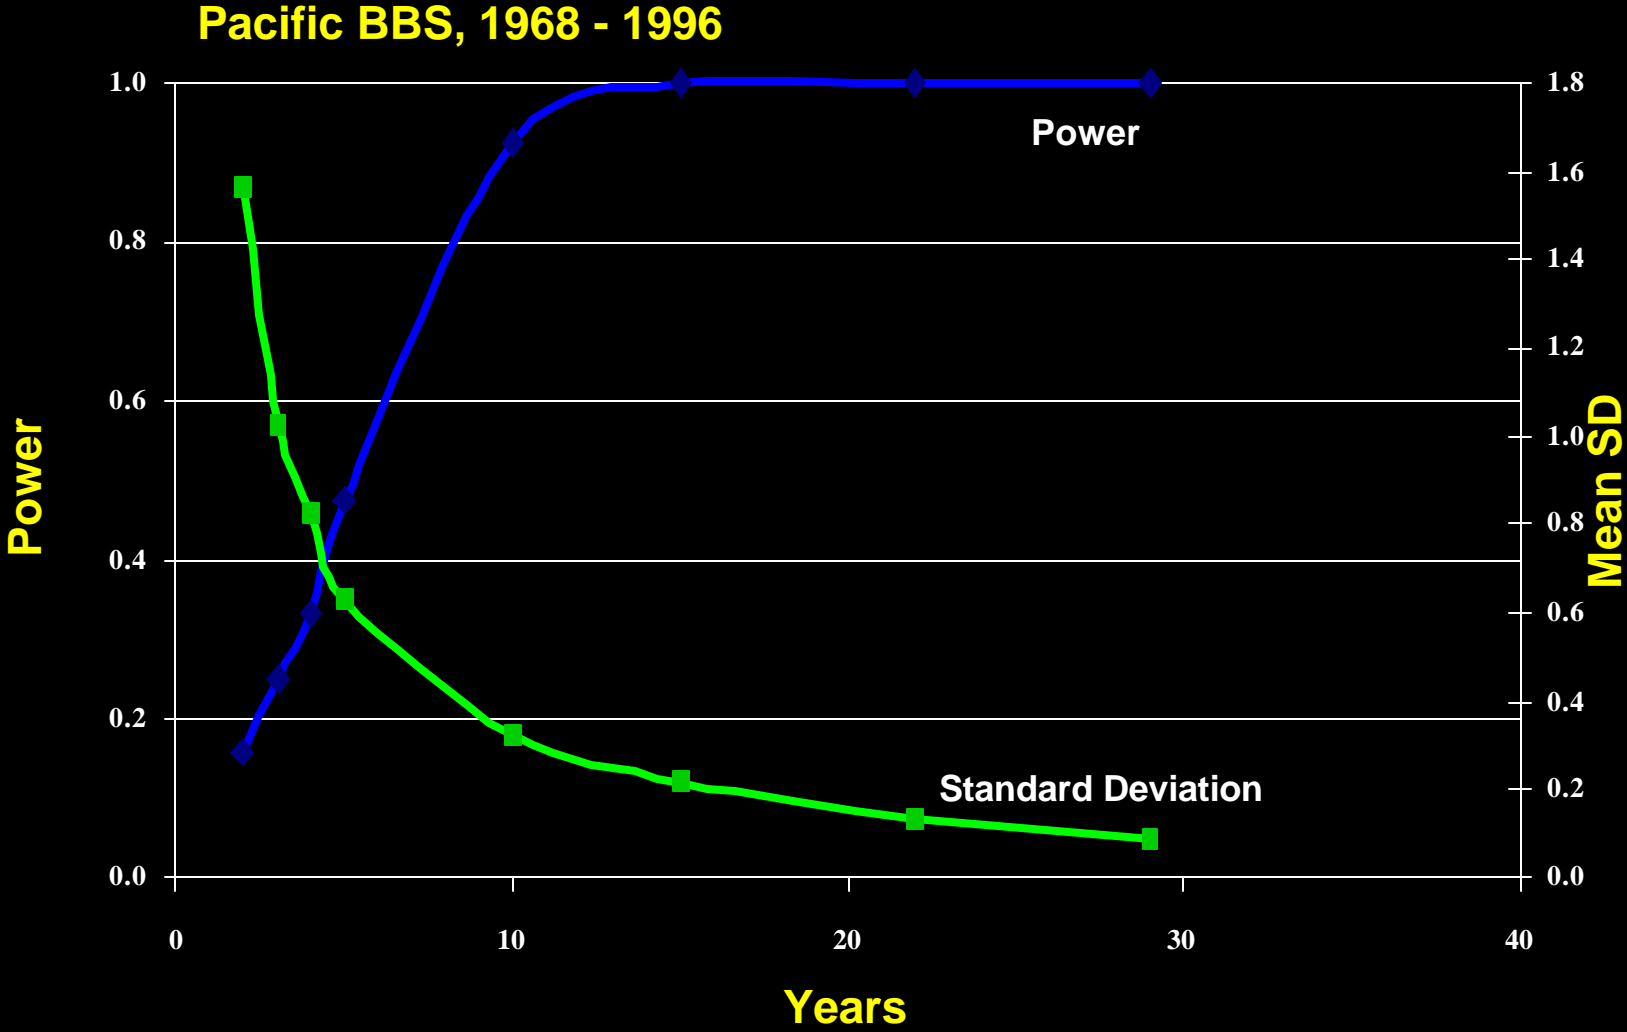

## Standard Deviation of Trend Estimates 1961–1995 (5 year intervals)

# Estimation of Long-Term Trends in Abundance for Band-tailed Pigeons

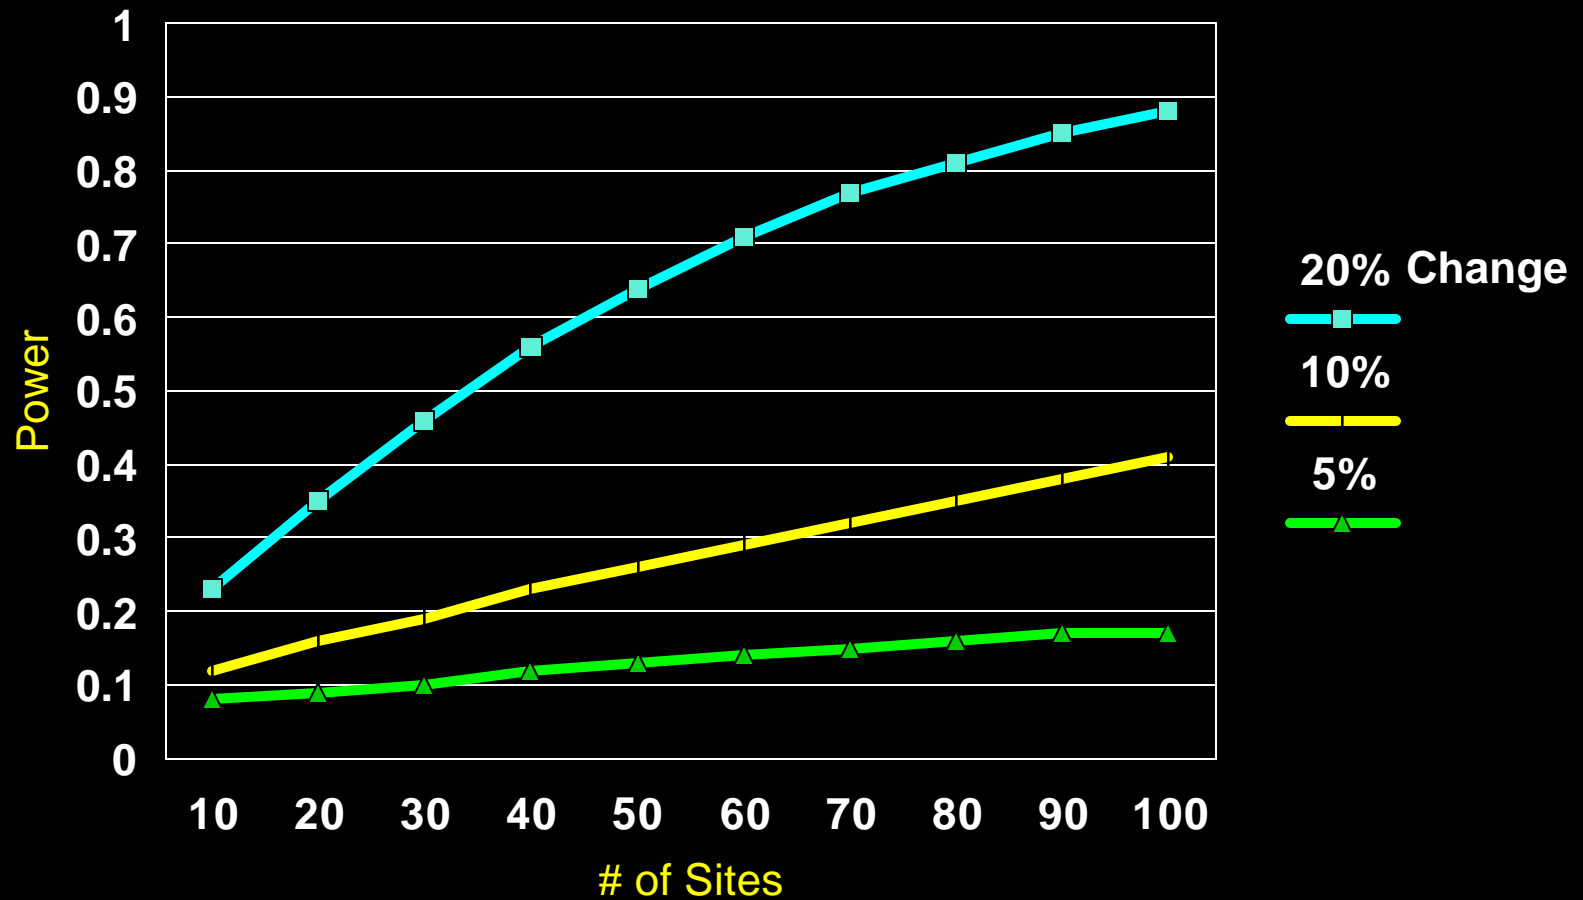

# The relationship between power and term duration for Pacific BBS routes.

# Estimated power for determining 3-year trends in abundance for band-tailed pigeons with the Pacific BBS Survey.

## Estimated power for determining 3-year trends in abundance for band-tailed pigeons on Washington call-count routes.

## Estimated power for determining 3-year trends in abundance for band-tailed pigeons at Washington and Oregon mineral sites.

