Table 1: Country Program Strategic Overview

1.1 National Response

The HIV/AIDS programming environment in Rwanda has rapidly moved from pilot stage to national scale-up. The clinical loadcrahip of TRAC will be increasingly supported by other departments of the MOH, particularly the Department of Health Services, Department of Pharmacy and others. Implementation is moving from central support and project-managed service delivery to staged implementation that achieves sustainable national coverage by multiple donors in a coordinated network.

As Rwanda makes the transition from the war and genocide ten years ago toward a new era of sustainable development, the USG faces a dynamic set of circumstances that will influence the execution of the Emergency Plan. Recent funding from the Emergency Plan, Global Fund rounds 1 and 3, and the World Bank MAP have combined to significantly enhance Rwanda's cupacity to respond to the HIV/AIDS challenge. The USG plays a pivotal role in helping GOR coordinate these resources in support of the Rwanda National HIV/AIDS Strategic Plan (2002-2006) and the GOR HIV/AIDS Treatment and Care Plan (2003-2007). The USG provides ongoing management assistance to institutions in the Office of the Minister of State for HIV/AIDS and the Ministry of Health (MOH) and participates in donor coordination forums. The Emergency Plan also, of course, supports substantive activities that are coordinated with those funded by other donors and GOR resources.

National HIV/AIDS Action Framework

The USG action framework for Rwanda incorporates a strategic balance of rapid scale-up of interventions and ongoing capacity building of critically weak institutions, coordinated with the efforts of the GOR and other donors. This approach will yield steady progress toward the ambitious targets and allow continuation of services beyond 2008. Emergency Plan support is coordinated with the GOR entities, and supports GOR efforts articulated in a "Strategic Framework for HIV/AIDS Control 2002 – 2006", a "Multi-Sectoral Action Plan", a "National Plan for Monitoring and Evaluation of HIV/AIDS Programs' (December 2002), and a "National HIV/AIDS Care and Treatment Plan" approved by President Kagame's Cabinet in May 2003.

National HIV/AIDS Coordinating Authority

Rwanda has seen an evolving governance of national HIV/AIDS activities. In 2001, the former National AIDS Program within the Ministry of Health was replaced by a multi-sectoral National AIDS Control Commission (or CNLS, its French acronym) and the Treatment and Research AIDS Center (TRAC) at the MOH. The CNLS operates under the auspices of the President's Office with a board of officers who represent diverse sectors, including religious institutions, the Rwandan military and local government.

The CNLS mission continues to evolve, but its principle responsibilities include providing policy guidance and strategic leadership to coordinate a multi-sectoral, nation-wide response to HiV/AIDS; ensuring adequate monitoring and evaluation of HIV/AIDS activities; and technical assistance and support to decentralized HIV committees to mobilize community responses. An important role of the CNLS is to help coordinate and strengthen HIV/AIDS activities in all Ministries, especially Education, Defense, Gender, Youth, and Health. TRAC is responsible for HIV/AIDS surveillance, the development of clinical guidelines for the treatment of HIV/AIDS and related diseases, and certification of doctors to provide ARV therapy and provides training for personnel in VCT and PMTCT centers, and the district health teams that supervise these interventions. As HIV/AIDS activities expand and become mainstreamed into the health delivery system, it is increasingly clear that the Department for Health Services must play a leadership role in implementation, while TRAC remains the clinical leader. Furthermore, to be sustainable, the standards of care delivered in isolated pilots must now be translated into cost-effective standards without losing critical quality.

Within the MOH, the Minister of State for HIV/AIDS and Other Major Epidemics, oversees MOH directorates for HIV, Epidemiology, and the National TB and Malaria programs. The HIV Donor Cluster is organized under the auspices of UNDP, and is poised to assume a more prominent role. The Cluster is a committee of GOR and donor representatives charged with coordinating all HIV/AIDS-related donor activities, Representatives from USG agencies and multiple Rwandan institutions involved in the fight against HIV/AIDS meet as the Emergency Plan Steering Committee. The Steering Committee was formed to manage issues of national rollout, technical approaches, and coordination/management of activities with appropriate national and sub-national bodies.

These entities have significant overlapping membership, regular communication, and shared concern for the mission. While there may be some advantage, in principle, to having a single authority to coordinate all HIV/AIDS activity in Rwanda, the county's experience has led to this alternative structure that works effectively and is evolving as national implementation raises different challenges. Significantly, the GOR has shown a willingness to revise organizational structure when necessary to achieve effective coordination.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

12/09/2004

Page 5 of 272

The GOR has a national M&E plan for HIV/AIDS from 2002, a results-based five-year strategic framework, and institutions with well-defined mandates for providing evidence-based decisions. Reflecting Rwanda's status as one of the least-developed countries in the world, the system has significant weaknesses. The Emergency Plan, leveraging funds and mobilizing complementary resources from other donor agencies and the GOR as much as possible, will support activities to strengthen human and infrastructure requirements to make the GOR plan operational, and update the plan as necessary. Support will include staff training, development of tools for data collection and imanagement, diffusion and institutionalization of best practices in supportive supervision, and in data collection, quality assurance, analysis, reporting and use. Additionally, as implementation of HIV/AIDS services scale-up nationally, IT and M&E activities need prioritization to assure cost-effective, quality service delivery. The USG will provide support of targeted evaluations and the creation of opportunities for dissemination and use of M&E information at all levels of decision-making. The USG will continue to provide support to enhance the M&E capacity of decentralized service providers, as well as national institutions, such as the CNLS and TRAC, that are responsible for coordination of the national HIV/AIDS response. Support will include development of information management systems at health facilities, staff training, provision of IT equipment, and connectivity for health service delivery sites.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

12/09/2004

Page 6 of 272

Under the Emergency Plan, USG is helping Rwanda to develop an integrated national model for HIV services, with a continuum of care provided through a network of hospitals, health centers and community organizations. An effective network of HIV care requires strengthening each level of service delivery as well as coordination between these levels. Coordinated networks require effective information exchange and efficient transportation of patients, supplies, and drugs to the appropriate location for care. Targeted financing of health services will enhance efficient use of health care resources. Use of private-sector/market incentives to maximize coordination, quality and efficiency of each level of care is fundamental to creating an effective network of care.

FY2005 activities include a wide range of elements that will build networked system capacity. Innovative financial mechanisms to reduce barriers to care and increase service delivery efficiency are key elements piloted under the 2005 COP. A health financing procurement will introduce performance-based financing for VCT, PMTCT, ART and basic care, will increase productivity, quality of care and efficiency of service delivery, and reduce financial barriers to care for PLWHAs. Targeted financial incentives to health providers for quality HIV/AIDS services will speed progress towards Emergency Plan targets. Associated addit systems will enhance financial and clinical quality controls. The Emergency Plan activities will be coordinated with a separately-funded USAID Health Decentralization program, which addresses local government administration and health care management more broadly.

Strengthened supervision systems across levels of service will include more effective supervision of nurses at health centers by supervising physicians at ART hospitals as well as supervision of facility pharmacists by central pharmacists. Improved information systems will communicate needed clinical information to providers at decentralized levels, reducing geographic barriers to care. Cross-level supervision, information and financing flow are links that change isolated providers into a coordinated network of care.

Health providers, health facilities and communities will be more closely integrated as a result of a new local procurement to support Community Services. Support for CBO and FBO groups and Civil Society associations will engage communities to reinforce clinical service delivery. This non-clinical care will include activities such as social support of newly-diagnosed PLWHA, support for ART adherence, and follow-up of babies born to HIV+ mothers. The involvement of communities, at national, regional and decentralized levels will increase the responsiveness of HIV/AIDS service providers to patients. Cross-links to prevention, treatment and care will be integrated at all levels of the service network.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

1.3

USG will take a multi-pronged approach to address the severe human capacity deficit that limits Rwanda's national scale-up towards Emergency Plan targets. This approach includes: HIV-AIDS focused professional training, in-service training in clinical services as well as management, job re-design to broaden scope of practice, development of clinical protocols specific for practice settings to support the broadened clinical scope of practice, incentives for greater responsibility, continuous quality improvement activities, investment in enhancement of organizational capacity, and a community services procurement to invest in Rwandan national and community organizations. A Human Resources Assessment is underway. The USG strategy for national scale-up requires transfer of managenal capacity necessary to sustain institutions and "graduate" health facilities. The scale-up strategy starts with initial USG investment into central support and into existing service facilities. After ART, CT, PMTCT, and palliative care services are developed, management of these services is transferred back to the MOH and local facility management. Thus, managerial capacity is a key HCD need. While TRAC continues to provide clinical leadership, the role of other MOH agencies, such as Department of Health Services and Department of Pharmacy will provide contribute significantly to scale-up effectively.

The HIV/AIDS Fellowship program trains mid-level experts to manage HIV/ADIS service delivery or programs. Formal professional training activities include strengthening the HIV/AIDS component of nursing and public health courses. TRAC will continue to enhance its national training in ART, PMTCT, as well as Training of Trainers down to the district level. Additional training in pharmacy logistics, information systems and financial management are also supported. When technical advisors are placed in government institutions, the GOR is expected to hire counterparts to acquire technical capacity. Quality improvement activities occur at multiple levels, from collaboratives of PMTCT and ART service providers, to lab procedures and patient care sites. Human capacity is expanded through institutional capacity building for decentralized provision of prevention, treatment and care. In dialogue with GOR counterparts, USG has defined a strategy for investing in HIV/AIDS service provision start-up and subsequent institutionalization of service management to transfer responsibility of service delivery back to Rwandans, either the Ministry of Health or private management. Poor worker motivation is a frequent characteristic of under-funded health facilities. Performance-based financing for defined health services has been used with success in Rwanda to significantly improve health worker motivation and productivity. Within the HIV/AIDS financing procurement, transfer of health centers financing and management from USG partners to Rwanda will be piloted using performance-based financing on a multi-district level in 2005. Finally, as a consciously articulated strategy, the Community Services Procurement requires the awardee to contract with Rwandan individuals and organizations to provide as many services as possible, particularly community services, but also technical services whenever possible. The awardee is required to invest in developing the capacity of Rwandan organizations to manage subcontracts, financial and activity reporting, and performing services.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

12/09/2004

Page 8 of 272

The USG has engaged a wide range of partners in reaching Emergency Plan goals in Rwanda, and will expand that range of partnership in FY05, engaging more Rwandan groups as a means of developing critical institutions as well as working with Rwandan health facilities as partners in service delivery. In addition to current partners, such as TRAC, additional central-level public institutions, such as the Department of Health Services will become strong candidates for investment. USG seeks to expand partnership to decentralized public and private health facilities and to NGOs, FBOs and private-sector groups in Rwanda, with their roles increasing as those groups increase their capacity to take on the responsibilities of project management. For clinical services, including C&T, PMTCT, ART and palliative/basic health care, USG strategy is to provide initial investment to expand clinical capacity, but subsequently to transfer management back to Rwandan management. For multi-sectoral activities and non-clinical services, Rwandan groups that will be brought into project management roles in FY05 include the Ministry of Education, the National Office of Health Care (DSS), CARITAS (the national Catholic network), and a local IT firm to be determined through competition. For local groups with weaker capacity, partnerships will be initiated through sub-contracts to new or existing agreements, with the prime implementer providing TA to a local group to build capacity before transferring management roles.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

12/09/2004

Page 9 of 272

In Rwanda, public-private partnerships for HIV/AIDS relief will require further preliminary work. The private sector in Rwanda is generally underdeveloped, with few substantial local businesses and no major international investors to angage. The principle opportunities for public-private collaboration have been through coordination with private US foundations involved in Rwanda. With the current weak state of the private sector, USG must work primarily through the public sector in pursuing the Emergency Plan targets for Rwanda. At the same time, the USG team solicits involvement of the private sector wherever there is potential for constructive linkages in the domain of HIV/AIDS prevention, care and treatment, and will coarch for and pursue opportunities to develop public-private partnerships/global development alliances. Local capacity-building explicitly involves the private sector to the extent practicable. For example, all national training sessions on antiretroviral treatment (which are supported by USG) targeting both public- and private-sector practitioners and pharmacists, the USG will be soliciting bids from private IT firms (which are gaining prominence in Rwanda) to install and maintain Internet connectivity in several health districts which provide ART. USG will continue its search for opportunities, re-evaluate its tactics as the private sector develops, and build on advances resulting from development initiatives as they occur.

12/09/2004

Page 10 of 272

Local Partner Capacity for Health Care Delivery

Availability of ART treatment, PMTCT, and C&T has grown rapidly, and in FY05 the Emergency Plan will accelerate the shift to building local capacity for delivery and transferring management to local entities. USG supported partners will graduate their clinical sites to Rwandan management, using HIV/AIDS financing services (a new HIV/AIDS Financing Procurement). Integrated PMTCT and VCT services are now available at 103 of the 400 existing MOH facilities. Twenty-five of Rwanda's 30 district hospitals are providing ART, and plans are in place to expand ART services to the health center level. A total of 145 health centers and district hospitals offer TB services. The primary barriers to HIV/AIDS care remain financial, Financing for palliative/basic health care for PLWHA will be addressed through the HIV/AIDS financing procurement.

Coverage of services for OVC has been provided by USG through international organizations contracting with local CBOs and FBOs. USG will procure "Community Services" through a competitive procurement to more effectively develop these local organizations and develop national policy. The Ministry of Gender and Women will develop a minimum package of services for OVCs. A clearinghouse for services will also allow better support and coordination of local organizations providing OVC support This "Community Services" Procurement is a top priority and USG plans to deploy within six months. FY05 plans include procurements that will explicitly include capacity building and transfer of management responsibility to Rwandan entities.

Page 11 of 272

Rwanda presents a rich texture of progress, promise and challenges in gender roles. Despite its sexually conservative nature, Rwanda has progressive attitudes towards gender equality and the empowement of women. The GOR has made impressive progress in promoting women into key leadership positions within government and the First Lady is an outspoken advocate for women's empowement. The First Lady convened the first Summit of First Ladies of Sub-Saharan Africa on Children and HIV/AIDS Prevention in 2001 and a follow-on meeting in 2003, and continues to advocate and mobilize the country on sensitive subjects surrounding AIDS such as condoms, social stigma, and sexual violence.

The need for action and leadership is clear. Decision-making authority of most Rwandan women is limited to selected aspects of household management and child-rearing. The DHS 2000 reports that husbands in 48% of Rwandan households had sole decision-making authority regarding their wife's health. With many women unable to make decisions regarding their own health, equitable access to care and prevention interventions is a goal rather than a current reality.

Reports of widespread gender-based violence such as rape, domestic violence, child sexual abuse, and sexual harassment in schools are issues of major concern. The DHS 2000 revealed that 48% of men agree that burning food, neglecting children, refusing sex, going out without the husband, and discussing opinions are all acceptable reasons for domestic violence. Shockingly, 63% of women shared this view. Girls are susceptible to predatory sexual behaviors of older men, particularly those with economic power. Alcohol abuse, a fairly common phenomenon among Rwandan men, increases the incidence of casual and high-risk sex, especially in Kigali, where the commercial sex trade is well established.

For all the progress, and GOR support for further change, the status of women in Rwanda remains a serious risk factor for exposure to HIV/AIDS. The Emergency Plan program in Rwanda will address this troubling situation through a broad range of activities, reaching both women and men. It will integrate prevention and care initiatives implemented through community- and faith-based organizations, programs within the military, and support for the considerable efforts of the GOR.

Stigma and Discrimination

Even though social stigma associated with HIV is beginning to lessen, it is still widespread and a powerful disincentive to HIV testing and disclosure. In 1998, 60 percent of respondents to a PNLS (National AIDS Control Program) poll said they would not associate with someone they knew to be HIV positive. Many HIV-positive Rwandans fear loss of their jobs as a result of their disease. Fear of HIV causes some patients' families to abandon them as the disease reaches its final stages. There are nascent local associations of persons infected or affected by HIV/AIDS throughout the country, including a network of PLWHA, but these groups are loosely organized and inadequately funded to provide the necessary education, outreach and support.

