#### National Response

With 15.6% of the adult population infected with HIV, Zambia faces its most critical health, development and humanitarian crisis to date. There remains an urgent need for an integrated response from all sectors of the Government of the Republic of Zambia (GRZ), faith-based organizations (FBOs), nongovernmental organizations (NGOs), the private sector, and the donor community. In close partnership with the GRZ, Zambian Defense Force (ZDF), local organizations, and donors, the Emergency Plan expands and strengthens the national response to HIV/AIDS.

The NAC (National HIV/AIDS/STI/TB Council) has been given the onerous task of coordinating the response to HIV/AIDS throughout Zambia. The NAC is a Zambian government institution that provides national leadership to coordinate and support the development, monitoring and evaluation of Zambia's integrated response to prevent and combat HIV/AIDS, sexually transmitted infections (STIs), and tuberculosis (TB).

In support of the GRZ's National HIV/AIDS/STI/TB Intervention Strategy Plan 2002-2005 (Strategic Plan), there are currently 29 donors contributing to reducing the impact of the HIV/AIDS epidemic. The United — Kingdom (UK) and US are the largest hilateral donors in the fight against AIDS. At present, the USG is the sole donor to the ZDF. Donors are coordinated at the highest level through an HIV/AIDS Expanded Theme Group led by the Minister of Health and UNAIDS, through Technical Working Groups implemented by NAC, and numerous committees and meetings.

The NAC receives technical assistance (TA) through the Global Fund to fight AIDS, TB and Malaria (GFATM), the UK Department for International Development (DFID), the United Nations Development Program (UNDP), the African Development Bank, the Norwegian Agency for Development Cooperation (NORAD), and the USG. The Global Fund supports a wide range of prevention, treatment, and care activities through the public health sector, NGOs, FBOs and workplace programs. UNDP also supports a multisectoral response strengthening HIV/AIDS task forces at all levels. The World Bank's \$42M six-year Zambia National Response to AIDS (ZANARA) Project supports the Community Response to AIDS (CRAIDS) small-grant fund and NAC workplace programs.

The United Nations Children's Fund (UNICEF) supports ART for HIV+ children and orphans and vulnerable children (OVCs). UNICEF also supports home-based care and provides TA for procurement services at the Ministry of Health (MOH) and assistance procuring drugs and supplies. UNICEF's Prevention of Mother to Child HIV Transmission (PMTCT) activities are also supported by DFID.

The Japanese International Cooperation Agency (JICA) contributes significantly by providing STI drug and training for the USG Corridors of Hope cross-border program. Other bilateral donors include the Netherlands, Canada, Sweden, Denmark, Ireland, and the European Union. They support the public health system and health services delivery, and some are planning or implementing HIV/AIDS activities in addition to their pooled funding support. They address a number of critical issues such as:

- · Expanding access to safer blood
- Improving STI management and treatment;
- Supporting behavior change communication:
- · Distributing condoms:
- · Providing care and support for people living with HIV/AIDS;
- Strengthening home based and hospice care systems;
- Supporting OVCs;
- · Supporting drug procurement and logistics systems
- · Supporting health sector systems strengthening;
- Expanding directly observed therapy (DOTS) to improve TB care; and,
- · Improving treatment of opportunistic infections;

Also on the frontlines in the fight are hundreds of FBOs and community-based organizations (CBOs) that are committed to implementing prevention activities to mitigate the impact of the epidemic and improve the lives of people infected with or affected by HIV/AIDS.

# National HIV/AIDS Action Framework

The Zambia National HIV/AIDS/STI/TB Intervention Strategic Plan 2002-2005 (Strategic Plan) vision is a nation free of HIV/AIDS. In order to achieve this vision, the GRZ engages government, civil society, unions and associations, NGOs, FBOs, community-based organizations (CBOs); persons living with HIV/AIDS (PLWHAS), the donor community, private sector, and the media in this national effort.

Its overarching goals are:

·1.1.1 ·

· To prevent/reduce HIV/AIDS/STI/TB transmission; and.

· To mitigate the socioeconomic impact of HIV/AIDS/STI/TB.

The Strategic Plan involves all levels of society, from the community level up, including the private sector. The wide diversity of actors, processes, interests, and levels of HIV/AIDS interventions are recognized in the Strategic Plan as essential to success. The Strategic Plan reinforces the need for strong political will, leadership, coordination, development and sustenance of partnerships in order to fight the battle against HIV/AIDS.

The Emergency Plan activities are closely aligned with the Strategic Plan, which prioritizes all Emergency Plan program areas. In line with the Zambia Strategic Plan, the Emergency Plan supports the following key strategies:

- Rapidly strengthening and scaling up existing HIV/AIDS treatment, prevention and care services;

- Building capacity for long-term sustainability of HIV/AIDS treatment, prevention and care services; and

- Advancing policy initiatives and leadership that support HIV/AIDS treatment, prevention and care services.