## Sample Size:

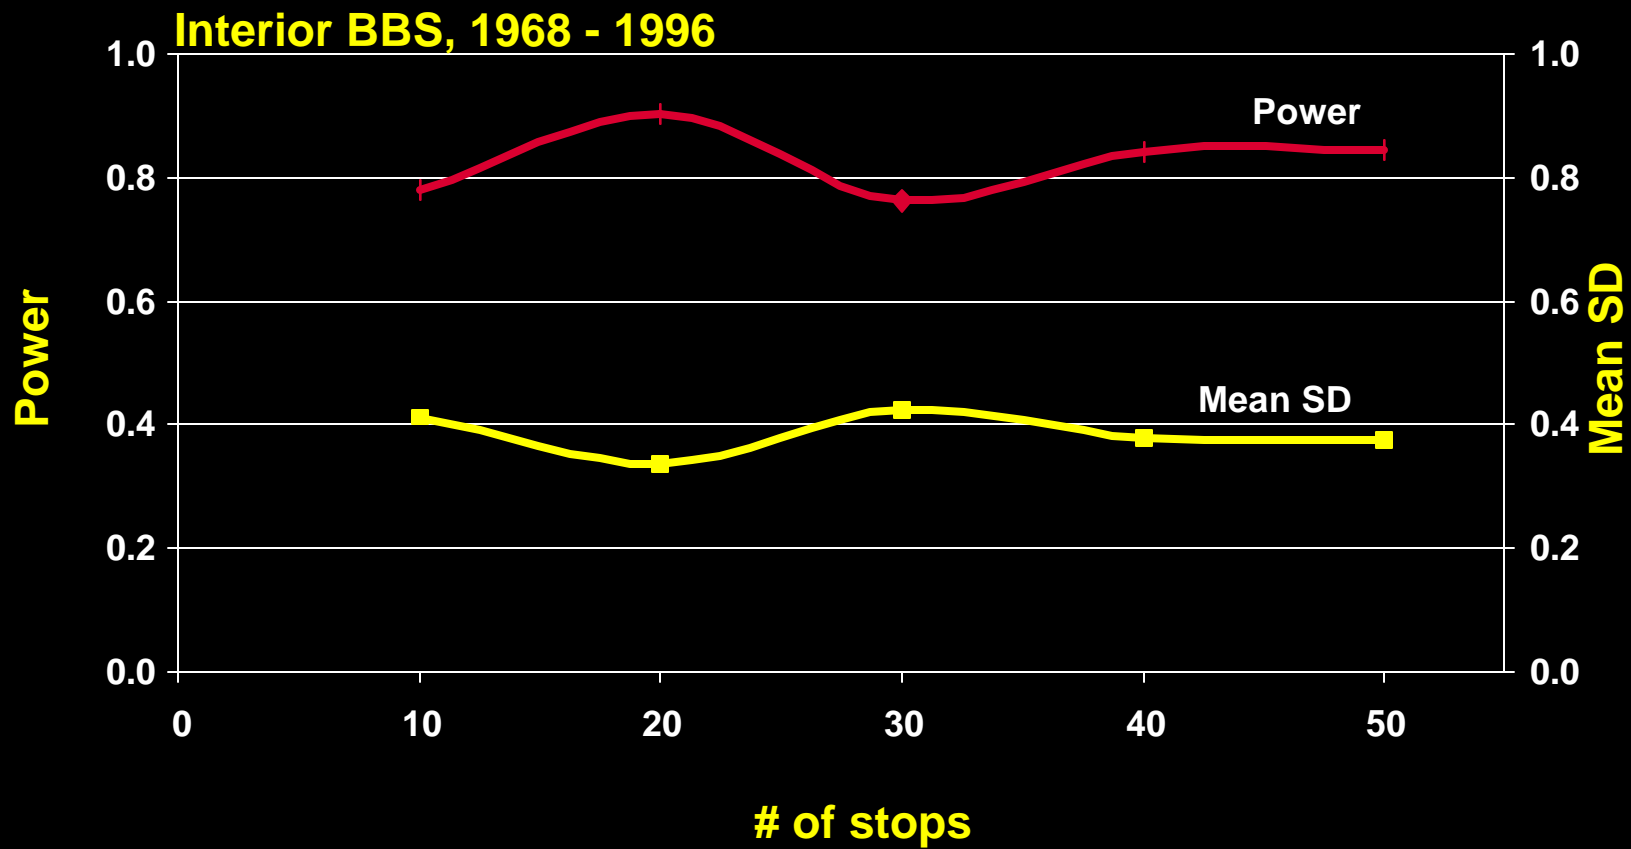

<b>Survey</b>	<b># Samples</b>	<b># producing estimate</b>	<b>% producing estimate</b>
<b>Pacific BBS</b>	<b>271.6</b>	<b>77.8</b>	<b>29%</b>
<b>Interior BBS</b>	<b>138.5</b>	<b>8.1</b>	<b>6%</b>
<b>Washington Call counts</b>	<b>54.5</b>	<b>35.9</b>	<b>66%</b>
<b>Mineral Sites</b>	<b>26.2</b>	<b>24.3</b>	<b>93%</b>