Firm GOR support for treatment and care, as well as prevention, has substantially reduced the stigma of HIV infection. Open support by public figures such as the First Lady of Rwanda has been effective, especially when coupled with support for treatment and care. The widespread poverty of Rwanda contributes to some unfortunate counterexamples, with occasional reports of individuals claiming HIV infections in the hope of securing food. There is clearly a need for broad development assistance, including the creation of income opportunities for families whether HIV infected or not. The Emergency Plan in Rwanda recognizes this situation, even as it focuses attention and resources on reaching its prevention, care, and treatment goals, and supports interventions to reduce stigma and discrimination.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

12/09/2004

Page 38 of 272

	01,0
Total Funding for Program Area (\$):	

Current Program Context:

PMTCT services have been rapidly scaled up in 2004, with steady expansion of Emergency Plan supported services in six provinces, following the GOR national model of an integrated package of services of CT, PMTCT and palliative/basic care in health centers. Rwanda has widespread PMTCT due to a three-year, [Fund grant to provide nation-wide access to comprehensive, integrated CT services at 117 sites covering all 39 health districts in the country, with three sites/health district. In 2005, USG will finance an additional 10 PMTCT/CT sites. USG is also currently providing PMTCT services in VCT Integre (GF) sites. USG plans to turn responsibility for PMTCT/CT in these sites to GF (MOH), thus freeing up resources to support up to 6 additional sites, to total 16 new PMTCT/CT sites whithe MOH coordinates donor PMTCT/CT programs with the strategy of adding integrated services to existing health centers throughout the country in a geographically balanced manner. PMTCT and CT coordination have been merged into one Department at TRAC, who is hiring needed additional staff. There is a multi-agency PMTCT/CT technical working group to support PMTCT services that coordinates implementing partners and assists in developing guidelines, tools, and other materials to be used by the sites. \n\nThe USG strategy to scale-up PMTCT services consists of initial investment at health sites by USG partners to add PMTCT. After PMTCT-(and CT) services are implemented; these sites will be "graduated"; i.e. transferred back to the Ministry of Health/health district management and funded through Performance-based funding. A new multiyear procurement for HIV/AIDS Financing will provide financing based upon PMTCT performance as PMTCT sites in several health districts are transitioned back to local management. Each subsequent year, an additional cohort of expanded sites will be "graduated" back to local management, using HIV/AIDS performance financing from USG. InInAs Rwanda moves from pilot implementation of PMTCT to national scale-up, the important role of the Department of Health Services in managing health centers has become evident. While TRAC's role has been to provide clinical leadership in PMTCT, DSS's role is to efficiently and effectively manage health centers and their staff. In 2005, USG plans to strengthen DSS's capacity to manage large scale PMTCT delivery, through improved financial and human resource management nationally, regionally and at district levels. Better targeting of financing to maximize access of HIV+ patients to prenatal care and hospital delivery through community-based and performance-based financing of PMTCT is a key component of COP05 activities. In InUSG has also defined geographically its area of responsibility for PMTCT for six provinces. Other donors will support other provinces. In InAdditional USG PMTCT site locations will be chosen in part based upon supporting referral networks to ART sites. Referral relationships between ART sites and PMTCT sites will be established, with the long term goal that routine ART services of stable patients will occur at PMTCT/CT health center sites. Per national policy, health centers must first provide integrated PMTCT/CT services before they can be developed into ART sites. Thus, in Gikongoro in 2005, where there are currently no ARV sites, 2 PMTCT/CT sites will be opened in 2005 with the intent to add ART services in 2006 to these PMTCT/CT sites.

Program Area: Prevention of Mother-to-Child Transmission (PMTCT)

Budget Code: (MTCT)
Program Area Code: 01

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

TRAC Cooperative Agreement / Treatment and Research AIDS Center

Planned Funds:

Activity Narrative:

In FY2005, USG will continue its support to the Treatment and Research AIDS Center (TRAC) through a cooperative agreement-The PMTCT/VCT unit of TRAC will carry out the following activities in support of nationwide prevention of mother-to-child transmission:

- Directly finance and manage 3 integrated VCT/PMTCT sites in Cyangugu province;
- Strengthen human resource capacity through salary and training support for key PMTCT/VCT unit personnel (this includes training on planning and adult education);
- Revise national PMTCT protocols and training materials by holding quarterly meetings of the VCT/PMTCT technical group and duplicating and disseminating materials;
- Training of 2 individuals per district (26 districts) and 14 others (for a total of 66 people) in supervision. This supervision will be carried out on a quarterly basis and a conference for dissemination of results will follow each supervision activity;
- Assure the quality of district-level PMTCT service provision through quarterly supervision visits by the TRAC PMTCT/VCT unit
- Hold a collaborative-style workshop for service providers at health facilities to facilitate information exchange and discussion on the improvement of service provision; and
- Organize and sponsor a workshop for private medical facilities providing PMTCT.

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:		Call to Action/E0	GPAF / Elizabeth Glaser	Pediatric AIDS	Fou	ndat	ion
Planned Funds:	•			· .	-	_	

Activity Narrative:

This USG activity will continue to support and manage 17 PMTCT sites in Rwanda in 2005. During 2005, management of 6 of these sites (which are also GF VCT Integré sites) will transfer to local governance and will free up USG resouces. USG will then use these resources to add new PMTCT sites in USG provinces to expand PMTCT coverage. New USG sites will be located to refer patients, if needed, from PMTCT sites to ART sites for comprehensive ARV care. The transfer of sites to MOH/GF will help inform the development of the model of site "graduation" discussed under HIV/AIDS Performance-based financing.

This USG partner will work with Community Services Coordinator funded through Community Services procurement to provide outreach services to patients. This funding does include test kits,

National PMTCT program evaluation: USG will implement an evaluation study to determine the barriers to uptake of CT and ART prophylaxis in the context of ANC/PMTCT programs. This evaluation was designed in FY04. The University of Butare will implement the evaluation, with USG support. The results of the evaluation will inform the revision of National PMTCT protocols, and programs will be modified to address the barriers identified in the evaluation.

Activity Narrative:

USG supports PMTCT services in primary health centers in combination with other clinic based services (CT and OI/ARVs). This USG partner presently supports PMTCT in 21 health facilities. With additional funding in FY05, this partner will (i) continue ongoing services and (ii) inititate PMTCT at 5 additional sites in preparation for expanding ARV services in Byumba, Gikongoro, and Gitarama Provinces in FY06. (National GOR policy requires that integrated PMTCT/CT/OI/palliative care services be established in a site before ARV services can be offered). USG will work closely to support implementation of performance-based financing of PMTCT services as sites graduate to Ministry of Health management. Initial sites for pilot graduation would be combined Global Fund/USG sites.

Work with Community Services Coordinator funded through Community Services procurement to provide outreach services to patients.

Mechanism/Prime Partner:

HCD / IntraHealth

Planned Funds:

Activity Narrative:

Consistent with national PMTCT strategy, this USG partner will scale up MOH-supported PMTCT service outlets to 21 in 5 provinces (5 new PMTCT sites) which will be determined with USG and MOH during this funding cycle. Activities:

- (1) Together with TRAC and the DSS, USG will scale up MOH-supported PMTCT service outlets to 21 by adding another 5 service outlets;
- (2) Together with health districts, renovate and equip health centers for PMTCT services;
- (3) With TRAC, carry out 2 week PMTCT counseling course and follow-up for providers;
- (4) With the DSS, develop standardized safe motherhood tools for health centers that will be integrated into PMTCT services for HIV+ mothers;
- (5) Accelerate community prevention interventions to follow-up mothers and their infants who have tested positive but have not returned for their results;
- (6) Work with Community Services Coordinator funded through Community Services procurement to provide outreach services to patients.
- (7) Support the graduation of mature PMTCT sites to PMTCT performance-based financing and local management in pilot implementation during 2005.

Anticipated Results:

21 PMTCT service outlets are operational providing quality services (5 new sites) Increased access to quality PMTCT services

Quality PMTCT services integrated into routine MCH services

QAP / University Research Corporation, LLC

Planned Funds:

Activity Narrative:

URC/QAP Rwanda will emphasize transfer of Continuous Quality Improvement capacity to the Department of Health Services as URC/QAP finalizes the multi-year effort through Collaborative Approach to PMTCT service delivery. The activity will support a PMTCT collaborative that includes 18 sites in 12 provinces. With monthly coaching visits and learning sessions every three months, sites have measurably increased their use of best practices and evidence-based approaches. After 12 months of activity, the percentage of women receiving NVP was significantly increased (from 38% to 100% in 2/3 of QAP sites) as was the percentage of partners tested. QAP has been in Rwanda for over 6 years and plans to transfer all technical capacity and management to the Department of Quality Services at the end of FY05. Site improvements are usually changes in standard procedures that result in improved outcomes.

DSS will use CQI capacity in monitoring of quality of care in sites that receive PMTCT performance-based financing.

During COP05, QAP will assist the Department of Health Services in training district supervisors coach quality assurance teams at each participating health facility, to initiate and host collaboratives at the district level, and to develop communication systems so that communication can continue to occur among sites in between learning sessions. "The Collaborative Approach in Rwanda PMTCT" will be evaluated. If evaluation recommends, QAP will develop a manual to assist with transfer of capacity, including lessons learned.

Note: QAP's contribution to PMTCT targets - "number of pregnant women provided with PMTCT services" and "number of pregnant women provided with a complete course of antitretroviral prophylaxis" - is reflected in those PMTCT targets of other PMTCT implementing agencies (FHI, HCD and EGPAF).

Follow-up of babies born to HIV+ mothers to assure timely diagnosis of baby's HIV status. Assure baby's well child care record includes mother's HIV status 3. Appropriate prophylactic treatment and linking to nutritional support under basic ... health care (as appropriate and available). The Community Services Coordinator will work with existing Animateurs de Santé and assist the community organization(s) to apply for grants via the community services procurement. Funding for the Community Services Coordinator will be shared with C&T and ART services components of the Community Services Procurement, These funds also include funds for training, overhead, reporting and communication. This procurement for community services will build on the strengths of 1,300 elected local community Animateurs de Santé in all cellules of country. NOTE: this activity will contribute to PMTCT targets identified by other PMTCT implementing agencies (ie. number of women provided with services, number of women receiving full course of prophylaxis). **Activity Category** % of Funds ☑ Community Mobilization/Participation 20% Development of Network/Linkages/Referral Systems 15% **Local Organization Capacity Development** 46% Strategic Information (M&E, IT, Reporting) 4% ◩ Training 15% Targets: CI Not Applicable 110 ☐ Not Applicable Number of health workers newly trained or retrained in the provision of **PMTCT** services Mot Applicable a Number of pregnant women provided with a complete course of antiretroviral prophylaxis in a PMTCT setting ☑ Not Applicable 0 Number of pregnant women provided with PMTCT services, including counseling and testing 0 ☑ Not Applicable Number of service outlets providing the minimum package of PMTCT services

UNCLASSIFIED Program Area: Prevention of Mother-to-Child Transmission (PMTCT) Budget Code: (MTCT) Program Area Code: 01 Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM USAID Procurement/ HIV/AIDS Performance Based Financing / To Be Determined Mechanism/Prime Partner: Planned Funds: HIVIAIDS Services Financing Procurement Productivity and quality in PMTCT service provision will be enhanced through a procurement that targets financial support to health sites/district health teams proportionate to productivity and quality of PMTCT service delivery. blanned in FY05 for performance-based financing procurement will directly reimburse providers of PMTCT services for productivity and quality performance, as developed by resident health financing technical expert and PMTCT DSS/TRAC experts. Reimbursment will be linked to Emergency Plan and Rwandan targets for PMTCT, such as the number of women treated according to national standard. Reimbursement will be made to the health team/site that has budget responsibility/authority to manage their performance, including appropriate direct and indirect costs. Direct reimbursement for outputs and quality provides financial incentives to providers to provide the service efficiently and perform to standards. A clinical and financial audit system will be developed to verify performance. Support from USG in quality improvement capacity to DSS has occurred. This financing system will be piloted in several health districts as a first phase of a long term plan to transfer full capacity and responsibility for PMTCT service delivery to Rwandan health systems. The HIV/AIDS Financing Procurement will also review community-based financing to determine how to assist PLWHA to access basic health services, including hospital and/or attended delivery.

Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: HIV/AIDS School Based Program-MOE / Ministry of Education of Rwanda

Planned Funds:

Activity Narrative:

The Ministry of Education (MINEDUC) is an important new partner for USG for the expansion of prevention programs for high school students. Data from the BSS 2000 suggests that in-school youth are more likely to have an early sexual debut than out-of-school youth. Therefore, high school students are an important target group for abstinence messages. In FY05, MINEDUC and USG will initiate a new Healthy Schools project. With assistance from a TA partner to be determined through a competitive award, MINEDUC will:

Adapt an existing parent-child HIV/AIDS communication program (Kenya model) for Rwanda and implement the adapted program in 30 schools;

Expand prevention activities through small-grants support to youth-developed innovative programs related to prevention in 30 schools;

Adapt and implement the existing national prevention curriculum for secondary schools (focusing on abstinence messages) in 30 schools; and

Strengthen institutional capacity by supporting additional term-limited personnel including a monitoring and evaluation specialist, a trainer and an administrative assistant within MINEDUC's HIV/AIDS unit and 12 focal points for HIV/AIDS at the decentralized (provincial) level.

Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

IMPACT / Family Health International

Planned Funds:

Activity Narrative:

USG will fund these activities through this financing mechanism for 6 months until the Community Services Procurement is awarded midyear FY05. The new procurement will include a grants mechanism to support FBOs to provide Abstinence and Faithfulness to Youth. This mechanism has three principal components in ABY:

(1)USG supports the Kigali Archdiocese and four regional Dioceses: Byumba, Kabgayi (covering Gitarama), Kibungo and Nyundo (covering Kibuye) to promote abstinence and fidelity among youth and young adults, using peer education. Until the new Community Services implementer begins work, IMPACT will continue support of the Dioceses for peer education work under FY05 funding and further assist, formalize, systematize and expand these partners' initiatives in social support by integrating it into a training package for new peer educators.

(2) USG will continue funding of CARITAS, a national charitable organization for the Catholic Church, to introduce HIV prevention education into its premarital couple counseling services nationwide and will continue with this activity in FY05.

(3) USG will continue to support the work with PROFEMME, a network of women's organizations. PROFEMME is a Rwandan network that builds capacity of local organizations in HIV programming, conceptualizing and carrying out HIV campaigns and has focused on interventions targeting women and girls. The first ProFEMMEcampaign targeted women and focused on stigma reduction; the second campaign (Partinaires de confiances), currently underway, targets adolesent girls and focuses on the theme of promoting abstinence, avoiding sexually risky situations and risky relationships. As a follow on to the Partinaires de confiances campaign targeting girls, FHI will introduce a more intensive peer education program targeting girls in and out of school.

Costs for print materials and other media (especially radio) to support these activities are included in these subagreements.

Program Area: Abstinence and Be Faithful Programs Budget Code: (HVAB) Program Area Code: 02 Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: / Population Services International Planned Funds: USG will develop, in conjunction with Catholic, Anglican, Protestant and Muslim Activity Narrative: FBOs, targeted mass media and interpersonal communication interventions. The expected results of the campaign are increased abstinence (or delayed debut) from youth, partner reduction and decrease of high-risk behaviors and infidelity contributed to alcohol consumption on the part of married men and women. This USG partner will subcontract with Catholic Church network and Muslim religious network for each and separate funds will go to World Relief to use these developed materials within their faith communities: 1. Youth Abstinence Mass Media Campaign The mass media component will include the expansion and diffusion of a youth radio call-in program started under Emergency Plan Track 2.0, and the continued distribution of youth-oriented magazine/newspapers that are abstinence based. The radio call-in program will include HIV/AIDS education and prevention themes developed by PSI staff in conjunction with youth and faith based Partners. It will address topics such as the importance of delaying sex, reducing partners, getting tested for HIV if exposed, cross-generational sex, and will allow youth to call-in with questions and concerns and have them answered by qualified radio staff and guests in a frank and open manner. The magazine/newspaper will mix HIV/AIDS educational articles with popular topics for youth, such as sports, music, and hobbies in a dynamic and interactive manner. Question & Answer columns will allow youth to anonymously ask questions and receive answers, and magazine-based competitions with prizes will encourage youth to read and contribute to the magazine. The proposed mass media interventions will reach 50% of the target audience (youth) and will result in increased numbers of youth reporting abstinence, delayed sex debut, reduced partners, and going for CT services if at risk. 2. Fidelity for Married couples/Men Campaign: Materials for mass media and interpersonal communication, targeting alcohol and infidelity, will be developed for wide-use through FBOs, CBOs similarly to above youth campaign. Main activities: Baseline research; Radio show produced; Newspaper printed monthly: Promotion of radio show via alternate channels (billboards, fivers): Promotion of newspaper via alternate channels (radio, schools); Ongoing monitoring and evaluation.

