

Introduction

The annual Shifts in U.S. Merchandise Trade report is prepared on the basis of the Commission's more than 250 major industry/commodity groups and subgroups monitored by the Office of Industries. The analyses are performed by the international trade analysts of the U.S. International Trade Commission (the Commission), Office of Industries, who routinely monitor trade developments in all natural resource, agricultural, and manufacturing industries.

This report is divided into three parts:

Part I, which begins on page 2, presents an analysis of U.S. merchandise trade and overall economic performance from 2005–06. Overall U.S. merchandise trade performance is summarized for 2006, compared with such trade for 2005, on the basis of 10 merchandise sectors.¹ Coverage of the individual merchandise sectors includes data showing U.S. export, import, and trade balance shifts by sectors, industry/commodity groups (and in some cases subgroups), and shifts in trade with U.S. trade partners. Major shifts in trade are highlighted, which are examined in greater detail in the rest of the report.

Part II, which begins on page 13, presents and examines the shifts in U.S. trade with each of the top four U.S. trade partners—Canada, China, the European Union, and Mexico. Also presented and examined are shifts in trade with India, a U.S. trading partner that is of increasing interest and importance. Summary tables detail the important shifts in U.S. bilateral trade and highlight leading changes in industry/commodity groups for each of the major trade partners.

Part III, which begins on page 46, presents a general sector overview for each of 10 merchandise sectors, identifying significant shifts in trade within each sector. Each sector chapter includes a statistical summary table of industry/commodity groups or subgroups, showing absolute and percent changes in bilateral trade in a year-to-year comparison for 2005 and 2006, and a table of industry/commodity profiles.

In addition to the sectoral analyses, shifts in 23 specific industry/commodity groups are examined in greater detail. The industry/commodity groups were selected based on shifts in trade both on an absolute and percentage basis, exceeding \$1.5 billion and 10 percent.

¹ Agricultural Products; Forest Products; Chemicals and Related Products; Energy Products; Textiles, Apparel, and Footwear; Minerals and Metals; Transportation Equipment; Machinery; Electronic Products; and Miscellaneous Manufactures

Part I: U.S. Merchandise Trade and Overall Economic Performance

This part of the report presents an analysis of U.S. merchandise trade and overall economic performance from 2005–06. Overall U.S. merchandise trade performance is summarized for 2006, compared with such trade for 2005, on the basis of 10 merchandise sectors.² Coverage of the individual merchandise sectors includes data showing U.S. export, import, and trade balance shifts by sectors, industry/commodity groups (and in some cases subgroups), and shifts in trade with U.S. trade partners. Major shifts in trade are highlighted, which are examined in greater detail in the rest of the report.

² Agricultural Products; Forest Products; Chemicals and Related Products; Energy Products; Textiles, Apparel, and Footwear; Minerals and Metals; Transportation Equipment; Machinery; Electronic Products; and Miscellaneous Manufactures

U.S. Merchandise Trade and Overall Economic Performance

John Kitzmiller

(202) 205-3387

john.kitzmiller@usitc.gov

In 2006, U.S. total merchandise trade (exports plus imports) rose by \$308.2 billion (12 percent) to \$2.8 trillion, slightly less in percent terms than in 2005, while slightly higher in value. The fastest growth in exports of U.S. goods and services was to India, but exports to China, Africa, and Latin America also increased rapidly.³ U.S. total merchandise trade in 2006 accounted for 76 percent of total U.S. combined trade (exports plus imports of merchandise and services),⁴ a slight increase from 2005. It also represented 21 percent of real U.S. gross domestic product (GDP), up from 20 percent in 2005. The rate of increase in the U.S. merchandise trade deficit slowed from 17 percent in 2005 to 7 percent in 2006, even as the deficit grew from \$858.4 billion in 2005 to \$915.6 billion in 2006. Transportation equipment, electronic products, and energy-related products combined accounted for 49 percent of total merchandise trade in 2006.

The U.S. current account deficit (the combined balances on trade in goods and services, income, and net unilateral current transfers) increased from \$791.5 billion in 2005 to \$856.7 billion (preliminary) in 2006 as a result of the increase in the merchandise trade deficit and a shift from a surplus to a deficit on income. In contrast, the surplus in services increased and net unilateral current transfers to foreigners decreased.⁵

Continued economic growth in the United States and its major trading partners contributed to increased bilateral trade flows in 2006.⁶ Strong growth in consumer spending, business structures investment, and exports supported the economic performance of the United States.⁷ Crude petroleum prices continued to rise in 2006, resulting from increased global demand as well as supply disruptions in foreign countries.⁸

The U.S. economic growth rate increased in 2006, while growth among its major trading partners varied.⁹ Real GDP in the United States increased by 3.3 percent in 2006 (versus 3.2 percent in 2005),¹⁰ compared to 2.7 percent each in the European Union (EU) and Canada, 2.2 percent in Japan, and 4.8 percent in Mexico.¹¹ China was significantly higher, at 10.7 percent.¹²

³ Council of Economic Advisers (CEA), *Economic Report of the President*, 32.