#### 1.1.2 National HIV/AIDS Coordinating Authority

The national coordinating body, the National HIV/AIDS/STI/TB Council (NAC), was established by Parliament in December 2002 to provide national leadership in coordinating and supporting planning, monitoring, and evaluation of the nation's response to prevent and combat HIV, STIs and TB. The Council also coordinates resource mobilization. The Council is comprised of broad representation from numerous government ministries and civil society. A Cabinet Committee of Ministers, reporting to the Head of State, provides policy direction and guidance to the Council and a Secretariat for NAC implements NAC decisions. In order to achieve the goals in the Strategic Plan, the NAC has established standing technical committees, coordinated technical guidelines for the response to HIV/AIDS, and continues to focus on prevention, treatment, and care policies. The Ministry of Health has responsibility for guiding and implementing health services for HIV/AIDS. The Ministry of Youth, Sport and Child Development is the secretariat for work on OVCs.

The primary responsibilities of the NAC include:

Coordinating and supporting the development of HIV/AIDS programs;

Workloring and evaluating HiV/AiDS programs;

Advising the Government of the Republic of Zambia (GRZ) on appropriate prevention, care and supportstrategies; and,

Facilitating the reduction of personal, social, and economic impacts of HIV/AIDS/STI and TB.

The NAC itself is relatively new and, though staffed by highly motivated and capable individuals, requires support and strengthening through technical assistance and training as well as assistance in the development of systems for monitoring and tracking program results and impact. The USG has already begun assisting Zambia and the NAC to develop the necessary capacity to drastically scale-up ART services.

One way in which the USG and other donors have strengthened HIV/AIDS program coordination is through extensive technical support for national policies and guidelines for HIV/AIDS interventions and approaches. USG partners have helped to develop national policies, plans and guidelines, including: the National AIDS Policy, the NAC Strategic Plan; scale up plans for ART and PMTCT; national training packages for ART, PMTCT and OI; a revised national formulary that includes ARVs, , and National Clinical Protocols for HIV/AIDS Care & Support – Draft. Support for policy development through the NAC and delivery of services through the Ministry of Health will be a continued USG priority and effort. The USG will continue to be an active participant in the Country Coordinating Mechanism of the Global Fund to Fight AIDS, TB and Malaria and in NAC and MOH Technical Working Groups.

In addition to assisting the development of national policies, the USG will strengthen the NAC through its Technical Support and Capacity Building Project. The USG will also scale up by building on the demonstrated effective model in the Southern Province for strengthening District AIDS Task Forces to design, implement, and advocate for programs. These task forces will bring together a wide range of stakeholders, including FBOs, traditional leaders, parliamentary representatives, women's groups, NGOs, government, the business community, and the police and armed forces. This effort will ensure the efficient implementation of HIV/AIDS programs and effective use of resources nationwide.

#### 1.1.3 National HIV/AIDS M&E System

The National HIV/AIDS/STI/TB Council (NAC) has drafted a national monitoring and evaluation plan. In the spirit of the "Three Ones," NAC's national monitoring and evaluation (M&E) plan is based on the National HIV/AIDS/STI/TB Intervention Strategic Plan 2002-2005. The NAC M&E plan specifies the indicators through which NAC will monitor the national multi-sectoral response to HIV needs.

It is envisioned that the District AIDS Task Forces (DATF) will collect and report on the HIV related activities in their districts to NAC. The DATFs are part of a longer standing District Development Coordinating Committees (DDCC). The DDCCs' represent local government, civil society, women, youth and special interest groups. They provide valuable input into the District planning processes. They are the government's real link to the communities they serve.

NAC brought district, provincial, and national government and partners together in August 2004 to refine the national M&E framework. The nearly 300 participants suggested that information would flow from the communities to the DATEs to the Provincial AIDS Task Forces to NAC. NAC will analyze and report to the Cabinet of the President quarterly. The group recommended a regular feedback system be developed which would include regular site visits by NAC to each district and province.

The NAC M&E Technical Working Group is working to use the recommendations from the August meeting to revise the indicators and to develop a working implementation plan for the M&E framework. Specific modalities of reporting are being reviewed.

For health sector specific data, NAC requires the Ministry of Health (MOH) to submit data. MOH will use their already established Health Management Information System (HMIS) to capture and present their data. The USG is assisting MOH to adapt the HMIS to incorporate ART, PMTCT, and counseling and testing data management capabilities.

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

12/13/2004

Page 9 of 306

In implementing the Emergency Plan, the USG will take full advantage of the GRZ's existing Health Systems network model that functions at national, provincial, district, sub-district and community levels. The public health system is organized around several "3rd level" referral hospitals, second level hospitals (generally one per province but a number of provinces have more), first level district hospitals (generally one per district), health centers, and community-level structures such as Neighborhood Health Committees. These institutions are supplemented by private facilities (which are often faith-based), workplace programs, and private clinics. The GRZ also contracts with the Churches Health Association of Zambia to have many of their member hospitals and clinics serve as government service facilities. Laboratory and diagnostic services, infrastructure and logistics, quality assurance, and strategic information are all also key components of the network system.

This system allows the GRZ, USG, and other key donors to expand ART and care for HIV infected and affected persons as quickly as possible. However, challenges to strengthening the network include the need to strengthen both physical (transport, communication, etc.) and operational referral systems between health facilities, community programs, and private enterprises as well as emong other sector services in order to establish a well-integrated continuum of care. Adequate staffing at each level with appropriate training and experience is also necessary.