Program Area: Abstinence and Be Faithful Programs **Budget Code: (HVAB)** Program Area Code: 02 Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: WR Track 1.0 / World Relief Corporation Planned Funds: This Track 1.0 grant for ABY (awarded in March 2003) will reach more than 400,000 Activity Narrative: youth ages 10-24 and more than 100,000 adults who can influence youth with AB messages. It will create a sustainable environment to support youth behavior change in 5 target provinces. This is accomplished primarily through peer education in schools and churches, formation of youth support clubs, outreach events, and mass media spots on radio. Adults who have influence over the behavior of youth (including parents, teachers, pastors, etc.) are encouraged to speak with youth about issues of health and sexuality. In FY05 USG will undertake the following complementary activities to enhance overall AB prevention messages for all age groups, providing positive role models for unmarried youth: ... Activity 1: Premarital counseling for church committees and church congregation leaders: USG will work with the national umbrellas of the Protestant churches and the Interfaith Umbrella to provide pre-marital counseling training for pastors. Fifty church leaders per province will be trained in premarital counseling They will be responsible during the first year to counsel at least three couples making a total of 150 couples per province. Activity 2: Marriage counseling seminars USG will assist an initial 12 churches with a one-day marriage counseling seminar, to include a minimum number of 20 couples per session. Activity 3: Pre-marital and marital counseling curriculum The Pre-mantal and mantal counseling curriculum training curriculum (and the HIV/AIDS Pastoral Vurriculum) will be developed, field-tested and printed for national distribution for 1200 parishes. Activity 4: Family Counseling

USG will build capacity of pastors and other church and community leaders to communicate and reinforce "B" messages for prevention of HIV transmission among married adults ages 20-55. USG will train church and community leaders in "HIV/AIDS and family counseling" approaches using curriculum developed in under 1.0. Key messages include preparation for marriage, communication with partner, understanding risks of HIV transmission, counseling of discordant couples gender-based violence, promotion of VCT, carring for family affected by AIDS, and

Mechanism/Prime Partner:

USAID Community Svcs Progurement / To Be Determined

Planned Funds:

Activity Narrative:

The Community Services precurement would complement the national media campaign and national funding to religious networks by providing flexibility to support existing and new local/community/FBOs that are very active locally in Abstinence and Fidelity promotion. The Community Services Procurement, using the Rwanda National Prevention Plan (whose development USG supported in 2004) as a guide, will fund activities on a community (as well as national basis if appropriate) to support abstinence and fidelity. Through development of a board to evaluate grant applications, USG will award grants to local organizations, including FBOs, for abstinence and fidelity activities. This procurement recognizes and seeks to reinforce the extensive activity by local FBOs and CBOs going on unsupported currently. It does not replace national level media campaigns or activities that can be organized nationally through central coordination mechanisms.

National level coordination of church networks is rapidly developing with the creation of an umbrella group for Religious Organizations within the CNLS, the national coordinating HIV/AIDS body. In COP04, USG contracted with a number of international religious organizations who provided ABY services; however, equitable geographic deployment and minimizing duplication was difficult to achieve. The PEPFAR Steering Committee has endorsed USG procurement of Abstinence and Faithfulness activities through more direct support of Rwandan religious and community organizations, including Christian and Muslim organizations. This procurement would continue many successful activities initiated in COP2004 which include direct support of multiple parishes that have been extremely active in promoting abstinence and fidelity through youth groups, premarital and marital counseling, and community outreach. Additionally, this procurement would develop coordinating mechanisms through the national coordinating religious group to assure that geographic regions were equitably addressed within the USG-assigned provinces and that national curriculum and training support was available to all regions. This procurement would fund local community organizations that applied for funding to provide strictly abstinence and fidelity promoting activities. Through this procurement, many FBOs that have not had adequate resources to effectively promote Abstinence and Fidelity will be able to establish youth groups, develop IEC, and provide faith based leadership to its youth and older community. Curriculum developed through other ABY activities (See PSI) would be made available to all groups interested in using it. USG will have a presence in many communities through the Community Services Coordinator, based at all USG health facilities, who will assist local organizations to apply for grants.

Targets are determined based upon 110 Community Service Coordinators hired in 100 sites.

In addition, this USG partner will work with faith-based networks including Muslims and Catholics to launch new AB activities on the national scale including a faith-based radio drama for youth (implemented in conjunction with PSI), peer education, youth social clubs and abstinence and faithfulness church curriculum development. Programs will be designed and implemented in collaboration with faith based organizations to reach-out to and engage parents, teachers, pastors, congregation youth leaders and other adults to encourage the open discussion with youth about issues of health and sexuality. All together, these efforts will result in more than 1.5 million youth reached with AB messages through the mass media, and more than 200,000 reached through community outreach.

direct funding and through technical assistance provided by Sanquin Diagnostic Services to rapidly strengthen blood transfusion services by improving blood transfusion safety and simultaneously increasing donations, coverage, and quality assurance. Activities will include increasing volunteer donations by strengthening and expanding the donor recruitment program, continuing to screen 100% of blood units collected by blood type, and providing appropriate training for all Blood Transfusion Center and hospital transfusion staff. The USG will also provide technical—assistance to the National Program to strengthen its guidelines on supervision and monitoring and evaluation. Finally, USG will provide assistance for the improvement of the National Program's infrastructure through the construction or renovation of Blood Transfusion Centers and the provision of necessary equipment and supplies. Total Funding for Program Area

Current Program Context:

The USG approach to rapid planning and implementation of safe injection programs in Rwanda will aim to reduce the burden of HIV transmission through unsafe and unnecessary medical injections. With USG assistance, Rwanda is implementing a three-step strategy recommended by the World Health Organization and the Safe Injection Global Network. The USG works closely with the MOH Department of Epidemiology and Department of Health Care Services to promote medical injection safety through establishing and revising national policies and guidelines, and through procurement of materials for and implementation of improved medical practices throughout the Rwandan health care system. FY 2004 injection safety activities included a national assessment of current injection practices, the development of the National Injection Safety and Infection Control Policy, and the National Strategic Plan on Injection Safety. Also in FY 2004, a comprehensive assistance package for improving medical injection safety and medical waste management was piloted in two health districts. The package includes procurement of safe injection equipment, as well as a comprehensive training component for all levels of medical providers. FY 2005 activities will include further national policy development and revision (including National Orug Policy), as well as the expansion of provider training and procurement of injection safety supplies in ten new districts, in order to continue working toward full national coverage of injection safety activities.

Result 5;	Full supply of related drugs, condoms, medical equipment and supplies achieved
	Inding Planned for Condom Procurements

Current Program Context:

The USG will support GOR's implementation of their National Prevention Plan and the President's national call to. action through: \n1) Promotion of abstinence and fidelity in active partnership with Catholic, Anglican, Protestant and Islam faith networks, community churches and mosques and nationally with the Interfaith Umbrella group. USG will reinforce Rwanda's delayed sexual debut and promotion of marital fidelity, especially to men, through active partnership with national church/mosque networks,\n2) Education and behavior change campaigns to promote abstinence for youth, fidelity for adults and alcohol as a risk factor. USG will support the development of mass media, including audio/radio dramas portraying real-life choices and call-in shows. These audio dramas will be shared with church networks for their use. In3) Targeted interventions to high risk groups; USG will focus interventions to reach high risk groups: Discordant Couples: At CT and PMTCT settings, there will be active partner outreach and education, already improved through best practices. Couples will receive information and education. USG will reach out to CSWs through a group of former, faith-based sex workers, through focus-group developed educational material and through Rwandan Defense Force hospitals and clinics. STI treatment services will be provided in Kigali. USG will support the Ministry of Education to implement school-based CT at 30 secondary schools in 2005 and 50% of the country's schools by end FY 2008. Rwanda will participate in the regional transport corridor project that provides information and education along transport corridors in the Great Lakes region. Given the regional conflict, this is a high national priority. Mobile testing units will focus on reaching refugees and prisoners, with appropriate materials development. Thousands of prisoners from the genocide, scheduled for release in the next few years will be targeted for CT and education. Special material and outreach to Rwandan police. The CS Procurement will fund additional programs focused at local high risk groups. (n4) Continued roll-out and implementation of integrated clinical prevention services. The quality of clinical prevention activities, including PMTCT, Injection Safety, and Safe Blood Practices will continue to be strengthened through sharing of best practices and 16 new sites will steadily be added to over six provinces to achieve national scale. In5) 53% of "Other Prevention' activities will be implemented through a Community Services Procurement to support Rwandan organizations, at community and regional levels, including faith-based networks. Local organizations will apply for grants to provide prevention services. To date, community groups have been extremely active in education, outreach and mobilizing communities against HIV/AIDS.\n

Activity Narrative:

Safe T Stop concept and northern Transport Corridor: Rwanda will participate with other regional countries in a project to provide intensive information and education campaign along regional transport corridors. This program will target hig-risk mobile populations with prevention activities and services while identifying vulnerable PLWHA and PABA for community-based support in key corridor sites. A dual approach to reaching target populations includes: men reached in worksites and stop-over towns and women reached in stop-over border towns. Peer education is a core strategy. STD services will be promoted and referrals to other HIV services. These activities will includie food/nutrition support, policy change, education, etc. This program is coordinated with other countries along the transport corridor.

Program Area: Other Prevention Activities Budget Code: (HVOP) Program Area Code: 05 Table 3.3.5: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: / Population Services International Planned Funds:

Activity Narrative:

There are two distinct target populations that fall under this program area; Rwandan Local Defense Forces (LDF) and the National Police and Commercial Sex workers.

The objective of this program is to increase awareness and knowledge about HIV/AIDS prevention practices among high risk groups, primarily law enforcement and secondarily, the high risk groups that law enforcement officers have frequent contact with, namely CSWs. Law enforcement and CSWs are both high risk groups that interact frequently. Law enforcement officers and CSWs can be key allies in reducing high risk sexual behavior if groups receive appropriate education and useful information about effective means of reducing infection. The program aims to achieve this objective through several different activities, specifically: peer education training using law enforcement and CSWs. Law enforcement can be critical means of providing information to CSWs. Materials will be tested through target audience focus groups, PSI proposes to work in close collaboration with the CNLS and the Message Approval Committee (CAM).

In FY05, working with the Rwandan Local Defense Forces (LDF) and the National Police, the program will increase awareness of and knowledge about HIV/AIDS prevention practices, and to increase access to HIV/AIDS prevention services, such as counseling and testing and condom use, among active members. To assist with program coordination, USG will design and implement all activities in partnership with: the National AIDS Commission (CNLS), Ministry of Defense (Directorate of Medical Services—DMS), Ministry of Internal Security, Ministry of Internal Affairs, and Ministry of Local Administration. Initial discussions have already taken place with the CNLS and the National Police, resulting in their input in suggested activities.

To ensure the sustainability of HIV/AIDS prevention programs among the LDF and the national police, trained peer education trainers will train 3000 LDF (2 per sector) and 500 police peer educators to conduct outreach sessions among their peers. Peer educators will be provided with training in communication techniques, HIV and STD prevention and treatment information, and key behavioral themes among the target groups. USG will furnish IEC materials for use during peer education activities. Sessions will be monitored for quality assurance by participant pre/post-evaluations, supervisory visits, regular refresher courses; and—monthly/quarterly reporting. This initiative will serve to reach 75% of the total of both active LDF and police.

To facilitate peer educators, interpersonal communications materials will be designed and produced. Key themes will be personal risk perception and HIV/AIDS prevention awareness, with an emphasis on CT and the availability of care and support options. Specific risk taking behaviors such as alcohol use and paying for sex with prostitutes will also be included. Specifically, the IEC materials will be a flipchart, picture codes, and role plays for use during outreach sessions conducted by peer educators. Mobile video units will show spots produced displaying short-films targeting the two audiences, which will be produced by PSI and the collaborating partners to be shown during outreach sessions. Posters will be produced for distribution among units, and targeted radio spots will be produced and aired on national radio stations. IPC and mid level media materials will reach 90% of the target populations.

Peer educators will also be trained as condom community-based distribution agents to increase condom accessibility in and around LDF and police deployment areas and in areas of sex trade. They will be trained in sales communications techniques, stock management, and financial reporting. A condom stock management system will be put in place to regularly monitor condom availability among the LDF and police organizations, to avoid stock-outs or non-availability among certain units/areas. A total of 500,000 condoms will be distributed through the peer educators and the national organizations during the project period.

CSWs will be referred to STI clinic for CT and STI treatment. IEC will be distributed in collaboration with the STI clinic.

Table 3.3.5; PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

PSI-DOD / Population Services International

Planned Funds:

Activity Narrative:

The program objective is to continue to increase awareness of and knowledge about HIV/AIDS prevention practices, and to increase access to HIV/AIDS prevention services, such as counseling and testing and condom use, among active members of the Rwandan military.

In order to meet the high demand for counseling and testing services among the military, USG will support a third mobile Counseling and Testing Unit (2 to be launched in 2004-5), to conduct HIV CT and STI diagnosis and treatment in remote deployment areas. The services team will spend one week in each location, allowing them to also refer patients to follow-up HIV care and support services, such as PMTCT for married men, offered in military and public health clinics. All CT activities will be monitored and evaluated for quality, as per national protocol.

To ensure the sustainability of HIV/AIDS prevention programs among the military, peer education trainers will train 600 military peer educators (50 per brigade) to conduct outreach sessions among their peers. Peer educators will be provided with training in communication techniques, HIV and STD prevention and treatment information, and key behavioral themes among the target groups. USG will turnish IEC materials for use during peer education activities, such as a military peer education manual already in existence. Each peer educator will then be expected have regular contact with a minimum of 25 peers during the project duration, reaching a total of 15,000 soldiers, at all ranks. Sessions will be monitored for quality assurance by participant pre/post-evaluations, supervisory visits, regular refresher courses, and monthly/quarterly reporting.

To facilitate peer educators, interpersonal, and mid and mass media—
communications materials will be designed and produced. Key themes will be
personal risk perception and HIV/AIDS prevention awareness, with an emphasis on
CT and the availability of care and support options. Specific risk taking behaviors
such as alcohol use and paying for sex with prostitutes will also be included.

Interested peer educators will also be trained as condom community-based distribution agents to increase condom accessibility in and around deployment areas through targeted distribution. They will be trained in sales communications techniques, stock management, and financial reporting. Additionally, USG will offer technical assistance to DMS to create a condom stock management system will regularly monitor condom availability, to avoid stock-outs or non-availability among certain units/areas.

Mechanism/Prime Partner:

USAID Community Svcs Procurement / To Be Determined

Planned Funds:

Activity Narrative:

The "Community Services" procurement will provide 53% of "other prevention" activities and will include for national and community based prevention activities in FY05. One purpose of this procurement is to fund Rwandan organizations, capitalizing on Rwandan expertise of and access to interpersonal and social communication networks. This procurement will be developed aggressively with the goal of an award within 6 months. These prevention activities will be consistent with the Emergency Plan and GOR National Prevention Plan priorities and national messages. The awardee will develop sub-contracts and grants award mechanisms, with GOR and community input, to provide funding to locally designed, managed and implemented projects. A Board will make awards based upon criteria in National Prevention Plan, board members will include CNLS, PEPFAR Steering Committee, national umbrella groups and USG.

The procurement will target community populations as well as high risk groups, including transportation corridor populations, urban populations, refugees, prisoners, military communities, childheaded households, mobile working men at coffee/tea plantations, CSWs, clients of CSWs, discordent couples and other groups. Other activities will include: 1. Mobilization of communities for prevention education, such as community discussions on alcohol and high risk sex, fidelity, transactional sex, vulnerability of young women, etc. 2. Support of PLWHA individuals and organizations to support behavior change, partner/family testing and prevention for positives. 3. Capacity-Building, development of "National Umbrella Organizations" and CSOs engaged in Community-Based Prevention activities to bring prevention information to all communities. 4. Formation of community-based groups to integrate treatment, prevention and care activities, involving patients at USG health facilities to assure that all PLWHAs are supported in personal prevention efforts.