⁴ Total U.S. combined trade increased by \$348 billion (12 percent) during 2006 to \$3.3 trillion, according to statistics of the U.S. Department of Commerce.

¹⁰ USDOC, BEA, *Survey of Current Business*, 6.

¹¹ OECD, *Main Economic Indicators*.

¹² Chinese National Bureau of Statistics, "China's GDP Grows 10.7% in 2006."

Consumer spending, the mainstay of U.S. economic growth, rose by 3.2 percent in 2006,¹³ supported by a rise in disposable personal income of 1.8 percent.¹⁴ Business fixed investment, made up of spending on equipment, software, and structures, increased by 7.4 percent in 2006, a rate slightly higher than the increase in 2005.¹⁵ Growth in this area was concentrated in nonresidential construction (office and industrial buildings), which grew by 9.1 percent, while investment in equipment and software grew by 6.7 percent in 2006.¹⁶

The Federal Open Market Committee (FOMC) raised the Federal funds rate from 5.0 to 5.25 percent in mid-2006, and it remained at that level through the year. The intent of the slightly higher rate was to foster sustainable economic expansion and to promote a return to low and stable inflation.¹⁷

World prices for crude petroleum increased by an average of 20 percent from 2005 to an average of \$60.12 per barrel in 2006. During the same period, U.S. imports of crude petroleum declined by 43,000 barrels per day (b/d) (0.4 percent). The increase in prices, influenced by rising global demand and supply disruptions and uncertainties, raised the cost of production for goods that use petroleum or its derivatives as an input, the cost of production for all goods in which energy is used during production, as well as the transportation cost for all goods.

The trade-weighted exchange value of the dollar declined by 3.75 percent from the beginning of 2006 through early February 2007, but varied widely against other currencies. Over that period, the dollar appreciated 2.25 percent against the yen and 1.5 percent against the Canadian dollar, but it depreciated by 4 percent against the Chinese renminbi, 9 percent against the euro, and almost 13 percent against the pound sterling.¹⁸

U.S. Trade by Industry/Commodity Groups and Sectors¹⁹

U.S. Trade Balance

The U.S. merchandise trade deficit expanded every year during the 2002–06 period (table US-1). In 2006, the U.S. merchandise trade deficit grew by \$57.2 billion (7 percent) to a record \$915.6 billion. Unlike 2004 and 2005, the value of the U.S. merchandise trade deficit was less than the value of U.S. merchandise exports, as the rate of increase in exports (15.6 percent) exceeded the rate of increase in imports (11 percent).

Although all industry/commodity sectors registered trade deficits in 2006, as they did in 2005, the rate of the overall deficit growth slowed in 2006. The deficits in the transportation equipment, forest products, and chemicals sectors actually declined as the increase in exports for each of the three sectors exceeded the increase in imports.

Source: Compiled from official statistics of the U.S. Department of Commerce.

Note.—Calculations based on unrounded data.

^aImport values are based on customs value; export values are based on f.a.s. value, U.S. port of export.

U.S. trade in energy-related products—crude petroleum, petroleum products, and natural gas and components—registered the largest trade deficit (\$280.2 billion) in 2006, as it has in every year since 2002, as well as the largest deficit increase (\$36.9 billion, or 15 percent), primarily because of higher prices (table US-1). The electronic products sector recorded the second-largest trade deficit in 2006 (\$162.8 billion), as well as the second-largest deficit increase (\$13.0 billion, or 9 percent), as U.S. companies continued to shift production overseas to take advantage of lower production costs and to serve growing Asian markets.

U.S. Exports

In 2006, U.S. exports increased by \$125.5 billion (16 percent) to \$929.5 billion, setting a new record (table US-1). Exports increased in every sector between 2005–06, as they did between 2004–05. Aircraft, spacecraft, and related equipment; motor vehicles; and petroleum products were the industry/commodity groups that recorded the largest increases in 2006, accounting for a combined \$33.5 billion (27 percent) of net export growth (table US-2).

Exports of aircraft, spacecraft, and related equipment, principally large civil aircraft, increased by \$16.4 billion in 2006 to \$64.4 billion (table US-2). Much of the increase was due to the expansion of airline routes and frequencies which required additional aircraft, as well as fleet renewal.