# The relationship between power and route length for Pacific BBS surveys

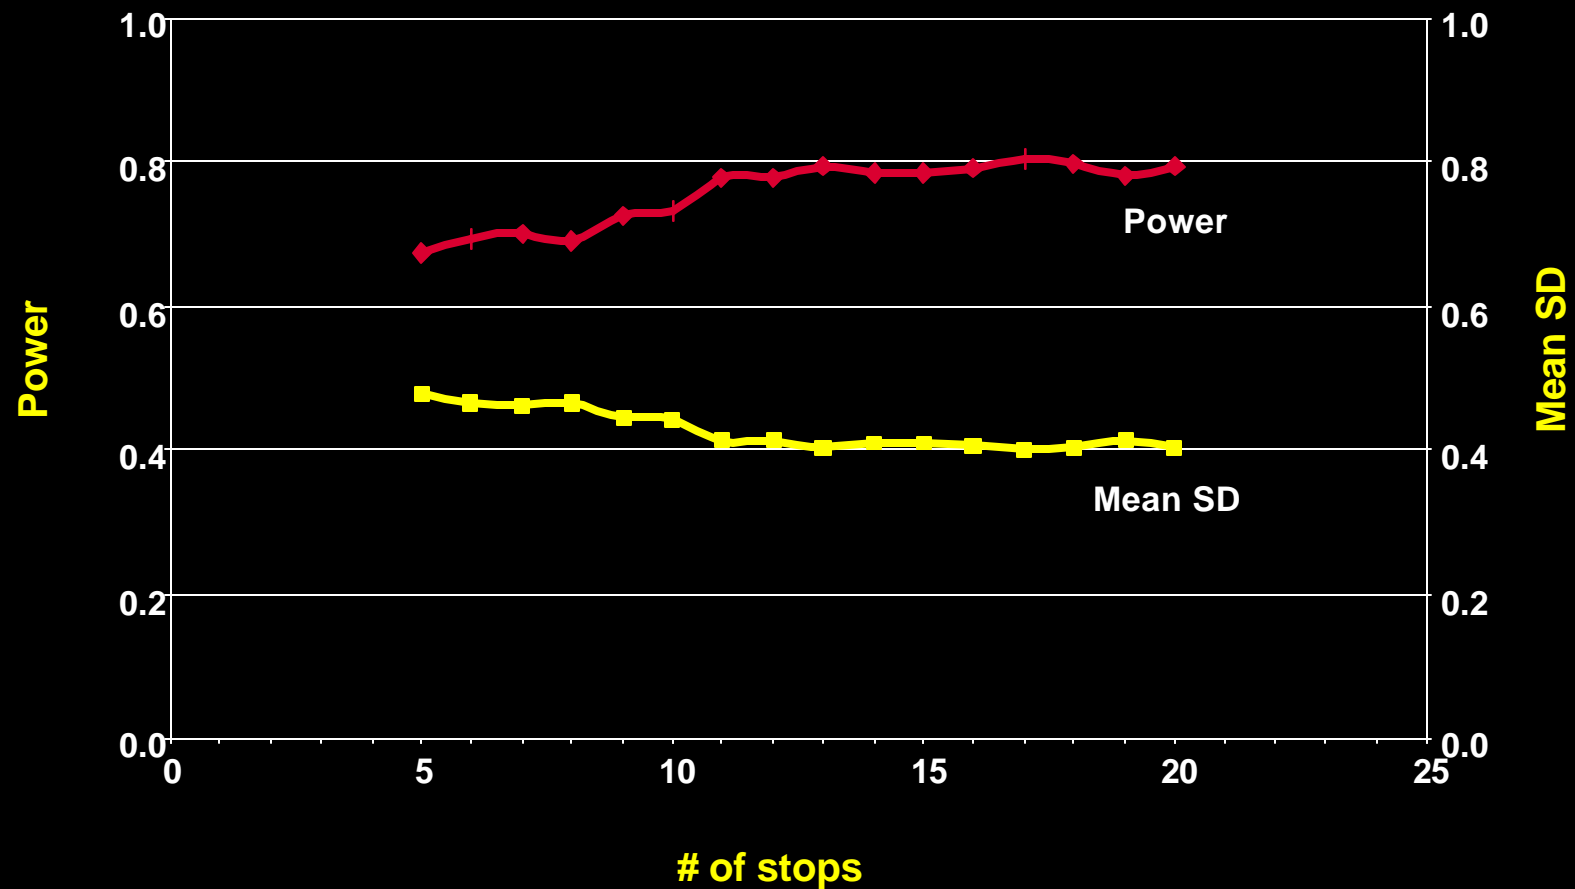

# The relationship between power and route length for Interior BBS surveys.

# The relationship between power and route length for Washington call-count routes.

Washington Call Counts, 1975 - 1997

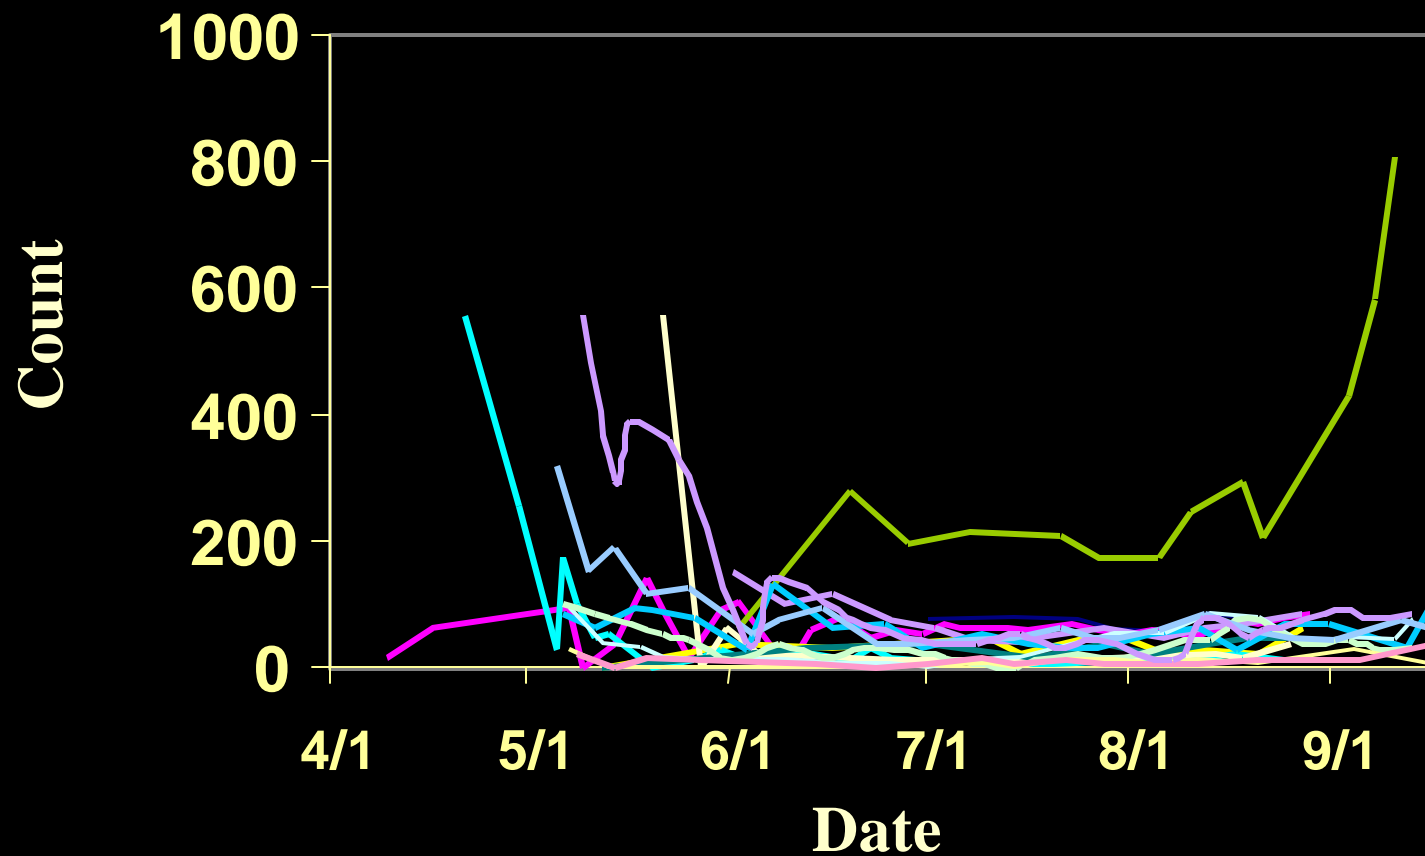

**Power Table: Estimated probability of detecting a 10% per annum change over a 3-year term at the 0.1 significance level**

<b># of Sites</b>	<b>Pacific BBS</b>	<b>WA Call Counts</b>	<b>Mineral Counts</b>
<b>30</b>	<b>0.13</b>	<b>0.19</b>	<b>0.79</b>
<b>50</b>	<b>0.16</b>	<b>0.26</b>	<b>0.94</b>
<b>70</b>	<b>0.19</b>	<b>0.32</b>	<b>0.98</b>
<b>100</b>	<b>0.21</b>	<b>0.41</b>	<b>1.00</b>