Prevention activities will employ and strengthen community, regional and national organizations, such as Umbrelias, Reseau, Dioceses, SWAA, etc. Criteria for award(s) will be developed jointly with GOR and USG, consistent with USG requirements.

Development and approval of work plans will occur jointly with USG and GOR designated team.

Table 3.3.5: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

AIDSMark -deferred / Population Services International

Planned Funds:

Activity Narrative:

This activity was approved in COP04, some funds of which were deferred to FY05.

The objective of the youth program is to increase awareness and knowledge about HIV/AIDS prevention practices among Rwandan youth, ages 10 – 24. The program aims to achieve this objective through several different activities to build upon those started in FY04 with Emergency Plan funds, specifically: peer education training, and the continuation of youth-friendly CT services targeting youth at high risk of contracting HIV/AIDS such as out of school youth, demobilized soldiers and child headed households. All activities will be done in coordination with the CNLS and TRAC and executed with local partners working with CHH and high-risk youth.

Based on the successful Centre Dushishoze youth center in Butare, services at the center in Butare and three additional CT sites will be continued. Centre Dushishoze provides voluntary counseling and testing for HIV/AIDS to adolescents aged 15-24, including treatment of STIs. In 2005, Centre Dushishoze will test 4,500 high-risk youth. In addition to its counseling services, Centre Dushishoze serves as a recreational and educational youth center, with skills classes and leisure activities targeting out of school youth and street children.

Main activities:

- 4,500 youth provided with CT
- · 45,000 youth visit Centre Dushishoze and other CT sites
- Facilitation sessions with youth in outlying areas
- Parent/Community advocacy program
- · Promotion of services

Peer education is a cornerstone of Centre Dushishoze activities, and has been a key element to its success among youth in Butare, both within the Center and through rural facilitations in outlying areas. Centre Dushishoze peer educators serve as trainers of trainers in HIV/AIDS prevention for other peer educators in Rwanda. USG will train 1600 peer educators in 4 target provinces, reaching at least 60,000 youth at high risk of contracting HIV/AIDS. PSI will train peer educators to use interactive, interpersonal communications to address key HIV behavior change themes, and will provide IEC materials for distribution. Trained peer educators will be regularly monitored by trained supervisors, and will be required to submit monthly reports. The selection of sites for the peer education training is based on extensive collaboration with the other USG partners working on similar interventions.

Main activities:

- Train 1,600 peer educators trainers in 4 target provinces
- 60,000 youth trained
- Develop interactive interpersonal communications
- Develop peer education training manual

Total Funding for Program Area (\$):

Current Program Context:

The Rwanda national CT program currently has 88 CT sites throughout the country. The GOR service delivery model is to integrate PMTCT, CT and palliative/basic care services at the site level (called VCT Integré). PMTCT/CT programs also are managed jointly at the central level by TRAC with a PMTCT/CT technical working group. Since program initiation, demand forCT services has exceeded capacity at all sites. In addition to VCT Integré, there are 6 CT sites which are not attached to health centers and specifically focus youth, which USG supports. USG currently directly supports 67 integrated PMTCT/CT sites in-country (FBO and MOH sites) and provides support to the MOH national PMTCT/VCT technical unit at TRAC. The Global Fund is providing support for VCT Integré expansion to provide CT services at 3 sites per district (for a total of 117 sites) by 2006. VnUSG support to date includes: Vn-

Support of PMTCT/VCT Technical Committee. This committee currently is reviewing curricula and guidelines, sharing lessons learned, and advising TRAC on other technical issues.\n-Promotion of couples' counseling and referral to care and treatment services at all USG sites \n. Stigma reduction and increasing demand for CT. services through national media campaign and community-based prevention.\n-Formal Quality improvement through an "Collaborative" of 18 sites providing VCT Integré services. At sites participating in this collaborative, the rate of partner testing has increased from 40% to 100% at most sites, simply by expanding hours, writing letter to invite partner for testing and other low tech, low cost interventions. The Continuing Quality Improvement activities are based in the Department of Health Services and TA to DSS is developing their capacity to manage CQI activities themselves by the end of 2005.\n-Training and development of critical CT tools, such as national curriculum. supervision guidelines, and revision of CT data forms and formats. \n• USG will continue to provide technical support with six key positions including an international technical advisor. The technical assistance to TRAC includes revision of national protocol and training materials, supervision training, annual workshop for quality improvement. procurement for select sites. In Proposed New 2005 activities: In-Support 3 mobile CT units, \n. services at military bases to include the civilian population around brigades, which includes a large number of CT of prisoners will be initiated using mobile units. \n. In 2005, USG will support the GOR/DSS to develop a performance-based contracting for PMTCT/CT service delivery as pilot in 3 health districts. USG implementing partners will be used to initiate CT services at new health centers. Once services are functioning, budget authority and management of sites will revert to local governance, but USG financing will continue using performance-based financing as described in HIV/AIDS Financing Procurement.\n-Support the elaboration of the different roles of DSS, health district teams and TRAC in the management of the large number of C&T sites as national scale-up continues.\n-USG is developing mechanisms to routinely test all hospital and TB patients. In-11 new CT sites. Sites are located in six provinces and in referral areas for ART services \n. Testing of family members of HIV+s in their homes using mobile CT services. \n-CT campaign for Ministry of Education with focus Technical assistance to the MINEDUC HIV/AIDS Unit to develop a on teacher and secondary school students.\n• teacher workplace CT prevention and testing program\n\n

In FY2005, USG will support the Rwandan Ministry of Education (MINEDUC), a new partner, in piloting the testing components of the Healthy Schools project targeting teachers, secondary school students and local community members. The HIV/AIDS unit of MINEDUC will work with a USG TA partner (to be determined through competition) to: Design testing promotion materials targeted to high school students and teachers; Recruit and train health educators to implement school-based CT in 10 schools; Initiate a pilot CT campaign for Ministry of Health staff, teachers, students and community members at 10 secondary schools. The Minister of Education and his staff will lead the campaign with public HIV tests, making him the first politically prominent Rwandan to do so. The CT campaign will be launched via a mobile CT unit that travels from school to school providing free VCT services to teachers, students and community members. Initial preparatory activities will include the design of the C&T campaign, development of CT consent materials for youth, and recruitment, hiring and training of health educators to manage the campaign. The program will be rolled out initially in 10 schools in FY2005. **Activity Category** % of Funds ☑ Commodity Procurement 5% Human Resources 10% Infrastructure 60% Policy and Guidelines 5% \square Strategic Information (M&E, IT, Reporting) 10% Workplace Programs 10% Targets: ■ Not Applicable 5 □ Not Applicable Number of individuals trained in counseling and testing 2,750 Not Applicable Number of individuals who received counseling and testing

Table 3.3.9; PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Call to Action/EGPAF / Elizabeth Glaser Pediatric AIDS Foundation

Planned Funds:

Activity Narrative:

The GOR has embraced integrated CT, PMTCT and Ol/palliative care (called VCT Integré). This activity is adding CT for men and families to its PMTCT sites. The current demand for CT services significantly exceeds the capacity of existing CT sites.

By the end of March 2005, USG will be supporting 17 sites, 6 of which will be graduated to the MOH management (with USG funding through TRAC). After graduation of these sites, USG will support CT testing at 5 additional VCT integré sites in six provinces (total of 16 sites). USG scale-up process is to have USG partners do the initial investment in sites to add CT and PMTCT services. Once these services are stable and functioning; usually after one year, USG will return management of sites back to local governance and to provide site financing through performance-based financing as described in the Health Financing Procurement. To date, TRAC has been managing VCT Integré sites. However, as national scale-up continues, the role of Department of Health Services, through its district sites, in managing health facilities generally, needs to be strengthened and developed. See Health Financing Procurement.

These funds do not include test kits, which will be provided by another USAID partner.

Table 3.3.9: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:	IMPACT / Family Health Internati
Dianned Eurode:	

Activity Narrative:

This USG activity is presently supporting CT services in 28 health facilities and in six community-based centers. In order to facilitate the effective and efficient transfer of authority of the most well-established and fuctioning sites to the MOH and local Rwandan organizations by mid-year, this activity will increase capacity of these organizations for management. In addition, USG will assist the MOH with scale-up by opening 5 new CT centers around new sites designated for ARV roll-out.

Specific activities include:

- 1. Work with Rwandan partners to transfer management for existing community-based CT sites. This includes assisting AFRICARE in Gikongoro transfer CT services to a close by health center to be managed by the Ministry of Health.
- Continue to build capacity at the Department of Health Services and TRAC in order to hand over CT services at Kibungo Hospital and Kicukiro Health Center to the Ministry of Health and local authority;
- Work with hospital staff to promote and extend CT services to hospital in-patients, especially to individuals at high risk for HIV;
- 4. In preparation for expanding ARV services in Byumba, Gikongoro and Gitarama Provinces in FY06, initiate CT services at 5 additional clinic-based sites in these three provinces; and
- 5. Work with hospital staff to promote and extend CT services to hospital in-patients, especially to individuals at high risk for HIV.

Print materials to support CT services will be developed in collaboration with TRAC and are budgeted separately from CT service budgets. Additionally, this USG partner is procuring test kits for other USG VCT sites, including those run by EGPAF and IntraHealth.

Activity Narrative:

USG will increase access to quality CT services by adding 5 new sites and continue support to 12. USG will scale up CT at 5 new FY 05 PMTCT services sites to be identified jointly with TRAC/DSS. Another USG partner (FHI) will be procuring all the related test kits for this activity.

Activities include: 1). Train service providers in HIV pre-and post-test counseling.

2). Train counselors already trained in PMTCT in counseling for concordant and discordant couples. 3). Implement an "invitation" system to partners to encourage partner involvement 4). Provide support to women to mitigate potential violence or other negative outcomes of disclosing HIV+ status to make partners. 5). Carry out supportive supervision of services and link services with community mobilization efforts in the 17 service outlets and surrounding communities. 6). Develop and initiate a referral system for linking CT with prevention, care and support and treatment services.

Mechanism/Prime Partner:	USAID Community Svcs Procurement /	To Be Determined
Planned Funds:		

Activity Narrative:

In a Community Services Procurement will support CT by funding a "Community Services" Coordinator at all USG facilities, including CT facilities. This position will develop community resources to provide support to patients/clients. In particular, this position will assure that clients who test positive are offered timely support, referral to care, and follow-up until they are transitioned into care. This position will also reach out to families/partners of positives to offer CT. This position would liaise with TRAC, DSS, local government to assure that CT programs are coordinated, as well as advise local community groups how to apply for financing from the Community Services Procurement to provide local outreach and support to positives and to promote CT to high risk groups. This Community Services Coordinator will offer similar support to patients/clients of PMTCT, palliative/basic care and ART services.

Targets for CT are included in other implementing partners.

Table 3.3.9: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:	USAID Procurement/ HIV/AIDS Performance Based Financing /	To Be Determined
Planned Funds:		

Activity Narrative:

The HIV/AIDS Financing procurement will reimburse health centers and/or other sites performing VC1 according to formula(s) developed by health financing technical advisor supported at DSS. Reimbursement will reflect appropriate direct and indirect costs and indicators of quality. Illustrative examples of potential quality indicators include percent of partners tested and successful referral to health care to be determined by Rwandan and international finance and clinical experts.

As VCT integre sites are launched, USG will transfer its management responsibilities back to MOH/local management, with continued funding based on these formulas of productivity and quality of CT services. Sites would have authority to manage their budgets, but will be required to meet external review of quality with audit verification. During FY2005, this HIV/AIDS performance based financing model will be piloted in several health districts at approximately 9 facilities.

Current Program Context:

Total Funding for Program Area (\$):

Rwanda's National TB Control Program (PNILT) was created in 1990 and currently has 177 TB DOTS detection and treatment centers throughout the country. TB service delivery is also integrated into existing health facilities at the district and national levels. \n\nTo date, there has been no large-scale study conducted on TB and HIV co-infection in Rwanda-A USG study in two provincial hospitals between 2001 and 2003 showed that 31% and 33% of the TB patients agreeing to HIV tests were HIV positive, respectively. In 2002, the university hospital of Butare reported that more than half of its hospitalized TB patients who were tested for HIV were HIV positive. It is widely acknowledged that TB is the most common opportunistic infection affecting HIV+ people and a major cause of mortality among AIDS patients in developing countries. However, the links between TB and HIV services in Rwanda range from weak to non-existent, and little has been done at the national level to strengthen these links through policy development, training, etc. \n\nThe USG Strategy to integrate TB and HIV services includes support both at the central level for national coordination, norms and guidelines and at the facility-level for service delivery. At the central level, the Emergency Plan will provide support for the placement of a long-term TB/HIV technical advisor at the National Tuberculosis Program (PNILT), a local hire TB/HIV officer at TRAC, and for short-term technical assistance and funding for TB/HIV service integration, including national training and supervision. In FY05 the Emergency Plan assistance will revise national policies and program guidelines for the treatment and care of HIV/TB co-infected individuals. From these guidelines, specific training materials will be developed and used for training of healthcare providers at select sites. The USG will also support the development of two model TB/HIV outpatient centers where the rate of co-infection will be documented and evaluated. The model sites will also serve as centers of excellence for the integration of TB/HIV services which will inform integration of these services throughout the national program. For example, these model sites pilot routine HIV testing for TB patients and active follow-up of co-infected patients for other care and treatment. Ininin addition to these new TB/HIV integration efforts, in FY 2005 USG will continue to incorporate TB management of PLWHA into Emergency Plan treatment activities. The Emergency Plan supports training for all ART providers in the country on TB management of HIV-infected patients. Completion of this training is a prerequisite for certification of any new ART site operating in Rwanda. USG-supported ART sites will provide TB treatment and/or referral. Additionally, USG-supported ARV sites and VCT sites at or near TB services will actively promote and/or provide VCT to TB patients, and link HIV-positives to care and treatment. \n\nThese activities will be executed in collaboration with PNILT, TRAC and the Global Fund, which recently approved a Round-Four proposal in Rwanda to improve TB control. The Global Fund 4 grant will improve treatment and detection of TB, especially of women, improve detection and treatment of MDR TB, and upgrade TB management systems. Areas of collaboration will include the referral of all TB patients for VCT, and active TB case-finding among HIV-infected individuals.\n

Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

HIV Support to RDF / Drew University

Planned Funds:

Activity Narrative:

Drew University will work with the Rwandan Defense Force to improve HIV care for military personnel, their partners and families of military personnel, and community members who live in the surrounding areas.

Approximately 60% of the people who receive VCT services within the military setting are civilians. Specifically, the project will improve treatment of OIs, STI and TB among people living with HIV by military providers, improve treatment adherence, psychosocial support services and diagnosis and treatment of mental health problems at Kanombe, Ngarama and Kadhua Hospitals, 4 fixed VCT sites and 2 mobile VCT sites. In addition, Drew University will strengthen the capacity of the RDF to link people with HIV diagnosed at military VCT sites to treatment, prevention and care services as well as link people seen at hospital sites to community services.

Activities and Expected Accomplishments

- Provide on site training and supervision to 21 providers in diagnosis and treatment of OI, STI and TB
- Provide technical assistance for the development of training manual for treatment adherence
- Develop guidelines on mental disorder diagnosis and treatment.
- Train 18 providers in treatment adherence and mental health diagnosis and treatment (6 each hospital).
- Train and support 15 HIV positive peers in treatment adherence and psychosocial support
- Enroll all soldiers and civilians with HIV receiving staging evaluation and care at one of the military medical centers in 5 day intensive program in treatment adherence, prevention of Ols and HIV education, healthy living with HIV and HIV transmission risk reduction
- Provide care to 1,100

Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

IMPACT / Family Health International

Planned Funds:

Activity Narrative:

USG will finance these activities for six months through this financing mechanism until basic health care and support activities are picked up in the "Community Services" procurement. The procurement will continue and expand these effective 3 activities.