Motor vehicle exports grew by \$9.0 billion (26 percent) to \$43.7 billion in 2006. This was largely the result of increased exports of higher value vehicles to Canada, the largest market by far for U.S. vehicles.

U.S. exports of petroleum products jumped by 44 percent (\$8.1 billion) to reach a record \$26.4 billion as prices for crude petroleum continued to rise. The gain was due to increasing global demand and reduced foreign production capacity resulting from production cuts by members of the Organization of Petroleum Exporting Countries (OPEC), continued labor unrest in Venezuela and Nigeria, and the ongoing war in Iraq. For example, in 2006, there were approximately 1.3 million b/d of extra production capacity in the world, compared with 1.6 million b/d in 2005 (in 2003, there was more than 3 million b/d of excess capacity available).²⁰

The most significant decrease in U.S. exports was recorded by the cathode-ray tube industry, which dropped by \$308 million (51 percent) in 2006 (table US-2). Previously, the largest export component in this U.S. industry was picture tubes for use in the production of color television receivers in Mexico. As consumer demand shifted to television receivers incorporating flat panel displays such as plasma and LCD, the demand for picture tubes collapsed. Today, there are no longer any U.S. producers of color picture tubes.

Source: Compiled from official statistics of the U.S. Department of Commerce.

Note.—Calculations based on unrounded data.

^aImport values are based on customs value; export values are based on f.a.s. value, U.S. port of export.

U.S. Imports

In 2006, U.S. imports for all merchandise sectors increased by \$182.7 billion (11 percent) to a record \$1.8 trillion. The energy sector accounted for \$46.0 billion (25 percent) of the net import increase, minerals and metals for \$32.1 billion (18 percent), and transportation for \$20.6 billion (16 percent) (table US-1). Crude petroleum, motor vehicles, and petroleum products were the industry commodity groups that recorded the largest increases in 2006, accounting for a combined \$58.8 billion (32 percent) of net import growth.

Higher world prices drove up import values in the energy sector. Although the quantity of crude petroleum imported remained flat at 3.0 billion barrels, the value of crude petroleum imports increased by 25 percent to \$171.2 billion and accounted for 54 percent of sector imports in 2006 (table US-2). U.S. imports of crude petroleum continued to account for more than 60 percent of domestic consumption (table US-2).

Steel mill products, copper and related products, and precious metals and non-numismatic coins accounted for 57 percent of the increase in imports among minerals and metals. Steel imports increased as a result of increased demand that could not be met by domestic producers. Copper imports increased as a result of decreasing domestic capacity. The increase in precious metals imports was a result of worldwide price increases.

Significant Shifts in U.S. Bilateral/Multilateral Trade

The growth of the U.S. merchandise trade deficit in 2006 was an extension of trends established at the start of the decade. In 2006, the United States exported more merchandise to and imported more merchandise from all of its top 10 trading partners and with selected country groups, as shown in table US-3. The U.S. merchandise trade deficit increased as a whole and grew bilaterally as well with the four major U.S. partners: in descending order, Canada, China, Mexico, and Japan.²¹ Total trade with the EU-25 ranked ahead of Canada. However, the merchandise trade deficit with the EU15 and EU-25 decreased by 4 to 5 percent.

The increase in the U.S. merchandise trade deficit with China slowed to 16 percent (\$31.6 billion) in 2006 versus 25 percent in 2005. As in the last few years, a contributing factor to the widening merchandise trade deficit with China was increased production by foreign manufacturers in China. The merchandise deficit with Mexico grew by 22 percent (\$14.9 billion) due in large part to increased U.S. imports of petroleum products and transportation equipment.

The U.S. merchandise trade deficit with beneficiary countries of the Caribbean Basin Economic Recovery Act (CBERA) declined by 68 percent (\$3.9 billion) as U.S. domestic exports exceeded imports. The trade deficit with OPEC and with sub-Saharan Africa continued double-digit growth (12 percent and 18 percent, respectively). More detailed analysis of these and other trade shifts with five leading U.S. merchandise trading partners is provided in the following country overviews.

²¹ This order has remained unchanged since 2003. For the last five years, these countries have been the top four U.S. partners in terms of total trade, although the United States may not be a top trading partner for these countries. No individual EU country was consistently ranked among the top four overall U.S. trade partners during this time.

Table US-3 All merchandise sectors: U.S. exports of domestic merchandise, imports for consumption, and merchandise trade balance, by selected countries and country groups, 2002–06^a

Item	2002	2003	2004	2005	2006	Change, 2006 from 2005

Part II: Bilateral Trade

This part of the report analyzes shifts in trade between the United States and its four major trading partners (based on total trade)—the EU-25, Canada, China, and Mexico. Trade with India is also examined in light of India’s rising importance as a trading partner.