The USG team will ensure strong linkages between PMTCT, CT, ART, TB, STI, and palliative care services within and between medical facilities, hospices and in the home as well as with services/programs. For example, to increase treatment adherence, patients (both adults and children) will be linked to community based palliative care programs where support for ARV adherence and basic care services will be provided. At the community level, links to palliative care and psychosocial support will be established for PLWHAs and orphans and vulnerable children (OVCs). To enable the rapid expansion of comprehensive HIV/AIDS prevention, treatment, and care services nationwide, the USG will continue to support the further integration and strengthening of existing health services and systems.

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

12/13/2004

Page 10 of 306

The GRZ has embarked on a plan to drastically and rapidly scale-up availability of ART, CT and PMTCT services throughout the country. However, the implementation of this comprehensive package of diagnosis, treatment and care requires already overworked and understaffed facilities to devote scarce time and resources to meet these needs. Adding to this shortfall of human resources is the emigration of trained and skilled health care workers, the "brain drain." The burden of HIV/AIDS on the health system, including the military health system, has been enormous. There are currently only 8 physicians in the Zambian Defense Force, serving a population of close to 30,000. Both in-patient and outpatient services have been strained. More than 65% of hospital admissions are due to HIV/AIDS related illnesses. Therefore, there is an urgent need to increase human resources, especially skilled health workers such as physicians, nurses, pharmacists and managers to address HIV/AIDS in Zambia.

Resolving the human resource crisis in Zambia will require complex action at policy, planning, regulatory, legal, management, and training levels. It will require clarifying disjointed human resource (HR) management functions currently spread across the Civil Service, Ministry of Finance, and the Human Resources Division of the Ministry of Health (MOH). Close collaboration will be needed with stakeholders such as the Medical Council, the General Nursing Council and the health worker training institutions. Finally, it will be necessary to address the serious morale issues and the increasing burden on health staff whose performance is affected by HIV/AIDS or the threat of HIV infection.

The USG will support a wide variety of efforts to expand human resource capacity for HIV/AIDS. At the national level, the USG will work closely with the MOH to strengthen planning, forecasting, training and management related to human resource needs. Discussion of expanding scopes of practice for health workers, use of lay counselors and other community health workers, and other approaches to expanding the pool of people eligible to provide HIV/AIDS care and treatment will be critical. Analysis of the pre-service health training institutions to help them better meet the needs of the health sector in terms of quantity and quality of their graduates will be undertaken. Assistance to develop a coordinated in-service training system for already employed health workers—one which tracks their training and looks at ways to maximize skill building while minimizing disruption to service delivery facilities, will also be provided. Throughout the activities to be implemented through the FY05 Country Operational Plan are short-term training programs to build the skills and knowledge of thousands of Zambian health workers, managers, community leaders and others in preventing, treating and providing care for HIV/AIDS.

In order to directly address the number of skilled health workers and managers available, the USG will also contribute to a retention scheme for physicians in rural areas—the only one its kind in the public sector—to provide additional staff to Provincial Health Offices, and make key technical assistance available to the MOH, National AIDS Council, Ministry of Sport/Youth/Child Development and other key institutions. The Emergency Plan will also focus technical assistance and training for an expanded network of new partners, including FBOs, CBOs, and private and public sector groups, to close the human capacity gap and lead to a sustainable network of treatment, prevention, and care providers. The mutually beneficial twinning of Zambian health institutions with U.S. and regional health institutions and universities and harnessing the power of volunteers are other key strategies in building human capacity.

The Emergency Plan in Zambia has given the USG an unprecedented opportunity to more actively involve the GRZ, Zambian Defense Force (ZDF), the private sector, and donors in focused planning on HIV/AIDS prevention, treatment, and care activities. This coordination builds upon the existing strong partnerships among donors and government around addressing technical interventions, such as PMTCT, VCT, and integrated approaches to HIV/AIDS reduction.

In line with the UNAIDS "Three Ones" initiative, it is important that the USG work closely with the GRZ and donors on developing a harmonized HIV/AIDS action framework, building up the NAC (the coordinating mechanism), and continuing to work on an agreed national monitoring and evaluation system. Over the next year, the consultative process surrounding the Emergency Plan will be streamlined so that key GRZ and donor representatives are knowledgeable about the Emergency Plan, its directives, and its potential in Zambia. The USG aspires to ensure inclusion of key persons in the GRZ, particularly the MOH, NAC, and the ZDF, key donors, and other partners. This way, lines of communication will be simplified and work can be maximized over time.

The Ministry of Health (MOH) provides health sector oversight for policy, planning, legislation, resource mobilization, external relations, and monitoring and evaluation. It is also responsible for all HIV/AIDS health service delivery. The National Orphans and Vulnerable Children (OVC) Steering Committee provides leadership, policy guidance, and resource mobilization on OVC issues. The OVC Steering Committee includes government ministries, child welfare networks, NGOs, and FBOs. The United Nations Children's Fund (UNICEF) represents the donors on the Steering Committee, which the USG supports through a grant to UNICEF. The OVC Secretariat is the Ministry of Sport, Youth and Child Development.

The USG maintains a close working relationship with GRZ and other agency implementers. Decisions are made by a consensus-building process. The USG will continue to work within the GRZ's management style of building consensus.