- 1. RRP+, a network of Association of People Living With HIV/AIDS, currently works with 20 RRP+ Associations to deliver home-based care to HIV patients. RRP+ will continue supporting these 20 associations through the national network.
- 2. SWAA/Rwanda; SWAA has developed a strong and innovative portfolio of activities for supporting the HIV infected and affected. They conduct thematic media campaigns (nationwide) and manage three HIV centers (in Kigali, Gitarama, and Kibungo). These centers operate as information centers and points of referral and support for people in need of HIV services (including OVC). Their approach to micro-financing for HIV-infected and affected persons (with technical assistance from AMIZERO) is very effective. USG proposes to continue supporting SWAA's three HIV centers during the six month transitional period.
- 3. AFRICARE. In Gikongoro Province, AFRICARE provides home-based care, operates a CT center in Gikongoro Ville, implements youth peer education and OVC activities in select districts. AFRICARE recently received alternative funding in the field of food security and agriculture extension. The peer education work will now be covered under their new food security grant. For the duration of the six month transitional period, USG will continue supporting AFRICARE's home-based care and CT services.

Program Area: Palliative Care: Basic health care and support Budget Code: (HBHC) Program Area Code: 08 Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: USAID Community Svcs Procurement / To Be Determined Planned Funds: Activity Narrative: Through the Community Services Procurement, USG will provide direct grants to faith-based or community organizations, and/or APLWHAs that provide palliative, basic care and/or home-based care to PLWHAs. Awards and award criteria will be made by a review board, composed of Rwandans and USG representatives, approved by the Emergency Plan Steering Committee. Palliative/Basic Health Care services will include outreach to homes/families of HIV/AIDS patients at USG supported health sites for care and support of medical treatment, symptom alleviation, emotional and physical support, pain relief, assistance with personal hygiene and eating, personal care commodities, food, clean water, mosquito nets or other activities linked to palliative care and/or health maintenance of PLWHA At provincial and national levels, the Community Services Procurement will strengthen national coordinating bodies for basic/palliative care. Policy development to define better coordination mechanisms and a minimum package of basic care for PLWHA will be supported. The USG will hire Community Services Coordinators (community residents, preferably with health backgrounds) at all USG sites to work with community organizations to coordinate care and support of patients/PLWHAs. These coordinators will assist community groups to apply for grants from this procurement to provide palliative/basic health care services. Coordination of community groups will support consistency and quality of services. provision of a common minimum care package, development and utilization of patient education material, training in care provision protocols, and leveraging/coordination of food donations. Linkages will be developed between national and district areas of Rwanda to assure that community organizations have access to nationally developed tools to assist in home-based care, such as protocols for lay health workers, commodities, patient care materials. The implementer will build capacity and/or develop a "National Umbrella Organizations" for CSOs Engaged in Palliative care/support activities to manage sub-grants and agreements with community organizations and assure coordination or services. This procurement will be developed quickly to minimize gaps between current activities and new activities under the procurement. Criteria for awards will be

This procurement will be developed quickly to minimize gaps between current activities and new activities under the procurement. Criteria for awards will be developed jointly with GOR and USG, consistent with USG regulations. Development and approval of work plans will occur jointly with USG and GOR designated team.

Providing food as a part of the package of palliative care will be done through this procurement.

Page 142 of 272

Program Area: Palliative Care: Basic health care and support **Budget Code: (HBHC)** Program Area Code: 08 Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: USAID Procurement/ HIV/AIDS Performance Based Financing / To Be Determined Planned Funds: In Rwanda, financial barriers are the major barrier to basic and palliative care for **Activity Narrative:** most PLWHAs. Increasing access to basic/palliative care has not been a high donor priority for HIV/ADIS. Yet, opportunistic infections and common treatable illnesses; are the major causes of mortality for people on ARTs as well as other PLWHAs. USG will expand funding of OI, basic and palliative care to USG sites that provide CT, PMTCT services. The HIV/AIDS financing procurement will address financial barriers to palliative and basic health care using two mechanisms. The first mechanism, community-based financing to cover drugs, outpatient visit costs and lab, will increase access to primary health care for PLWHA. To minimize financial risk to community-based financing programs, premiums for PLWHA would need to be adjusted or re-insurance considered. The advantages of community-based insurance, such as increased access for PLWHAs to primary care (thus reducing hospitalizations) and involvement of local communities in the management of their health center, will be coordinated with the performance-based component of this procurement. There will be greater community involvement resulting from both the Community Services Procurement and community-based financing of basic care. This financing would only be for PLWHAs for basic/palliative care, including Ols. Through performance-based reimbursement, health centers will receive funding linked to the provision of basic/palliative care to PLWHAs. Since basic/palliative health care covers a range of conditions, possible indicators likely to be linked to reimbursement are number of unique patients with HIV/AIDS receiving care at the health facility and total number of patient visits for HIV/AIDS patients. Another indicator may be number of patients treated for Ols according to national standards Performance-based reimbursement of palliative care will be piloted at 9 sites in 2005. Community-based financing and/or insurance premium payment for PLWHA and performance-based reimbursement will be piloted in several health districts in 2005. Lessons learned will be incorporated in plans for national scale-up the following

Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

WR Supplement / World Relief Corporation

Planned Funds:

Activity Narrative:

This funding will support continuation of this financing mechanism for essential services for six months until the "Communities Services" procurement becomes operational.

In 2004, many church congregations been mobilized in HBC, with 550 active HBC volunteers in eight of the twelve provinces. In FY05, these volunteers receive further training in specific palliative care methods. In addition 200 new volunteers per province will be trained in HBC in Ruhengeri, Kigali-Ville, Butare and Gisenyi. This will lead to a total of 1350 active volunteers by the end of 2005 and 6000 PLWAS cared for in the community.

Nutritional support WR will support 20 Churches who have established PLWA associations with nutritional support. Under FY05, seeds and tools will be given to the churches to grow food for PLWA for nutritional supplement.

Palliative Care curriculum will be developed focusing specifically on the care of the dying in consultation with the National Network of PLWA and the CNLS. This Distribution of Palliative/HBC kits will provided through church volunteer structures. An estimated 2400 kits will be distributed and/or replenished. The contents of the Palliative/HBC kit will be developed with the CNLS and other local and international partners, and allow HBC volunteers to adequately care for PLWA in their homes.

Mechanism/Prime Partner:

CORE Care / CARE USA

Planned Funds:

Activity Narrative:

USG will finance these basic health care and support services for PLWA for 6 months until the new "Community Services" procurement is awarded. USG will support partnerships with more than 200 PLWA associations to provide basic health care at the community level and strengthen health centers to ensure patient follow-up. Community volunteers and contractual nurses will be trained to improve community-based care. Services will include palliative care, counseling on positive living, and economic support.

Specific activities include: support to USG clinical sites, home based care, economic activities/financing for health services access, malaria prevention among PLWA, suport of PLWA associations/networks, ITN distribution, health promotion, 1600 bedridden PLWHAs will receive assistance. Number of people: 72 cases managers and 168 ones trained in patliative care, 800 community volunteers, 10,000 family members/caretakers reached.

Current Program Context:

Rwanda has an extremely severe problem with OVCs, ranking among the world's highest in percentage (17%) of children under age 18 who are orphans. The total number of orphans is estimated to be 810,000 with 160,000 of these being orphans due to HIV/AIDS. While the majority of Rwandan orphans are currently the result of the 1994 genocide and subsequent years of civil conflict, UNICEF estimates that by 2010, orphans due to AIDS will constitute 52% of all orphans. IninSince the genocide, Rwandan families, communities, FBOs, and CBOs have responded generously, despite dire poverty, to welcome OVC into homes. However, OVCs compete for already scarce resources. \n\nThe proposed Rwanda COP05 OVC programs build on the existing strengths of local communities and local organizations to provide for their children. This plan incorporates achievements and addresses lessons learned from COP 2004. Increased coordination among implementing organizations is critical to provide equitable support across the country without major gaps. COP05 will strengthen governmental systems and community structures; reduce fragmented and duplicative operations of USG COP04 projects; apply a unified approach to meet the needs of OVC across all donors and partners (e.g., agreement on "package of services" and its delivery); increase gender equitable service access; and produce data on a common set of core monitoring and outcome indicators across projects for the GOR's National Plan for Action for OVC. \n\nFor 2005, in six provinces, USG in Rwanda will competitively procure services for OVC's, replacing field support mechanisms and prioritizing Rwandan organizations. While field support did deploy assistance quickly to OVC, there were large geographic gaps, inconsistent approaches and variable benefits. The proposed procurement includes national; regional and community strengthening as well as direct grants to local organizations that support OVC. Current implementers that are providing services to OVC are continued for six months of 2005 to minimize risk of gaps in service. Prioritized services include: access to health care, school fees, food support, income generating activities or micro-credit and psychological support. To fully understand issues facing orphans, a "situation analysis" will be done. A third priority is to develop a single national benefit package (that includes school fees and access to basic health care). A fourth priority is to leverage food aid. This procurement will balance direct support of OVCs with developing national coordinating mechanisms to most advantageously use donor support. With Rwanda's unique country context (strong central government, strong churches, strong community responsibility, 1300 elected local community health . animateurs) and the recent history of genocide, a local procurement will build on Rwanda's strengths of its communities and respond effectively to the needs of its children. Activity Narrative

COP05 will finance services for OVC through the "Community Services" competitive procurement. Rwandan communities have already demonstrated their capacity and expertise in caring for OVC. In 2004, USG multi-country partners did not coordinate services effectively in Rwanda and there was significant duplication and gaps in coverage. The GOR has developed recently a National Plan for Action for OVC to coordinate donors and in-country organizations. This coordination will include: technical assistance to MIGEPROF, provincial governance assistance of community level services, a "situation analysis" for a better qualitative look at actual circumstances of OVCs.

The "Community Services" procurement will build on the NPA to assure that community organizations are well coordinated. The implementer will provide support to the ministry to define a minimum package of services for OVCs. The procurement will include national, regional and community strengthening as well as direct grants to local organizations that support OVC. Additionally, a "situation analysis" will be funded by the implementer as recommended by National Action Plan, to guide services for OVCs. The implementer, through a riational board and close work with provincial, administrative and sector governance, will rapidly provide grants to current organizations providing services to OVCs and their families, provide school fees, cover health care costs and other support for OVCs across six provinces. The implementer will quickly identify existing organizations that can distribute minimal package of services efficiently to OVCs and cover USG-designated geographic areas. Priority geographic areas will start with continuing existing coverage, then extending out from all USG-supported care sites, then addressing gap areas. Numbers of OVCs provided direct support emphasized. The benefits package may be prioritized based upon community input but will include: 1. "pre-payment" health cards to increase access to basic health coverage, especially for children living with HIV/AIDS. 2. Assistance with covering basic/vocational school-related expenses. 3. Improved income generating opportunities among OVC such as vocational apprenticeships, farming skills, etc. 4. Activities to meet psychosocial needs of children such as home-based care, community outreach, peer support, offering of sport and cultural activities, adult mentoring, and individual counseling. 5. Economic assistance for OVC families including linkages with the private sector (esp.coffee and tea plantations) community banking, savings and loan schemes, IGA training for women's groups, etc. Rapid deployment of services in the field and rapid support local, district, provincial and national Rwandan organizations are technical procurement criteria.

This USG activity's OVC care and support initiatives are based in a national network of congregations mobilized for AIDS programming. Activities include: 1. Raise awareness of OVC issues and recommendations for church response in all participating churches (ON-GOING ACTIVITY). Using existing "Our Children" curriculum designed for church audience, this USG partner will conduct 1-day workshops with 800 new local church leaders and volunteers in six provinces on identification, care and support of OVC in their communities. 2. Support to churches for provision on minimal service package to OVC. Using churches' care programs, USG will subsidize unmet needs to provide a minimum package of benefits to all identified OVC within the criteria framework of the church. This package will include a) school fees, books and uniform for nearest government school, b) annual contribution to each OVC health expenses, c) regular monthly visits by church volunteers to assess needs, physical health and provide psycho-social support; Livelihood development program for select OVC. 4. WR will identify local crafts people (i.e. carpenters, tailors, bakers, bicycle repair) who are receiving small loans from local microfinance institutions, who are willing to serve as mentor/teachers for 30 OVC to learn a livelihood.-USG will provide sub grants to atleast 3 churches to develop their own sustainable OVC care programs. These structures may include care to OVC in the community, income generation activities for OVC and caregiver groups, etc. **Activity Category** % of Funds ☑ Community Mobilization/Participation Human Resources 19% Local Organization Capacity Development 28% 5% Logistics Strategic Information (M&E, IT, Reporting) 5% ☑ Training 5% Targets:

Mechanism/Prime Partner:

CORE Care / CARE USA

Planned Funde:

Activity Narrative:

USG will continue 6 months of funding to continue essential services until a new procurement for Community Services is awarded.

Activities:

- Further selection and training of volunteer mentors (100 per province).
 Establishment of an advisory committee (local authorities, local partners, volunteer mentors CHH) in each province. Formation of volunteer mentors associations / networks. Distribution of bicycles to volunteer mentors
- 2. Support essential services: education, food/nutrition, shelter, protection, health care, psycho-social support and income generation of child headed households (CHH) (500 CHH per province; 500 CHH equals approx. 1600 OVC). Facilitate food and basic health care/mutuelle access through gardening, small livestock, savings promotion and micro economic activities (linkage to food aid providers in worst cases). Education (primary, literacy-life skills, business/vocational for older kids). Psychosocial support through volunteer mentors, counseling, community activities, sport and culture. Distribution of essential household items
- Increased capacity of national, provincial, district, and community government structures of National Plan of Action for OVC.
- 4. Increased supportive environment for OVC and their families by formation of associations of CHH/OVC. Advocacy for the prevention of abuse and assistance to girls reporting unwanted pregnancies. Reinforcement of child protection systems through training and facilitated access to mediation and legal aid services for OVC.

Table 3.3.10: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM
Mechanism/Prime Partner: RPM+ / Management Sciences for Health
Planned Funds:

Activity Narrative:

This activity will provide technical assistance to CAMERWA (the only allowed procurement agent for ARVs in the country) to increase its capacity to support scale up of ART in Rwanda, to integrate processes for drug management throughout the country, and to improve availability of essential drugs for HIV/AIDS treatment.

The success of scaling up comprehensive ART in Rwanda depends, among other factors, upon CAMERWA's capacity to making the drugs available in the country, USG will improve procurement procedures (efficiency and integrity), storage (physical capacity and management), distribution mechanisms, quantification of pharmaceutical needs, and quality assurance / quality control internal systems (QA/QC). USG will develop: adequate internal mechanisms to monitor and evaluate performance (M&E); USG will assist in collection and management of adequate internal and external information (MIS), and USG will build human capacity. USG will also assist with the expansion and rehabilitation of the current stores in Kigali, and the implementation of three regional depots as a new strategy to improve distribution of drugs.

USG will continue to support an international senior expert with broad experience in the pharmaceutical sector (Senior Program Associate/CAMERWA). Other MSH staff members in Kigali and worldwide will provide specific advice or support in order to implement the technical activities described below.

- Technical advice and Procurement of Equipment: The expansion of stores and the implementation of regional depots will require an important investment on equipment, such as, but not limited to, furniture (shelves, cabinets and tables), temperature-alarm for cold room, pallets, forklift trucks, refrigerators, generators and an incinerator. USG will contribute with procurement of equipment, prioritizing furniture and forklift trucks for expansion and rehabilitation of central stores.
- TA for reviewing/developing operating procedures:
 - a. Development and/or adaptation of SOPs at regional depots
- b. Revision of SOPs to manage expanded stores and increased number of clients.
- c. Integration of all new and existing SOPs

3)

- TA in procurement and distribution of drugs:
- _a. Development and/or update of national procurement plans which should include quantification of drugs and procurement strategy, and good procurement practices to ensure quality, efficiency and integrity.
- Development of a distribution system of pharmaceuticals to regional depots, and from regional depots to facility sites, according to available resources.
- c. Training for staff at regional depots will be identified and training conducted to ensure that adequate practices of procurement and distribution of drugs are followed.
- 4) TA for store management and QA/QC: CAMERWA has requested USG to provide additional training in QA/QC and technical assistance to improve their internal system according to international regulations (or national when developed), to adapt some elements to ensure quality at regional depots, and to establish a system for M&E.
- 5) TA for MIS: Development of MIS plan for the regional depots. This will require assessing the adequacy of implementing the software that CAMERWA uses for drug, financial and administrative management at regional level, and decision making according to analysis of options.
- 6) TA for other areas: During the last quarter of COP 04, USG plans to conduct some assessments in the areas of human resources and financing and as such new activities related to these areas might be identified.

