Operations Without a Monitor

I. Purpose:

This procedure provides a sequence of keystrokes that can be used to run the BBSS program when the BBSS laptop monitor screen is out.

II. Cautions and Hazards:

None

III. Requirements:

None

IV. Procedure:

A. Steps:

1. Reboot the computer each time you start.

    a. While holding down the CTRL key, press the ESC key (this is like pressing the START button).

    b. Press the UP ARROW once.

    c. Press ENTER.

    d. While holding down the ALT key, press the R key.

    e. Press ENTER (this allows you to restart the computer).

    f. Wait until the hard disk light stops flashing before continuing. This is to make sure the computer is fully booted.

2. Run the Balloon Launch program.

    a. While holding down the CTRL key, press the ESC key.

    b. Press the UP ARROW three times, and press ENTER.

    c. Type C:\windows\desktop\launch balloon.pif

    d. Press ENTER (this will run the program).

    e. Wait 5 seconds to make sure the program is started.

    f. Press ENTER (this is the first part of the program where it asks if the data is ok).

    g. After the launch is over, don't forget to press the ESC key, and press Y to close the program. It may be difficult to tell when the launch is over since the laptop screen is not working. You will

have to go by the Digi-Cora display to tell when the launch is over.

- If the binary file count goes up in the health and status after each launch, it means it is working.