The Country Coordinating Mechanism (CCM) for the Global Fund to Fight AIDS, Tuberculosis and Malaria (Global Fund) directs planning and coordination of national Global Fund activities. It has a diverse membership including the NAC, MOH, National Malaria Control Program, GRZ ministries, nongovernmental organizations (NGOs), FBOs, CBOs, youth groups, PLWHA advocacy groups, the private sector, and multilateral and bilateral donors. Donors are currently represented on the CCM by the USG and the Netherlands. USG provides technical assistance to the CCM. Under Round One, the Global Fund provided US\$ 42 million over 2 yrs, including approximately \$2 million for anti-retroviral drugs (ARVs) and \$1.1 million, for STI drugs and other supplies in the first year. A Round Four proposal is in negotiation. The Global Fund works through 4 principal recipients: MOH (for public health sector); the Ministry of Finance & National Planning (for other government ministries); the Churches Health Association of Zambia (CHAZ; for faith-based groups); and the Zambia National AIDS Network (ZNAN; for NGOs). The Global Fund supports a wide range of prevention, treatment, and care activities.

The World Bank's \$42M six-year Zambia National Response to AIDS (ZANARA) Project supports the Community Response to AIDS (CRAIDS) small-grant fund and NAC workplace programs for government ministries.

12/13/2004

Page 13 of 306

#### 1.4.1 Public-Private Partnerships

The private sector in Zambia, including private health care providers, has begun to play an active role in the fight against HIV/AIDS. The USG supports two of the largest companies in the country, Dunavant Cotton and Konkola Copper Mines (KCM); in establishing workplace HIV/AIDS programs. Through this initiative alone, over 135,000 persons henefit from HIV/AIDS prevention that focus on Scing Fuithful and other related activities. Two HIV/AIDS workplace Global Develop Alliances (GDA) will be formed in FY05 that will reach nearly 300,000 employees in 6 provinces. These GDAs are expected to leverage over \$1M annually for HIV/AIDS prevention, care and treatment activities from the two consortia comprised of Agribusiness and Extraction/Mining Business communities. By continuing to expand such partnerships in the private sector, the USG will be able to target difficult to reach sub-populations, such as rural and mobile workers.

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

12/13/2004

Page 14 of 306

#### 1.4.2 Local Partner Capacity for Health Care Delivery

Comprehensive trainings on prevention, treatment and care continue to be conducted nationwide, boosting the capacity of local staff and organizations. An illustration is that through the Emergency Plan, the Zambian Defense Force is strengthening their health delivery system in order to provide improved HfV/AIDS prevention and care services for the military and surrounding civilian populations. Hundreds of FBOs (such as Catholic Relief Services and the Churches Health Association of Zambia) and NGOs (such as Family Health International and the Zambia National AIDS Network) are increasingly committed to implementing Emergency Plan prevention activities, mitigating the impact of the epidemic, and improving the lives of people infected with or affected by HIV/AIDS.

The USG plans to provide sub-grants, technical support, skills based training, mentoring, and capacity building in the areas of financial and program management to hundreds of local partners in order to strengthen the sustainability of local institutions' capacity to implement effective and efficient HIV/AIDS prevention, treatment, and care programs. The USG will also continue to build the capacity of the public sector institutions, including the Ministry of Health and NAC, to do the same.

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

12/13/2004

Page 15 of 306

Gender continues to play a negative role in prevention, treatment, and care for HIV/AIDS. Risky cultural and sexual practices, beliefs, and norms that are fueled by gender inequality promote the spread of the HIV/AIDS virus. Such practices include sexual cleansing, which requires a widow or widower to have intercourse with his/her deceased spouse's siblings. Women in long-term relationships are often prevented from demanding condom usage or denying dry sex due to social norms.

In the Emergency Plan, the role of gender has heavily influenced the USG strategic approaches. Overall strategies and program activities address cultural norms and behaviors that place young women and girls in risky situations, and teach them how to protect themselves. Incorporating and increasing male responsibility and participation in relationships have been integrated into the National HIV/AIDS/STVTB Strategic Plan at all levels of society. Reduction in cross-generational sexual relations and child sexual abuse are outcomes that the Emergency Plan hopes to achieve. Other strategies addressing the role of gender include:

- · ABC education.\_\_\_\_
- · Life skills and livelihood training
- · Testing for discordant couples accompanied by couples counseling
- · Parental involvement
- · Male role models
- Ensuring post-exposure prophylaxis for rape
- · BCC campaigns targeting high risk males

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

12/13/2004

Page 16 of 306

#### Stigma and Discrimination

Stigma remains a silent but powerful barrier to fighting the HIV/AIDS epidemic in Zambia. The continuing stigma of HIV/AIDS acts as a serious barrier to seeking prevention, treatment and care services. Reluctance to break the wall of silence mutes prevention messages. Stigma and ignorance also reduce community support for people living with HIV/AIDS (PLWHA) and their affected families.