Total Funding for Program Area (\$):		
--------------------------------------	--	--

Current Program Context:

Rwanda's national scale-up of ART service delivery is well underway through the Emergency Plan, Global Fund, and the World Bank MAP. As of August 2004, 5,082 people are receiving ARV therapy in Rwanda. Given that only 900 Rwandans were receiving treatment in November 2002, this increase reflects a significant expansion in patients' access to treatment in the last two years. USG is a major contributor to this expansion through support for the first district nospital providing ART and for the design and implementation of a provincial ART service delivery network model implemented by TRAC in partnership with USG and World Bank MAP. USG established critical lessons for ART expansion outside of Kigali in both rural and urban areas. In FY 2004, the USG plan directly supports 42 ART sites. In Inin addition to ART service delivery expansion, the USG effort will continue to provide technical assistance to national institutions at the central level. The assistance is primarily focused on TRAC and CAMERWA, the lead institutions for overseeing treatment implementation and commodities management, respectively. Key areas of assistance are: regular revision of national guidelines and policies, refinement and use of data collection and logistics tools and systems, training and ART service delivery quality improvement in in FY 2005, the USG will provide-direct support to a total of 80 sites for treatment services for 42,767 individuals.-In accordance with-Rwanda's national treatment plan, USG site-support is focused in eight provinces with select sites in Kigali, Clinical service delivery support will be complemented by adherence strategies implemented by health care personnel and community members.\n\nUSG and GOR have decided to add two additional USG implementing partners to expand ART services. These two partners already have experience working with TRAC, in the areas of PMTCT and C&T, training and performance improvement. Expanding the activities of these partners allows more rapid expansion of ART services to currently underserved provinces as well as provides the opportunity to implement their competitive advantages into the ART program in in future years (not 2005), USG and GOR expect that management of ART services will be mainstreamed into the health care service delivery system, with the continued support of donor funding. The transfer of CT and PMTCT services management through HIV/AIDS performance-based financing will serve as the model for the eventual mainstreaming of ART services vn\nCentral level support will include assistance to TRAC for quarterly ART national training and centralized production of all treatment-related forms, guidelines and educational materials. In order to assure treatment-related commodity security, training and supervision of pharmacists will be supported, as well as upgrades to pharmacy sites. USG will continue support for quality improvement approaches including an ART "collaborative", a model for joint learning across sites offering the same services. During FY 2005, this approach will be institutionalized at the Ministry of Health's Department of Health Care Services (DSS). In Info FY2004, USG began a pediatric HIV treatment and care initiative focusing on national pediatric policy issues, establishing a strong training program and developing centers of excellence for pediatric care, beginning with the Central Hospital of Kigali. USG will expand this initiative to develop other centers of pediatri expertise, namely, the University Hospital in Butare and select health centers. To support this pediatric service delivery expansion, USG will build capacity at the National Reference Lab for early infant diagnostics. In

Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Columbia UTAP / Columbia University Mailman School of Public Health

Pianned Funds:

Activity Narrative:

Columbia/UTAP will support the GOR Treatment and Care Program through technical, planning and professional development support to TRAC. A main component of this support is the continuation of a long-term Technical Advisor in the TRAC Care and Treatment Unit. Short-term technical support for HIV clinical care will be provided in the areas of training, policy and treatment norms. Specific activities will include:

- 1. Establish and update National HIV/AIDS care and treatment policy, norms, and training curricula in the areas of ART; OI and nutrition;
- Support the National HIV care and treatment trainings;
- Review, revise and test standard HIV care and treatment clinical forms, reporting tools and supervision tools;
- Support TRAC to facilitate National ARV Technical Advisory Committee;
- Improve the technical capacity of TRAC Care and Treatment Unit to implement programs through conferences, study tours, and the purchase of professional materials and publications;
- 6-Support-TRAC to conduct two evaluation studies on HIV care and treatment and to develop an annual report tracking progress of the national ART scale up.
- 7. Technical support for adult learning techniques to strengthen the cadre of national expert HIV technical trainers (75 expert trainers will be trained)
- Support TRAC to implement a referral system for women in PMTCT services to HIV care and treatment in 25 sites within 3 districts.

Columbia University/UTAP will also provide support for a Pediatric HIV Treatment and Care Initiative. The initiative will focus on establishing model centers of pediatric HIV care, formalizing national policies and norms, training experienced HIV clinicians from around the country, and improving identification of pediatric cases and access to care. A main component of this activity is the renewal of a sub agreement to TRAC to establish model pediatric HIV treatment programs and to treat an additional 200 pediatric patients with ART. Support will also be provided to the National Reference Laboratory to improve its PCR testing capacity. Specific activities will include:

- Support TRAC to develop national policies and protocols related to HIV pediatric care and treatment
- 2. Develop a national pediatric training curriculum and train 200 providers from all provinces
- Support model centers of pediatric HIV care and treatment at CHX and University Hospital of Butare, including additional hospital staff and operating expenses
 Continue ART for 200 children and treat 200 new children
- 5. Conduct ongoing follow up training, clinical supervision and quality assurance at
- 6. Support TRAC to develop a referral and follow up system to ensure appropriate referral of HIV positive infants from health centers to pediatric care
- 7. Support a laboratory technician position at the National Reference Laboratory to manage PCR testing

Activity Narrative:

This program will strengthen the capacity of the pharmacy at ART facility sites and district pharmacies to provide quality services in support to comprehensive ART programs.

To strengthen 40 pharmacies at ARV clinical care sites and 20 District Pharmacies, USG (in coordination with TRAC and DOP) will:

- 1) Scale up basic training of pharmaceutical management to train larger numbers of pharmacy staff at ARV sites and District Pharmacies.
- a. Provide additional pharmaceutical management training to general HIV/AIDS training that TRAC provides. (Around 10 ARV sites and 5 District Pharmacies will be invited to each course, held every 2-3 months.)
- b. Identify and train pharmacy staff at existing ARV sites to be trainers of other pharmacy staff at new sites. (Ideally at least one per district, where ARV sites have started implementation of SOPs).
- 2) Scale-up implementation of SOPs at ARV pharmacies and District Pharmacies, which have attended the general training course (1.a). SOPs to be implemented include store management and inventory control, ordering and reception of goods, record keeping, good dispensing practices, rational use of drugs, drug MIS, good dispensing practices, etc. Implementation of SOPs requires:
- a. Develop specific and customized training in how to use/follow SOPs at each site.
 - b. Adapt SOPs if required...
- c. Monitoring and evaluation of improvements on actual pharmaceutical management procedures to be in accordance with written SOPs. Monitoring will include (not restricted to) stock outs, expiration of drugs, implementation of security stocks, quantification, scheduled ordering/reception of goods, and inventory control.
- d. Strengthening pharmacy staff in good dispensing practices and rational use of drugs (confidentiality, pharmaceutical counsel, and adverse drug reactions.)
- e. Periodic supervision of SOPs implementation, including identification areas requiring additional training.
- 3) Establish procedure for updating/reviewing SOPs at national level. (First revision update to be finalized in quarter 4, after one complete year implementation.)
- Scale up pharmacy capacity by improving basic infrastructures at those ARV sites implementing SOPs.
- a. Assess pharmacy capacity for quality storage and good dispensing practices, through a rapid assessment tool developed.
- b. Determine need for upgrades in infrastructure necessary to implement SOPs.
- c. Prioritize and agree with authorities of each site the kind of intervention that USG will support, according to funding limitations. These might include, but not restricted to, procurement of shelves, filling cabinets, locked cupboards, and/or habilitation of space for confidential dispensing.
- 5) Improve Drug MIS at target ARV sites and District Pharmacies, which are implementing SOPs:
- a.Develop and implement tools to collect and process relevant information for internal drug management (integrated with SOPs).
- b. Assess capacity to introduce MSH software for ARV management, and implement it when adequate. (It is not always adequate to introduce software at pharmacy level).
- c. Assist with integration into existing national MIS (TRAC net and SIS), by ensuring that pharmacies can provide the data needed to sustain the national MIS.
- d. Identify additional information needed for national pharmaceutical management (at CAMERWA, DOP, SIS and/or TRAC), and assist in establishing the mechanisms for data collection at facilities.
- 6) Improve Human Resource organization at ARV pharmacy sites:
- a. Advocate and assist in defining and expanding roles/responsibilities of pharmacy staff at ARV sites, according to performance improvement.
 - b. Integrate roles of pharmacy staff in plans for scaling up ART at each site.

NOTE: These activities will contribute to treatment targets identified by other partners implementing ART services.

Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

IMPACT / Family Health International

Planned Funds:

Activity Narrative:

USG partner currently supports or is in the process of establishing ARV services at 12 health center and district hospital sites. In FY05 services will be expanded to an additional 7 sites throughout the country. Integrating ARVs into a health facility necessarily follows the roll-out of VCT and PMTCT services and requires the completion of three key steps: (i) upgrading health facility rooms and infrastructure to accommodate HIV patient care; (ii) procuring furniture, materials, and equipment, and (iii) training clinic and lab staff.

In FY05 this USG partner will:

 Initiate ARVs in an additional four health center sites in Gitarama, one additional health center in Ngarama, and one in Gikongoro, which will be supported by rotating MDs based at nearby district hospitals.

- 2. Initiate ARVs in Ngarama District Hospital in Byumba Province;
- 3. Develop and establish more CT and PMTCT services at clinic sites in Byumba and Gikongoro in preparation of ARV scale up in the provinces in FY06; and
- 4. Hire additional personnel, including MDs, nurses, and laboratory technicians as needed by individual sites. The mechanism for hinng will be developed in consultation with the GOR and the USG.

Budget Code: (HTXS)
Program Area Code: 11

Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: HCD / IntraHealth
Flanned Funds.

Activity Narrative:

This activity will add ARV services to HIV/AIDS care and prevention activities at 2 PMTCT/VCT service outlets. They will treat 300 patients at two new ARV sites to expand USG ART coverage to underserved provinces. FHI will be financing drugs for these sites in accordance with GOR national ART drug policy.

Treatment at these two health centers will be linked with prevention efforts. For example, clients testing positive following CT services will be referred to health care providers who will assess if they are in need of ARV treatment. Clients who do not yet qualify for treatment will be linked to care services until ARV treatment is needed.

This activity will strengthen the capacity of laboratory and health care providers for ARV prescription and case management at two health centers.

ARV adherence and community support activities will be funded through the Community Care procurement. The activity also includes: Train health care providers to prescribe ARV and provide follow up.Improve lab capacity to include ARV monitoring. Procure and supply lab equipment (biochemistry test equipment, hematology-test equipment) for ARV case follow-up. Support development of two way clinical referral network with district hospital ARV site to strengthen cost-effective high quality ARV service delivery. Monitor ARV case management and treatment success.

Mechanism/Prime Partner:

QAP / University Research Corporation, LLC

Planned Funds:

CAP / University Research Corporation,

Activity Narrative:

With Emergency Plan 1.5 and 2.0 funds, USG launched an improvement activity "ART Collaborative" where staff from 20 sites in 6 provinces in Rwanda collaborate, based upon site experiences, to improve the quality and efficiency of ART services.

In FY05, the ARV collaborative, which started in FY2004 will end and will transfer management capacity of continuous quality improvement to the Department of Health Services. After 2005, USG will contract directly with Department of Health Services, and work with the performance-based health financing TA activity (See HIV/AIDS financing procurement discussion) for quality improvement activities in HIV/AIDS services delivery.

With FY '05 funds, the current ART Collaborative will extend from 20 to 40 sites. In addition, USG will strengthen capacity of DSS by training 12 district supervisors (2 in each of the 6 provinces involved) and central DSS PIU staff to manage HiV/AIDS collaborative improvement activities

To avoid duplicate counting of patients, the number of patients (12,000) treated by sites participating in the ART collaborative is not included. However, the number of health workers trained and number of sites participating is included.

An evaluation of "The Collaborative Approach in Rwanda" will be conducted under 2004 Emergency Plan funding. If results of the evaluation are positive, USG will write up their achievements, including lessons learned for specific ARV services improvement, as a manual to share nationally, via Department of Health Services.

Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Columbia/MCAP / Columbia University Mailman School of Public Health

Planned Funds:

Activity Narrative:

Columbia University will continue to work in partnership with the GOR to provide direct financial and technical support to TRAC for the implementation of ART programs in Kigali and the provinces of Kibuye and Gisenyi. The Columbia MCAP program will create HIV treatment and care networks in two provinces. During the first year (FY04) in Kibuye and Gisenyi, support focused on establishing services at the district hospital level. In year two (FY05), services will be expanded to the health center level and a referral system will be established between the two levels of service. By the end of FY04, 14 ART sites will be established in Kigali, Kibuye, and Gisenyi, and 1,000 patients will have begun ARV treatment. In FY05, support will continue to the year one sites/patients, and 10 new sites will be added, with an additional 1,389 patients on ART.

In FY05 Columbia University will continue its contractual relationship with TRAC for co-implementation of the program at 24 sites. Columbia in-country staff will build technical and program management capacity at TRAC by working together on a daily basis with TRAC counterparts to implement the program.

Specific activities for FY05 will include:

- Establishment of 10 new sites: Columbia will support TRAC to establish 10 new sites in Kibuye, Gisenyi and Kigali. Activities will include site baseline assessments, site preparation (including renovation), hiring staff, and establishing relationships with local community based programs supporting PLWHA.
- 2. Training: TRAC will coordinate training for key staff from the new sites, and additional staff from year one sites as necessary. These individuals will participate in the National HIV Care and Treatment training which is held every two months in Kigali. Following the training, and just prior to the initiation of services at a given site, staff will participate in a 2-week practicum training at an experienced HIV treatment site such as CHK, Kicukiro Health Center or TRAC Clinic. When services are launched, a Columbia technical staff member along with counterparts from TRAC will spend two or more weeks on site to provide mentorship and on-site training and technical assistance. Columbia will also provide on-site training and support to laboratory staff at the 24 sites.
- 3. Site supervision: Columbia technical advisors and TRAC staff members will provide ongoing support to the sites through periodic supervisory site visits to advise on all technical and management aspects. Mechanisms will be developed to assess quality of services at sites and make recommendations for ongoing quality improvement. In addition, Columbia staff will support TRAC to develop tools that will assist sites to manage their programs and support patients (e.g. referral cards, adherence educational materials, and quality improvement tools).

CDC laboratory experts will work with National Reference Laboratory (NRL), TRAC and APHL to develop procurement lists for health centers. (APHL will procure these supplies). CDC laboratory experts, in collaboration with Columbia UTAP, will assist NRL and TRAC to develop a laboratory supervision plan and tools for monitoring laboratory performance. CDC will assist NRL and TRAC with supervision visits to monitor laboratory practices, including CD4 testing, at ART laboratory sites. CDC lab experts will support the NRL to develop capacity and implement new laboratory tests for OI diagnosis in provincial ART laboratory sites. An assessment will be conducted with TRAC and NRL to generate the list of new tests and priorities. Possible new tests include cryptococcal meningitis, PCP, Chlamydia and ELISA capacity for other viral diseases. (APHL will procure necessary equipment and reagents). In collaboration with Columbia UTAP and EGPAF, CDC will provide short-term technical assistance for the development of a pediatric HIV/AIDS program including capacity building for CHK and Butare reference hospitals and participation in revision of national norms and guidelines.....

Mechanism/Prime Partner:	Columbia MCAP	Supplement / Calumbia	. University Mailman	School of Public Health
Planned Funds:				•
-				

#### **Activity Narrative:**

This activity is a supplement to Columbia University MCAP Track 1.0 mechanism. This supplement will expand ART services to the health center level in two provinces, Butare and Cyangugu. In FY2003 and 2004, USG provided technical assistance to the TRAC (MAP) for ART service delivery at the hospital level in these two provinces. With this additional support, USG will complete the network by linking health center, district hospital and provincial hospital sites. (Note: Care activities for these 6 sites are located under the Basic Care section; ARV drugs for this activity are located under ARV drugs)

By the end of FY05, 400 patients will be treated with ART at 6 health centers in Butare and Cyangugu provinces.