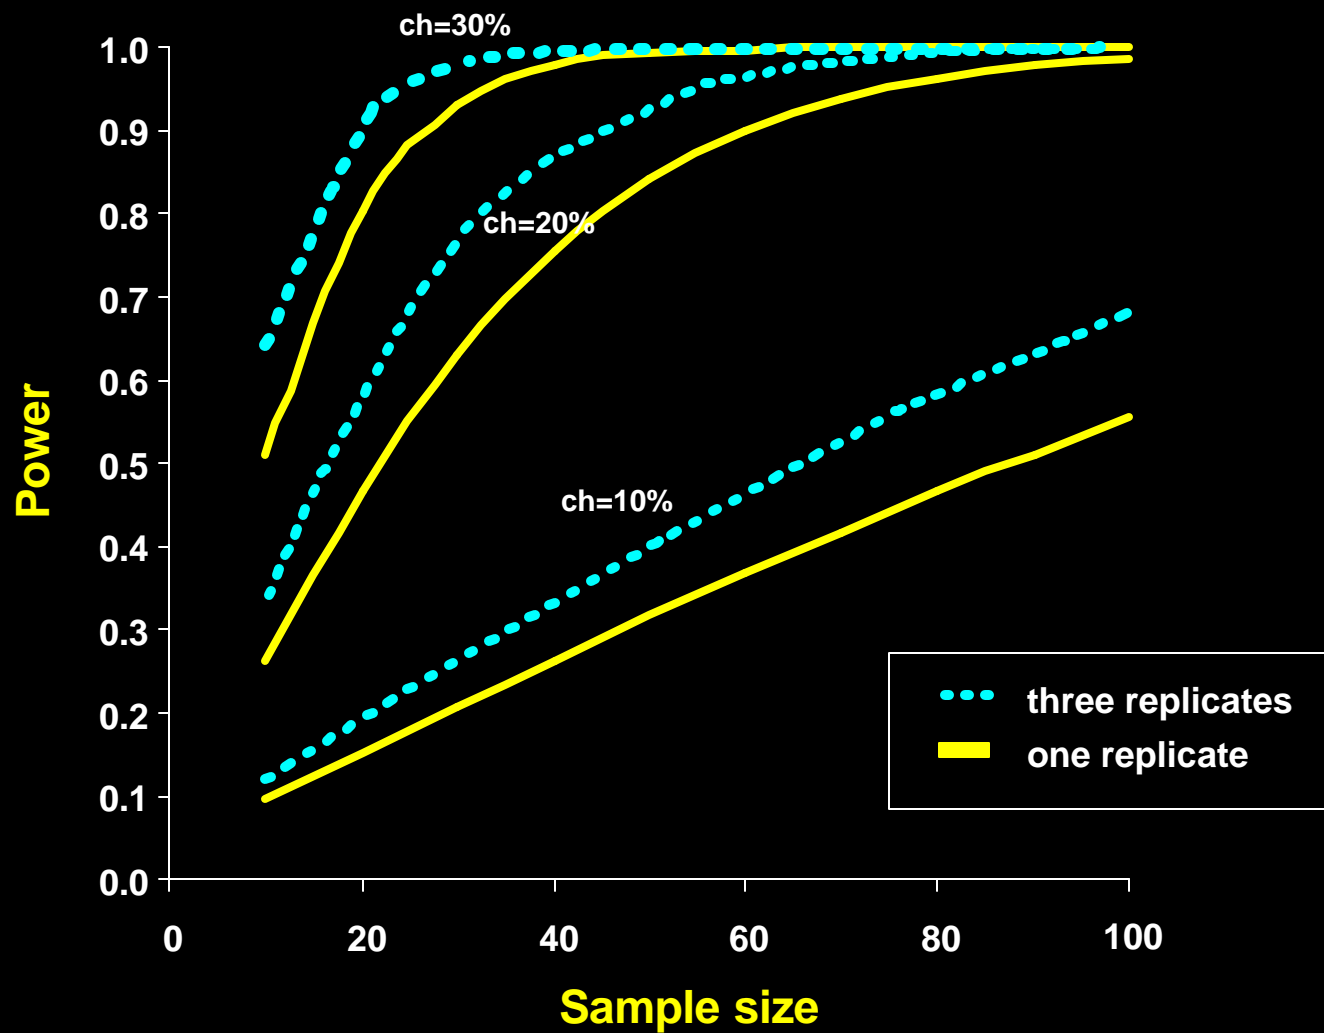

# Band-tailed pigeons counted at mineral sites in California 1998-1999

**July ("10 days) provides the most reliable trend estimates**

## Effects of replication on power for estimating 2-year trends in abundance of band-tailed pigeons at Northern California mineral sites

## **Management Implications:**

- ✓ **Mineral site counts offer the greatest potential to detect short term changes in relative abundance of band-tailed pigeons.**
- ✓ **Replication moderately improves survey power.**
- ✓ **Mineral site surveys should be conducted in July "10 days.**
- ✓ **Range-wide survey needed to index relative abundance of Pacific Coast band-tailed pigeons.**