A number of traditional, political, religious, uniformed service, entertainment, and civil society leaders are working to break the wall of silence around HIV/AIDS to reduce stigma and change Zambian culture. Their number continues to increase each day. However, many influential Zambians are missing from the fight against HIV/AIDS. In some cases, ignorance may lie behind their failure to enlist; in other cases, conformity and fear of stigma may be responsible. Other potential Zambian leaders are less effective than they could be because they represent groups generally held in low esteem by Zambian society, such as women, youth, or PLWHA.

The Emergency Plan promotes the growing national and community level leadership that focuses on stigma reduction to increase access to HIV/AIDS prevention, CT, treatment, and care services. In addition, stigma reduction efforts are fully integrated in all USG/Zambia HIV/AIDS programs and services.

In FY05 and over the next five years, Emergency Plan initiatives will bring the urgency of the HIV crisis to the forefront through converted efforts to address stigma and discrimination. Zambians need to fully acknowledge the emergency HIV/AIDS represents for their nation, and leaders at all levels must increase their advocacy on HIV/AIDS prevention, treatment, and care. The Emergency Plan will continue to work with all leaders, including national leaders. National leaders need to elevate the importance of HIV/AIDS in their rhetoric and put their words into action by, for example, incorporating information on HIV/AIDS and the importance of abstinence into basic school curricula. Traditional leaders and healers need to eradicate harmful beliefs and practices among their followers. Faith-based leaders must create a climate in which discrimination and stigma are not tolerated. Community leaders must take responsibility for mobilizing resources to care for their members affected by HIV/AIDS. Leaders at all levels must empower the powerless, such as PLWHA, to take advantage of their voices in the battle against the epidemic.

**Current Program Context:** 

The Zambian Government through the Ministry of Health (MOH) began implementing the PMTCT program in 1999 as part of the UNICEF/UNAIDS pilot program to minimize the transmission of HIV from mother to children using a minimum package of care in resource-constrained countries. Six sites across the country where selected as pilots. After two years of program implementation, the MOH; in collaboration with donors and other stakeholders. developed a National PMTCT Strategic Framework. The USG was an early partner in PMTCT, supporting the pilot. program and providing technical assistance to the MOH in the development of national protocols, quidelines and training curricula for scaling up PMTCT. The goal of the Strategic Framework is to ensure that all districts in Zambia are implementing the package of care for PMTCT by December 2005. In partnership with the Zambian Government, the USG has been a key supporter of the implementation of the PMTCT expansion plan. Directly, the USG currently supports more than 80 PMTCT sites in 6 provinces of Zambia, out of a total of 92 sites in all 9 provinces. It is estimated that over 70,000 women are receiving PMTCT services in these sites and about 12,000 women and infants have received a complete course of PMTCT antiretroviral prophylaxis. As outlined by the national PMTCT protocol, the USG implementing partners are currently implementing a holistic and comprehensive approach that integrates PMTCT and CT into routine maternal and child health services. This involves supporting the training of the clinicians in the provision of PMTCT services, implementing community awareness programs targeted at communities and implementing the PMTCT package at health centre level through the strengthening of maternal and child health services, testing women and their spouses for HIV, administering antiretroviral drugs for HIV+ pregnant women and instituting a follow up program for women who participate in the program. The USG is currently building capacity at district, provincial and national levels on management of all components of the PMTCT program. As part of the partnership, USG also provides technical assistance to MOH and NAC. As a result of this assistance, the following detailed protocols have been developed; a)Internationally approved PMTCT training curriculum; b) PMTCT minimum package of care protocols and guidelines; c) PMTCT communication\_ guidelines; and d) Monitoring database that integrates PMTCT and CT. The above documents are crucial at the national level for the standardization of services and the successful implementation of the program. In addition to USG support, the PMTCT national program also receives assistance from the Global Fund which is supporting refurbishing clinic facilities at the health center level and the planned mid-term evaluation of PMTCT services in the country. UNICEF has also continued to play a pivotal role in the implementation of the program through the provision of technical support, funding of communication activities and procuring PMTCT supplies. Other UN organizations, mainly WHO, provide technical assistance to the program. The national program is also being supported by Ireland Aid, the World Food Program, Médecins Sans Frontières (MSF) and JICA.

Program Area Code: 01

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: DOD / JHPIEGO Planned Funds:

**Activity Narrative:** 

This activity is partially being funded with deferred funding.

In 2004, the Zambian Defense Force had no PMTCT programs in its 69 facilities. The goal of this activity is to implement a comprehensive PMTCT program at four military hospitals. The award includes multiple activities to address PMTCT for military and peacekeeping personnel, as well as their families. A focus of this award is to create linkages between PMTCT services and home-based care, post-test clubs, peer support groups, mother's support groups, and groups of people living with HIV/AIDS. There will also be a focus on strengthening male involvement programs.

The training component will focus on building staff capacity to implement ART, develop PMTCT policy, and enhance quality assurance and supportive supervision. Providers will be trained in the clinical delivery of PMTCT. In addition, peer counselors will be trained to support seropositive mothers post-natally.

Commodity procurement will include the purchase of PMTCT and antiretroviral drugs. Local organizations will build their capacity with training focused on: manpower and planning, procurement, policy development, and program execution. Performance improvement systems will also be established. Finally, strategic information will include gathering information on numbers of clients treated, infections averted, and overall implementation.