Specific activities for FY05 will include:

- Establishment of 6 new sites: Columbia will support TRAC to establish 6 new sites in Butare and Cyangugu. Activities will include site baseline assessments, site preparation (including renovation), hiring staff, and establishing relationships with local community based programs supporting PLWHA.
- 2. Training: TRAC will coordinate training for key staff from the new sites, and additional staff from year one sites as necessary. These individuals will participate in the National HIV Care and Treatment training which is held every two months in Kigali. Following the training, and just prior to the initiation of services at a given site, staff will participate in a 2-week practicum training at an experienced HIV treatment site such as CHK, Kicukiro Health Center or TRAC Clinic. When services are launched, a Columbia technical staff member along with counterparts from TRAC will spend two or more weeks on site to provide mentorship and on-site training and technical assistance. Columbia will also provide on-site training and support to laboratory staff at the 6 sites
- Site supervision: Columbia technical advisors and TRAC staff members will provide ongoing support to the sites through periodic supervisory site visits to advise on all technical and management aspects.

Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: USAID Community Svcs Procurement / To be Determined

Planned Funds:

Activity Narrative:

The Community Services Procurement will include activities to improve ART adherence. AR1 tácilities will support mechanisms to improve patient adherence with recommended ART treatment. Each USG facility will employ a Community Services Coordinator to support community groups that are in turn supporting HIV patients at ART facilities and health centers providing C&T, PMTCT and OI care. These mechanisms may involve community support groups or non-clinically trained community members who may act as "buddies" to assure patient compliance. If poor adherence is due to socio-economic factors, adherence programs may also provide micro-enterprise support or direct food support. If poor adherence is due to other complicating illnesses, such as malaria or diarrhea from poor water, then adherence support mechanisms would include mosquito nets or water purifiers. If poor adherence is due to social vulnerability such as related to child headed households, other social or financial assistance may be required. The Community Services Procurement will review these mechanisms of adherence support and develop agreements with Community Organizations to fund these types of support if prioritized. While implementation of these activities may occur at the community level, there will also be comparisons and review of adherence support outcomes by the awardee, in conjunction with PLWHA umbrellas and ART treatment programs, to determine the most-cost-effective mechanism to improve adherence and to assure equity of financing of adherence support among ART

NOTE: this activity will contribute to the ART targets identified by other ART implementing partners.

CORE Care / CARE USA Mechanism/Prime Partner: Pianned Funds:

Activity Narrative:

This activity will continue for 6 months to deliver essential ART adherence suport until these activities are transferred into the Community Service Procurement. Adherence support includes: treatment literacy education, establishment of mentor system and provision of critical food items and supplies. A model of cost-effective adherence support that can be implemented on a broader scale at all USG art sites will be developed and transferred into the Community Services procurement responsibility.

for 6 months of FY05, activities initiated in year 1 will reach a total of 10,000 PLWHA including 800 people currently on ARVs.

Specific activities include: 1. Support to ARV sites by providing package of services including ARV treatment literacy to PLWA. 2. support a mentor system on a broader scale to include all USG ART sites in which PLWA select treatment mentors. Provision of food items, water purification kits and transportation subsidies to PLWA to enable them to adhere to treatment as possible on a broader scale. 3. Monitor ARV adherence rate together with ART facility and TRAC

NOTE: This activity will contribute to ART targets reflected under other partners'

ART activities.

Current Program Context:

There are two principal government entities responsible for HIV/AIDS strategic information in Rwanda, National AIDS Control Commission (CNLS) and the Treatment and Research AIDS Center (TRAC). CNLS oversees policy guidance and strategic leadership to coordinate monitoring and evaluation for the multi-sectoral national response to HIV/AIDS. TRAC is the entity responsible for HIV surveillance, clinical policica and guidelines, national curriculum development, M&E and overall coordination of HIV/AIDS clinical programs. The USG provides long- and short-term technical support and direct financial assistance to CNLS and TRAC to strengthen institutional capacity for strategic information in InRwanda has developed national plans for its response to the epidemic, including the National Strategic Framework for the Fight Against HIV/AIDS (2002-2006), a National Prevention Plan and a National HIV/AIDS Care and Treatment Plan, and a National Monitoring and Evaluation Plan. In the context of Rwanda's rapidly expanding program environment, the GOR is currently conducting a midterm review of all HIV/AIDS programs, which is expected to result in the revision of strategic framework and monitoring and evaluation plan Intelligence 2005, USG will continue to provide technical assistance to CNLS and its decentralized network (CPI.S and CDLS) to strengthen their capacity to plan, coordinate and effectively monitor and evaluate the national response. Key technical assistance will include financial management training for the decentralized CNLS network and local NGO's, updating the national M&E plan, and support for an information system for monitoring non health -facility-based interventions such as home-based care and BCC. Other assistance includes an HMIS assessment and the establishment of a sample vital registration system through verbal autopsy. \n\nln FY 2005, USG will continue to strangthen TRAC's capacity in HIV/AIDS clinical program planning, surveillance, and monitoring and evaluation through direct financial support and long and short-term TA. Key USG-supported activities will include continuing support for ANC sentinel surveillance, initiating drug resistance and HIV incidence surveillance, GIS capacity and data use, and maintaining TRAC's HIV/AIDS information clearinghouse. Other M&E support to TRAC will include HIV/AIDS program database support and use, capacity building for targeted evaluation activities, production of progress reports for major HIV/AIDS programs (Emergency Plan, Global Fund, MAP). USG will transfer to TRAC the management functions necessary for the maintenance and expansion of the TRACnet system, a telephone and internet-based information system for ART treatment, program monitoring and commodity monitoring. In collaboration with TRAC's information technology (IT) and applied statistics department, USG will expand IT infrastructure and data utilization capacity in 10 health districts to improve coordination and efficient data transfer and use between sites, district health teams, CPLS and other local officials responsible for monitoring HIV/AIDS programs. Table 3,3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: UTAP / Tulane University
Pianned Funds:

Activity Narrative:

Tulane University will continue to provide long and short-term technical assistance to TRAC, CNLS and other national partners for monitoring and evaluation (M&E) capacity building including the use of information technology. Tulane will continue to support a long-term international hire IT technical advisor at TRAC to build the Ministry of Health's technical capacity in HIV clinical service delivery database maintenance and use and other related IT interventions. In addition, Tulane will provide TRAC and CNLS with long-term monitoring and evaluation assistance by a senior M&E and capacity building officer and an M&E assistant and short-term assistance by Tulane faculty.

Tulane will provide technical assistance and training to TRAC for database management, program data use and reporting, maintaining an HIV/AIDS information clearinghouse for HIV data and reports, and geographic information systems (GIS) capacity building. Tulane will support TRAC to train 10 health districts (hospital, district health team, CPLS) in HIV reporting and database use. Tulane will also train TRAC, CNLS and implementing partners to incorporate data reliability assessments into their activities. Tulane will increase targeted evaluation capacity at TRAC. Tulane will assist TRAC in establishing a national working group to standardize IT equipment and software specifications for HIV/AIDS data______

In collaboration with JSI/Measure, Tutane will provide technical assistance to CNLS for the revision of the national M&E plan, and the adaptation of M&E and financial management training modules for use with Provincial AIDS Commissions (CPLS), District AIDS Commissions (CDLS), and local NGOs.

Tulane will assist USG and implementing partners for required USG quarterly progress reporting for GOR, and semi-annual reports for the Emergency Rian. Tulane will also maintain regular communication with Emergency Plan headquarters Strategic Information team.

Table 3.3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Measure Eval / University of North Carolina

Planned Funds:

Activity Narrative:

In FY05, USG will:

1.Continue strengthening the capacity for M&E within the CNLS and its decentralized structures, with a focus on data analysis and use

Focusing on implementation of the CNLS' National M&E Plan and strengthening the MIS for collecting routine data from the CNLS' multisectoral decentralized structures, USG will continue to build capacity of the CNLS and its partners in M&F Two resident advisors (M&E Advisor and Data Analyst/Use Specialist) as well as various US-based TA staff will provide support for activities including: 1) collection, management, quality control and use of data for production of national indicator reports and quarterly aggregate activity reports; 2) supervision of the CPLS (CDLS/sector representatives toward production of their quarterly activity reports; and 3) and updating the National M&E Plan as necessary.

The M&E curriculum, validated and tested in 2004, will be institutionalized with a local institution in 2005 and MEASURE will support the training of a second wave of trainers. The curriculum will also be adapted to "Tronc Common" format through a sub-contract.

USG will continue to support the functioning, development and use of the CNLS' MIS. The system will have been established during 2004, starting with a mapping of all HIV/AIDS programs and will be pivotal to the country's management of its community-based programs, in particular.

Data use will be a focus of all M&E TA. An assessment of data use, focusing on non-health facility-based HIV/AIDS activities will inform day to day as well as punctual TA.

Expected results:

- · Improved human resource capacity for M&E
- HIV/AIDS information systems strengthened
- Improved operationalization of National HIV/AIDS M&E Plan
- Data analysis and use improved at all levels of decentralized HIV/AIDS coordination system
- 2. Continue to facilitate communication and information exchange on M&E

Through CNLS/CPLS/umbrella members' USG-supported participation in international fora; lessons learned in Rwanda will contribute to international dialogues and Rwandan HIV/AIDS M&E capacity will continue to develop.

USG will support the CNLS, not only in production of reports such as the Annual HIV/AIDS Report and Mid-term Evaluation Report (including the data collection, cleaning, and analysis necessary to their production- see Obj. 1), but also in their dissemination.

Revitalizing and making best use of the Technical Working Group on M&E is a high priority of the CNLS (Secretariat of this TWG), and USG is well placed to provide both technical and financial support towards this goal. The guidance and support of this group are crucial as the National M&E Plan (which includes many of the core Emergency Plan outcome and impact indicators) is operationalized.

USG will support the CNLS in the implementation of a dissemination conference for its Annual HIV/AIDS Report in 2004, and proposes to continue this support in 2005 as the CNLS attempts to institutionalize this dissemination venue.

Expected results:

- Improved data dissemination and use
- · Improved human resource capacity for M&E
- Improved national coordination of HIV/AIDS monitoring and evaluation efforts
- 3. Support research and the development of new tools

Sample Vital Registration with Verbal Autopsy (SAVVY) is a methodology being adopted by various low-resource countries to quickly get a handle on death attributable to AIDS. In the absence of strong vital registration, but with an eye to building capacity for such a system, SAVVY quickly and inexpensively allows monitoring of this important impact indicator.

USG proposes a comparative assessment of the national HMIS structures and systems towards strengthening and streamlining the various systems that collect routine LIIV/AIDS information. An existing MEASURE tool, being used in other countries will be adapted and used in Rwanda.

The PLACE study, which will be completed in 2004, will generate rich data necessary to planning and monitoring prevention program coverage. The results of this study should be implemented fully, including triangulation of findings with findings from other studies such as the DHS+, BSS, etc.

Expected results:

President's Emergency Plan for AIDS Relief

Country Operational Plan Rwanda FY 2005

- SAVVY launched
- · HMIS assessment (including consensus workshop) conducted
- PLACE findings implemented

Health District IT/Procurement / To be Determined Planned Funds: In FY2004, USG strengthened IT capacity in 4 health districts providing ART Activity Narrative: services: Gainini, Gihundwe; Nyagatare and Butare. In FY2005, USG will continue support to these districts and expand IT capacity in 6 additional health districts providing ART services. The support package includes procurement of IT equipment (servers, routers, radio wireless hubs and wireless cards), assistance with installation and set-up of this equipment at the district hospital, affiliated (ART) health centers and CPLS office in each district, and support for Internet connectivity and system maintenance. CDC-Rwanda will procure the IT equipment directly for the health districts. All other aspects of the Health District IT Infrastructure procurement will be managed by a local contractor to be determined through a competitive award. The contractor will: Conduct a rapid IT needs assessment in 6 selected districts; Install and configure IT equipment in 6 districts; Ensure constant connectivity in 10 districts (installing a broadband connection at 6 new district hospitals and wireless connectivity at the sites surrounding those hospitals, and maintaining connectivity at 4 existing sites); - Train district health team personnel in IT system maintenance (10 districts) Make regular and on-demand maintenance/QA visits to 10 districts. As a result of this activity, health teams in 10 districts will have the capacity to: Submit ART program data to central MOH entities electronically; Access and use the TRAC database from hospital and health center computers; Refer patients and exchange patient information between district hospitals and surrounding health centers. **Activity Category** % of Funds ☑ Infrastructure 10% Needs Assessment 10% Quality Assurance and Supportive Supervision 25% Strategic Information (M&E, IT, Reporting) ablaTraining Targets: □ Not Applicable □ Not Applicable 40 Number of individuals trained in strategic information (includes M&E, surveillance, and/or HMIS)

Total Funding for Program Area (\$):	

Current Program Context:

USG provides support and technical assistance to the National Reference Laboratory (NRL) to improve taboratory capacity at the national level for HIV/AIDS testing, care and treatment. The NRL is located in Kigali and supports district laboratory capacity building and national quality assurance (QA) programs as well as research, including HIV vaccine trials. It provides a range of HIV/AIDS laboratory services, including viral load, CD4, EIA, confirmatory HIV testing and PCR. In FY2002, USG assisted in the establishment of the national quality assurance program for HIV testing. VnNSG technical support for laboratory infrastructure in FY 2005 will focus on key reference laboratory functions, including training, quality assurance systems, national laboratory policy development and standardization of procedures, and developing in-country expenise in performing new procedures for HIV-related care and treatment. InhiThe current HIV serology quality assurance system will be adapted and strengthened to support the rapidly expanding number of PMTCT and VCT sites in Rwanda, through the development and use of dried plasma spot proficiency panels. In FY 2004, CD4 testing began for the first time in provincial laboratories outside of Kigali. USG will support implementation of the national CD4 quality assurance system. National HIV surveillance capacity will be enhanced through training and support for new procedures such as drug resistance testing and HIV incidence assays. USG will continue support to NRL and Kigali Health Institute (KHI) to strengthen pre-service and in-service training capacity for laboratorians throughout the country. Generic standard operating procedures (SOP's) for HIV-related analyses developed in FY 2004 will be implemented in sites throughout the country and reinforced by on-site adaptation and training. The above activities will be carried out in close collaboration with the USG-funded long term technical advisor placed at the NRL. Infor these technical activities, USG main laboratory partners have the following roles: Through the long-term technical advisor, Columbia assures day-to-day technical oversight for implementation of activities (QA/QC for HIV serology and CD4, drug resistance testing, incidence assays, training). This technical advisor will also support NRL and KHI in providing pre-service and in-service laboratory training. CDC laboratory expertise is tapped to provide technical assistance and general oversight focused especially on key new laboratory techniques (such as developing DPS panels for serology QA/QC, using CDC-developed incidence assays, training for drug resistance testing). CDC also will procure or supply specialized materials not readily available commercially. APHL will continue its role procuring the bulk of needed laboratory materials and equipment, including for drug resistance surveillance and early infant HIV diagnostics. MSH-RPM+ will implement the laboratory SOP activity. In Inthe addition to technical laboratory support, USG (through Columbia University) will bolister management and financial capacity through the placement of a long term laboratory management edvisor and through support for data management system improvements for tracking specimens and reporting functions. In EY2005, the NRL will gain valuable experience managing a one-year sub-agreement with Columbia University for_ the above activities. This experience, in combination with financial management support, will build the capacity of the NRL to effectively manage direct USG funding under a cooperative agreement to be developed in 2006. In 2006 and thereafter, funds to support NRL laboratory infrastructure will no longer go through Columbia University, but will go directly to the NRL vs

Table 3.3.12: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:	Columbia UTAP / Columbia University Mailman School of Public Healt	h
Planned Funds:		

Activity Narrative:

Columbia University, in partnership with CDC, will manage a series of activities to build national laboratory capacity for national roll-out of HIV/AIDS services. In FY05; Columbia will support National Reference Laboratory (NRL) and Kigali Health Institute (KHI) through:

- 1. Long- and short-term technical assistance: A long-term technical advisor will provide technical support to NRL staff to increase its capacity to provide quality HIV-related laboratory services. Along with NRL and TRAC counterparts, the Advisor will oversee the establishment of laboratories at new ART sites throughout the country and will develop quality assurance systems. Columbia will support a local lab technician to support national standards and quality assurance systems and to apply new HIV/AIDS-related laboratory technologies. Short-term advisors will be utilized for specific projects such as baseline assessments at new sites or the development of quality improvement tools.
- 2. Managerial and infrastructural support to the national laboratory network. Columbia will place a long-term management advisor at NRL to support the management team. The advisor will help develop financial, logistics and commodities management systems. Columbia will support the renovations of NRL necessary to accommodate molecular diagnosis and genotyping activities. Support will be provided for operational costs associated with the implementation of NRL's—QA/QC activities in peripheral lab sites (supervision, transportation of QA/QC panels), small repairs and preventive maintenance in the ART site laboratories, and warehouse storage, and transport laboratory equipment and reagents to sites.
- 3. Training: Columbia will provide technical, financial and logistical support to the KHI and NRL for pre-service and in-service trainings on HIV-related laboratory techniques. Training will be provided for the introduction of new opportunistic infection analysis technologies at provincial laboratories. A 6-person national training team will be selected and trained. This team will support one week in-service trainings after the inauguration of each new lab.
- 4. Data management: Columbia will support the development of a data management system at NRL for specimen tracking, analysis and reporting. Support will include a local hire data manager position, TA for software development/adaptation, computer workstations and bar-coding equipment and supplies.