Through all of these activities, these four hospitals will be able to provide services for 400 new clients. The goal of this activity is to implement a comprehensive PMTCT program at four military hospitals. Women testing HIV positive requiring long term ART would be referred to the Maina Soko Military Hospital or a Ministry of Health clinic providing ARTs in their local community. The Zambian Defense Force is not receiving ARTs from the USG other than PMTCT initial ARTS.

| Activity Category                          | % of Funds |
|--|------------|
| ☑ Commodity Procurement                    | 25%        |
| ☑ Local Organization Capacity Development  | 50%        |
| Strategic Information (M&E, IT, Reporting) | 15%        |
| ☑ Training                                 | 10%        |

#### Targets:

|   |    | ☐ Not Applicable |
|---|----|------------------|
| Number of health workers newly trained or retrained in the provision of PMTCT services                    | 13 | ☐ Not Applicable |
| Number of pregnant women provided with a complete course of antigetroviral prophylaxis in a PMTCT setting | 0  | Ø Not Applicable |
| Number of pregnant women provided with PMTCT services, including counseling and testing                   | 67 | ☐ Not Applicable |
| Number of service outlets providing the minimum package of PMTCT services                                 | 1  | ☐ Not Applicable |

### Target Populations:

- ☑ HIV+ pregnant women
- ☑ Infants
- Military
- ☑ Police
- ☑ Peacekeeping personnel
- Pregnant women

### **Key Legislative Issues:**

☑ Addressing male norms and behaviors

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

CDC / Boston University

Planned Funds:

**Activity Narrative:** 

These activities will result in 1) increased access to quality PMTCT services 2) quality PMTCT services integrated into routine maternal and child health services and 3) increased use of complete course of ARV prophylaxis by HIV+ women.

Boston University, through its sub-partner and local NGO, the Zambia Exclusive Breastfeeding Services (ZEBS), will institute PMTCT services in 8-10 clinics of 2 new districts in Southern Province (Mazabuka and Monze districts). HIV-1 prevalence appears very high in these 2 districts. ZEBS, in partnership with GRZ and JHPIEGO, will train health workers in these clinics on all aspects of PMTCT services and integrate these services into routine maternal and child health services. Health workers will be trained in counseling, the minimum package of care of PMTCT, logistics, data management and quality assurance as new and on going activities in these districts. ZEBS will support districts to develop networks and referral systems for pregnant women to access other services offered at health centers and in the communities. Key to the creation of these networks will be linking HIV+ pregnant women to ART services. ZEBS will also provide counseling on appropriate feeding options of infants born to HIV+ women and those of unknown status.

As part of the program, ZEBS will raise community awareness for the PMTCT program in Southern Province and reduce HIV-related stigma and discrimination. The communities, especially men, will be mobilized and encouraged to participate in order for the program to be effective.

Since a high proportion of women in Southern Province deliver, at home, Boston University/ZEBS will explore possibilities for working with traditional birth attendants (TBA) to improve uptake and recording of NVP prophylaxis in these settings:

| Act | tivity Category                                  | % of Funds |

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

CDC/HQ / Catholic Relief Services

Planned Funds:

**Activity Narrative:** 

These activities will result in 1) increased access to quality PMTCT services 2) quality PMTCT services integrated into routine maternal and child health services and 3) increased use of complete course of ARV prophylaxis by HIV+ women.

Catholic Relief Services (CRS) was awarded USG Track 1.0 funding and is currently implementing the ART program at 5 rural mission hospitals of Zambia. In order to provide a holistic approach to ART services and in line with GRZ recommendations that ART sites should also be PMTCT sites, PMTCT activities have been planned at these 5 institutions.

CRS, through its sub-partner Churches Health Association of Zambia (CHAZ), will institute PMTCT services at 5 mission hospitals in Zambia. CHAZ will, in partnership with GRZ, institute PMTCT services in these hospitals. Health workers will be trained in counseling, the minimum package of care of PMTCT, logistics, data management and quality assurance as new and on going activities in these districts. Owing to staff shortages and the overwhelming workload that PMTCT introduces to already overstretched staff at the maternal and child health departments, CHAZ will also meet immediate staff shortages. CHAZ will support districts to develop networks and referral systems for pregnant women to access other services offered at health centers and in the communities. Key to the creation of these networks will be linking HIV+ pregnant women to ART services.

As part of their program, CHAZ will reduce HIV-related stigma and discrimination and will raise community awareness for the PMTCT program through the development of materials and IEC strategies. The communities, especially men, will be mobilized and encouraged to participate in order for the program to be effective.

CHAZ will also explore possibilities for working with traditional birth attendants (TBA) to improve uptake and recording of NVP prophylaxis in these settings.

CRS will also provide outreach to the police in these areas.

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

UNCLASSIFIED 12/13/2004

#### **Activity Narrative:**

These activities will result in 1) increased access to quality PMTCT services 2) quality PMTCT services integrated into routine maternal and child health services and 3) increased use of a complete course of ARV prophylaxis by HIV+ women.

The Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) with sub-grants to University of Alabama, Birmingham and a local Zambian NGO, the Center for Infectious Disease Research, Zambia (CIDRZ) receives funding for the implementation of PMTCT programs. CIDRZ, in partnership with GRZ, will institute PMTCT services in 8 districts of Zambia covering 3 provinces. Lusaka Province, Eastern Province and Western Province. The Lusaka Health district and the 3 districts in Eastern Province (Chipata, Katete, and Petauke) are among the most populated districts in the country.

Continued support will be provided for the 24 clinics providing PMTCT in Lusaka Health District as well as the University Teaching Hospital (UTH). Currently, over 4000 women are tested for HIV in Lusaka each month; over 1,000 of whom are THIV-infected; all are offered single-dose NVP. Note that this partner also receives a Track 1.0 funding for rapid scale-up of ART services in these same clinics in Lusaka. CIDRZ will strengthen PMTCT referrals to HIV care and treatment programs, including screening of women antenatally for symptomatic AIDS and/or CD4 count. CIDRZ will also institute in FY05 a Mother Infant Rapid Intervention At Delivery (MIRIAD)-type intervention for women with undocumented HIV status at University Teaching Hospital and 3-4 clinics in urban Lusaka district; approximately 3,000 women with undocumented HIV status will be reached at labor and delivery during the first year. Timely testing of women in labor, or of the neonate immediately postpartum, enables immediate provision of ARV prophylaxis to mother and infant (JAMA 2004; 292:219-223).

In partnership with district health teams, CIDRZ will institute and provide continuing support to PMTCT services in 10-15 clinics in 3 districts in Eastern Province (Chipata, Katete, and Petauke) and in all health centers in Mongu and Kaoma districts of Western Province. An additional 2 new districts in Western Province, in consultation with MOH, will start receiving support from CIDRZ for implementation of PMTCT services. These districts in Western Province are mostly rural and the majority of women deliver at home.—CIDRZ will explore possibilities for working with traditional birth attendants (TBA) to improve uptake and recording of NVP prophylaxis in these settings.

Health workers will be trained in counseling, the minimum package of care of PMTCT, logistics, data management and quality assurance as new and ongoing activities in these districts. Owing to staff shortages and the overwhelming workload that PMTCT introduces to already overstretched staff at the maternal and child health departments, CIDRZ will also assist the districts with immediate staff shortages. CIDRZ will support districts to develop networks and referral systems for pregnant women to access other services offered at health centers and in the communities. Key to the creation of these networks will be linking HIV+ Pregnant women to ART services. They will work with CDC to implement the continuity of care smart card which will facilitate improved longitudinal care for pregnant women.

As part of this program, CIDRZ will reduce HIV-related stigma and discrimination and raise community awareness for the PMTCT program through the development of materials and IEC strategies. The communities, especially men, will be mobilized and encouraged to participate in order for the program to be effective and will also provide outreach to the police.

Please note that the following 'targeted evaluation' activity is not funded by the COP 05 but it is mentioned here for completeness. The Epidemiology Branch of the Division of HIV/AIDS Prevention (DHAP) and the Care and Treatment Branch of the Global AIDS Program (GAP), CDC in Atlanta are jointly coordinating and funding an observational study to examine the response to highly active antiretroviral therapy (HAART) that includes a non-nucleoside reverse transcriptase inhibitor (NNRTI) among women who have been exposed to single-dose nevirapine

Page 50 of 306

for PMTCT as compared to those who have not. This is a prospective, multi-country, multi-site observational study consistent with the goal to conduct clinically applicable operational research that is expected to directly inform program implementation. In Zambia, this targeted evaluation is being conducted in Lusaka Health District by EGPAF/CIDRZ, at sites where clinicians are providing NNRTI-based HAART to persons attending their clinics.

Planned Funds:

**Activity Narrative:** 

These activities will result in 1) increased access to quality PMTCT services 2)—quality PMTCT services integrated into routine maternal and child health services and 3) increased use of complete course of ARV prophylaxis by HIV+ women.

Academy for Educational Development, through its sub-partner Linkages – AED, will continue providing PMTCT services in 2 districts of Southern Province. As an ongoing activity, Linkages – AED will ensure that health workers are trained in counseling, the minimum package of care of PMTCT, logistics, data management and quality assurance. Linkages - AED will support districts to develop networks and referral systems for pregnant women to access other services offered at health centers and in the communities. Key to the creation of these networks will be linking HIV-positive pregnant women to ART services.

As part of the program, Linkages - AED will raise community awareness for the PMTCT program through the development of materials and IEC strategies. The communities, especially men and community lay counselors, will be mobilized and encouraged to participate for the program to be effective.

These activities will focus also on reducing HIV-related stigma and discrimination in the community.

The following target categories are not applicable for these activities, which include procurement, a leadership study tour for synergy development between regional Emergency Plan PMTCT programs, assessments, and evaluations

Program Area: Prevention of Mother-to-Child Transmission (PMTCT)

Budget Code: (MTCT)
Program Area Code: 01

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: CDC GAC / US Centers for Disease Control and Prevention Planned Funds:

**Activity Narrative:** 

The USG provides technical assistance to MOH and NAC. As part of the technical assistance, the USG will support the national PMTCT program through the procurement of supplied at central level. Other activities will include supporting 1. MOH implementing teams to conduct a PMTCT assessment review of sites and a PMTCT knowledge, attitude, behavior and knowledge study. It is anticipated that the results of the review will highlight strengths and weaknesses of the program and help in the standardization of service provision by the various implementing partners. With a newly appointed PMTCT national team, a study tour has been organized to allow them to visit other PMTCT sites in 1-2 countries with successful and rapid scale-up of PMTCT activities in the region. The aim of this tour will be for the team to gain insight on how other programs are successfully managed and how the national program in Zambia can be further strengthened. The USG will not only provide technical assistance to the PMTCT Technical working but will also assist in the dissemination of key research findings.