Budget Code: (OHPS)

Program Area Code: 14

Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: UTAP / Tulane University

Planned Funds:

Activity Narrative:

Through the placement of an international-hire Administration and Finance Technical Advisor to TRAC's deputy director, Tulane will:

- Assist with the completion of TRAC's new administration and finance policies and procedures
- Train TRAC personnel in proposal writing, resource management and work productivity
- Develop criteria and implement review of activity plans from major donors (Emergency Plan, Global Fund and World Bank/MAP to assure inclusion of management and administration, sustainability, analytic capacity building & gender equity components
- · Monitor and report on implementation of TRAC strategic plan

In FY04 the USG provided support to develop an HIV/AIDS fellowship program to increase program management capacity among young Rwandan public health professionals. The fellowship program seeks to prepare recent Rwandan graduates to work as program managers of HIV/AIDS prevention, care and treatment programs in Rwanda. Fellowship components include training, mentoring, and on-the-job experience, through placement of fellows in two-year paid internships with local host agencies. The fellowship program, which was jointly managed by Tulane University and the National University of Butare in FY2004, will be transferred to the Ministry of Education in 2005 through a direct cooperative agreement with the Ministry of Education (see MOE under Other Policy/System Strengthening section). Program costs such as fellows' stipends, training and supervision logistics will be funded and managed by the Ministry of Education. (Note: This MOE activity is separate from the new School-based prevention and testing activity described in Abstinence and Counseling and Testing sections).

In FY2005, Tulane will provide technical assistance to the Ministry of Education for the implementation of the training components and for general operations support of the fellowship program. Specifically, Tulane will provide technical assistance for the recruitment, placement ongoing training and supervision of 20 new fellows and 7 continuing fellows. Technical assistance to the Ministry of Education will also include support for financial and program monitoring and reporting for the fellowship, and the design of program evaluation planned for FY 2006.

Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: HIV/AIDS School Based Program-MOE / Ministry of Education of Rwanda Planned Funds:

Activity Narrative:

The HIV/AIDS fellowship program, which was jointly managed by Tulane University and the National University of Rwanda (NUR) in FY2004, will be transferred to the Ministry of Education (MINEDUC) in FY2005. The program prepares recent Rwandan graduates to work as program managers supporting HIV-AIDS prevention, care and treatment interventions in Rwanda. The program combines in-country training, mentoring and on-the-job experience by placing fellows in two-year paid internships with local host agencies. This provides Rwandan institutions with increased human resource capacity while transfering critical HIV/AIDS program management skills and competencies to a new generation of young professionals in Rwanda.

MINEDUC will be responsible for all aspects of the program's management and administration, including:

- Support of the current 7-fellow cohort into October 2006
- Recruitment of a new cohort of fellows in 2005 (approximately 20)
- Identification of appropriate mentors and host institutions for new cohort
- Orientation of fellows and mentors
- -- Remuneration to fellows (stipends, insurance, living costs, other)
- Compensation for mentors
- Program monitoring, evaluation and reporting
- Job placement assistance to fellows

The expected outcomes for this intervention for FY2005 are the successful completion of the fellowship by the first cohort of fellows (culminating in their employment by HIV/AIDS institutions or organizations in Rwanda) and the introduction of a new cohort of approximately 20 fellows, as well as increased human capacity at HIV/AIDS program sites in Rwanda.

President's Emergency Plan for AIDS Relief Country Operational Plan Rwanda FY 2005

UNCLASSIFIED2/09/2004

Page 240 of 272

Activity Narrative:

Rwanda does not have an effective system to register drugs or provide basic drug quality assurance, although its drug procurement agency. CAMERWA, per national policy will be procuring all ARVs for use in Rwanda. To improve ARV availability and assure quality, the Secretary General and the Direction of Pharmacy have requested technical assistance to facilitate establishing a National Drug Authority one of the main priorities of the pharmaceutical sector. Developing and implementing a National Drug Authority usually requires several years for full implementation, and high investments of human and financial recourses.

USG has agreed with the Direction of Pharmacy (DOP) to place an expert Senior Advisor in pharmaceutical policy, who will facilitate the design and first-stage implementation of the National Drug Authority, and who will also assist in the usual activities carried out by the DOP

USG will undertake the project activities described below, in collaboration with the Direction of Pharmacy and other partners such as the WHO.

- Outline a conceptual framework describing the roles and responsibilities of a regulatory authority for pharmaceuticals, for ARVs and other pharmaceuticals in a severely resource-limited country setting. This will include;:
- 1.1. Identifying, defining, prioritizing, and establishing an appropriate sustainable mix of technically sophisticated activities to support the risk-based regulatory systems.
- 1.2. Identifying the conditions and resources necessary to justify, develop, and sustain a system capable of providing a comprehensive service Rwanda.
- Assist the NDA in reviewing experience from other resource-limited countries to prioritize activities defined in scope, financial, technical, and human resources.
 USG will also assist the NDA to explore the need, justification, and potential for employing human and technical resources from outside of the NDA.
- 3. On the basis of activity #1, make recommendations on an appropriate scope of activities and developmental priorities for the NDA in Rwanda, including scope of product coverage (i.e., pharmaceuticals, food, medical devices, and/or cosmetics), and identify human, technical, and financial resources required.
- 4. Define role of National Drug Authority in the MOH, including technical, human and financial resources, existing organizational structure, management, and information systems, legal and regulatory framework.
- 5. Develop a comprehensive, prioritized, fully costed, multi-year, strategic plan to:
- 5.1 Establish and implement an appropriate drug registration activity for protecting public health.
- 5.2 Establish and implement a nationwide quality system program for all regulated areas including, as appropriate, testing, inspection, registration, and enforcement activities.
- 5.3 Establish and implement policies and procedures for regulation of imported products as well as those manufactured domestically to help ensure availability of quality products and implementation of appropriate quality systems.
- 6. Based on acceptance of the recommendations resulting from activity #3 and the - strategic plan resulting from activity #5 by the Ministry of Health, develop:
- 6.1. A draft organizational structure and job descriptions for the NDA.
- 6.2. Draft policies and operational processes for a national system for drug registration and product quality assurance.
- 6.3. Draft legislation and regulations for instituting a national system of drug registration and product quality assurance.

Note: This activity covers development of the strategic plan (activity #5) and the specific products outlined in activity #6. Full implementation of the strategic plan would require additional financial support.

Activity Narrative:

This activity provides technical assistance to the National Reference Laboratory (NRL) to support development and implementation of a National Laboratory Policy, critical to scaling up ART.

The laboratory sector in Rwanda lacks an appropriate policy and legal framework to support the system. Although some guidelines have been developed to support ART, a National Laboratory Policy has not been yet developed in the country. At the request of the MOH, USAID, and CDC, MSH/RPM Plus has taken the lead in facilitating the development of a National Laboratory Policy (NLP). This process will be finalized during COP05. In addition, USG will facilitate the dissemination of the document to facilitate its implementation.

The strategy for the development of the NLP consists of establishing a technical group in country, supported by MSH experts that will contribute to revision of drafts until obtaining the final approval. Developing this document requires the agreement and participation of a number of experts in different areas of health, laboratory and policy, to ensure a document that will support development of the sector, and is well integrated with other related health policies and strategies under implementation.

MSH/RPM Plus, in coordination with NRL, will facilitate the participation of local experts and the conduct of meetings and workshops required for the development of the policy.

After the document is approved, RPM Plus will work with NRL to develop and implement a dissemination strategy. This includes all processes related to editing, translation, and publication, as well as the official launch of the document by the MOH, and its presentation to target audiences.

Human resources: The lead of this intervention will be one staff member in the office in Kigali with expertise in laboratory. Additional senior staff in Kigali, Washington, Nairobi and any other MSH worldwide expert required will also be available.

Program Area: Other/policy analysis and system strengthening Budget Code: (OHPS) Program Area Code: 14 Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: USAID Procurement/ HIV/AIDS Performance Based Financing / To Be Determined Planned Funds: **Activity Narrative:** To improve efficiency, productivity and quality of HIV/AIDS services delivery and to continue financing of service delivery of HIV/AIDS under local management, USG, in collaboration with GOR, will produce health financing technical assistance to implement performance-based financing of HIV/AIDS services. The awardee will provide assistance to the Department of Health Services (DSS) and to regional health authorities to implement performance-based financing. Within 2005, a pilot to implement performance-based financing OF HIV/AIDS services (C&T, PMTCT, Palliative/basic care) in several health districts will be started. The medium term goal is to use this contracting mechanism to transfer facilities back to GOR management once USG partners have successfully invested and implemented HIV/AIDS services. After USG partners have worked at facilities to implement C&T, PMTCT, palliative/basic care, and at later dates possibly ART services, these facilities' management will revert to local management, under national/regional coordination. This is anticipated to be a multiyear procurement with progressively greater reallocated financing each year flowing through it to Rwandan health facilities/providers for HIV/AIDS service delivery performance. In 2005, USG will pilot this performance-based financing of HIV/AIDS services when USG TA and other assistance is withdrawn from these sites offering C&T, PMTCT. and palliative/basic care. This is a component of USG strategy for national scale-up

standards for HIV/AIDS service delivery.

This program will also build on the extensive network of community-based financing mechanisms already developed and in place in 70% of Rwandan communities. It will determine appropriate premiums or other financing to minimize financial barriers to basic care for PLWHAs. The technical advisor will assist in establishing costs of HIV/AIDS services.

of HIV/AIDS services. To assure performance, the DSS will develop financial and clinical quality audit capacity...Information system support necessary to monitor financing and productivity will be developed. Health Financing TA will develop costing formulas for each activity/indicator to be reimbursed. Contracting mechanisms between USG, central and/or regional governments and HIV/AIDS health providers will be developed to allow providers to have autonomy to manage their budget subject to maximize efficiency while meeting quality performance

Activity Narrative:

The purpose of USG activities for FY05 is to strengthen public health leadership and district health management capacity in Rwanda to address the critical problems of HIVIAIDS. In collaboration with the School of Public Health (National University of Rwanda), USG will continue to offer in-service training targeted to district managers, and the graduate level HIVIAIDS certificate program. This will build Rwandan capacity in strategic information for HIV programming, while, at the same time, the training activities will build the applied research/analysis capacity of key institutions engaged in HIVIAIDS work, including the SPH, allied health sciences faculty, and key faculty within the Ministry of Education. Emergency Plan funds are leveraged with other funds from USAID.

The continuation of the Executive MPH Program targets the GOR's District Health Officers, hospital directors and managers, and NGO/PVO program managers to improve Rwanda's human resource capacity for planning, executing, monitoring and evaluating HIV/AIDS programs at the district level. The MPH program immediately and directly benefits Emergency Plan activities, as students in this program are the key members of the district and provincial liculth teams. Members of these teams are actively involved in the rollout of HIV/AIDS initiatives funded through the Emergency Plan and other sources. Their responsibilities are broad in scope and include the expansion, management, and supervision of the PMTCT activities and VCT sites, including personnel and commodities management.

Additionally, district health feam (DHT) members must monitor and evaluate through data analysis the PMTCT and VCT activities. DHTs are also responsible for the planning and implementation of community-based financing to pay for ARV (anti-retroviral drug) costs, monitoring the adherence rates of ARV medications, and evaluating overall ART (anti-retroviral therapy) program performance. The skills and competencies necessary to carry out these duties and more are provided by the School of Public Health's executive MPH program. All of the field exercises in the MPH program will be adapted to incorporate the actual strategies and issues related to the national HiV/AIDS program rollout. Resources are required for the second year completion of the current program (10 new students started under Track 1.5 funding, and were funded for one year only of the two year program). These students will complete all course work in 2006.

The certificate training program will target health sciences and related educators at the higher education level. The certificate course modules will emphasize building strategic information capacity related to HIV/AIDS prevention, care and treatment programming and secondly, it will emphasize training of trainers techniques to enable educators to more effectively disseminate their skills/competencies to the large body of health and education personnel in Rwanda. The certificate course focuses on the provision of enhanced evaluation, applied research and analysis skills as it relates to HIV/AIDS prevention, treatment and care programs. A course on pedagogic techniques and appropriate use of computer and technology assisted educational methods will enable professionals in KHI, NUR, KIST and KIE to better train front line mid-level managers of HIV prevention, care and treatment programs. Participants in this program will include 30 students from selected departments within the NUR, the MOE, allied health sciences and NGO technical community. The program will be in executive format with two one-week intensive modules at the beginning and end of the program combined with evening sessions and weekend practical work between the two intensive sessions. The entire certificate program will be completed within a four month period. A cohort of 30 students will be selected from faculty among the various institutions to encourage collaboration and team building across the higher education institutions in efforts to better address the problem of HIV/AIDS. Graduate level credit will be awarded on the basis of merit to the top 2/3rds of the class.

Table 5: PLANNED DATA COLLECTION IN FYO	e 5: PLANNED DATA COLLECTION IN FY05						
Please answer each of the questions in this table in relation to data collection ac	ctivities planned in your country in fiscal	/ year 2005,					
			•				
Is an AIDS indicator Survey (AIS) planned for FY05?		□ Yes	☑ No				
u yes, wu niv tesung be maudeu? When will preliminary data be available?	December 31, 2005	∐ Yes	EI NO				
a di kanangangan ang kanangan kanangan ang kanangan ang kanangan ang kanangan ang kanangan ang kanangan ang ka	annagarakat anan basar dipertakan dipertakan	BANGAR TOTAL		40609			
 Is a Demographic and Health Survey (DHS) planned to 	#F1057.#	Ø ≓ Yes ⊑	□ Ño:				
If yes, will HIV testing be included?	Color Mark Commission Commission (1 to 1 11 to	Ø Yes	□ No				
When will preliminary data be available?	October 01, 2005	n ni ni milina da kalamanan da ya ya ya da da i	- some in the control of the second				
3. Is a Health Facility Survey planned for FY05?		□ Yes	⊠ No	: 15 m			
Mahamata - milimahan dara ha gugilebiha?							
When will preliminary data be available?		A SAME AND A	erellinging lateral	14.35			
4. Is an ANC Surveillance Study planned for FY05?		✓ ✓ Yes	□ No	1634 1634			
If yes, approximately how many service delivery sites will it cover?	24.00	PROPERTIES PROFESSION	A CONTRACTOR SECTION SECTION	. Fan;			
When will preliminary data be available?	November 30, 2004		•				
5. Other significant data collection activity.							
Name: SAVVY and HMIS assmnt- Measure Evaluation							
Brief description of the data collection activity:							
MEASURE Evaluation will conduct a Sample Vital Registration wit is a methodology being adopted by various low-resource countries							
attributable to AIDS. Ideally such data would come from a healthy							
absence of strong vital registration, but with an eye to building cap	pacity for such a system, SAVVY	Υ .					
quickly and inexpensively allows monitoring of this important impa		•					
to carry out in 2005 a comparative assessment of the national HM strengthening and streamlining the various systems that collect roll			•				
existing MEASURE tool, being used in other countries is proposed	d for Rwanda.InThe PLACE study						
programmed and to be completed in 2004; will generate rich data			a la de la companya d				
monitoring prevention program coverage. The results of this study coverage of well-targeted prevention efforts. \nExpected results:\n							
assessment (including consensus workshop) conducted nPLACE							
Preliminary data available:							
·