In an effort to improve the national program, USG in partnership with GRZ, will evaluate an inexpensive and less complex approach for use in the diagnosis of infant HIV-1 infection in Zambia. This targeted evaluation will focus on 1) an inexpensive "boosted" p24 antigen and 2) a much simplified dried blood spot PCR assay, both for potential use in infant HIV diagnosis. This evaluation will assist the national program in adopting a cheaper and simplified way of testing infants born to HIV+ women. This is a high-priority area for the MOH. Currently, due to the cost associated with infant HIV testing, infants are not tested (except in a few research settings). CDC will provide technical assistance in the development of protocols and implementation of the evaluation.

The above activities will contribute to the following result:

 Improved logistics system for the rollout of PMTCT services and a full supply of diagnostics and related medical supplies achieved.

·Full supply of diagnostics and related medical supplies achieved

•Improved logistics system for the roll out of PMTCT services

| Activity Category                         | % of Funds |

Budget Code: (MTCT)
Program Area Code: 01

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: Prevention, Care and Treatment Project / Family Health International Planned Funds:

**Activity Narrative:** 

The Family Health International Prevention, Care and Treatment (PCT) Project will support the Zambian Government (GRZ) to strengthen and expand PMTCT services in five provinces: Central, Copperbelt, Luapula, Northern and Northwestern. The PCT Project partner organizations—International AIDS Alliance, Churches Health Association of Zambia (CHAZ), Expanded Church Response (ECR), and Management Sciences for Health (MSH)—will contribute to improving the accessibility, quality, and usage of PMTCT services with an overall target of 171,370 pregnant women receiving PMTCT services in FY05.

At the national level, PCT will provide technical assistance to the national PMTCT task force and MOH PMTCT managers to: develop and implement strategies for scaling up accessible, quality PMTCT services; establish quality assurance and monitoring programs; review/revise/disseminate national PMTCT training materials and guidelines as needed; and strengthen the continuum of care and referral systems via integration of PMTCT with CT, ART, and palliative care services within and between provincial and district health facilities and community programs.

At the provincial and district levels, PCT will assess the usage of PMTCT services to formulate recommendations for improving PMTCT services as well as provide technical assistance and training to implement the minimum package of PMTCT services according to the national scale up plan. This includes ARV prophylaxis, post-natal counseling, family planning counseling, infant feeding counseling, community follow up and support, and mother-infant tracking. PCT will train 126 health care providers to implement this minimum package of PMTCT services at 42 health facilities.

Every eligible HIV-infected woman will be offered ARV prophylaxis for herself and her infant, with a total of 18,000 mother-infant pairs receiving ARV prophylaxis. HIV-infected postnatal women will be encouraged to seek follow up care and support at the nearest health facility with district staff will tracking mother-infant pairs to facilitate this follow-up. An estimated 12,600 infants (70% of which will require ARV prophylaxis) will be followed for 18 months, and then tested for HIV at the end of this time period. The project team will also provide information on safe feeding options to MCH staff and train health workers on infant feeding counseling as part of this comprehensive training program. Furthermore, a small grants program, supported by International HIV/AIDS Alliance, will contribute to efforts in community level and police PMTCT activities.

The PCT team will coordinate with existing NGOs/CBOs/FBOs, community, and police groups in engaging community leaders and members, including religious/traditional leaders, to promote and encourage pregnant women to seek PMTCT services and to reduce stigma associated with HIV/AIDS at the community and health facility levels.

Table 3.3.1: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: DOD Deferred / JHPIEGO Planned Funds:

**Activity Narrative:** 

This activity is being partially funded with Deferred funding.

In 2004; the Zambian Defense Force had no PMTCT programs in its 69 facilities. The goal of this activity is to implement a comprehensive PMTCT program at four military hospitals. The award includes multiple activities to address PMTCT for military and peacekeeping personnel, as well as their families. A focus of this award is to create linkages between PMTCT services and home-based care, post-test clubs, peer support groups, mother's support groups, and groups of people living with HIV/AIDS. There will also be a focus on strengthening male involvement programs.

The training component will focus on building staff capacity to implement ART, develop PMTCT policy, and enhance quality assurance and supportive supervision. Providers will be trained in the clinical delivery of PMTCT. In addition, peer counselors will be trained to support seropositive mothers post-natally.

Commodity procurement will include the purchase of PMTCT and antiretroviral drugs. Local organizations will build their capacity with training focused on manpower and planning, procurement, policy development, and program execution. Performance improvement systems will also be established. Finally, strategic information will include gathering information on numbers of clients treated; infections averted, and overall implementation.

Through all of these activities, these four hospitals will be able to provide services for 400 new clients. The goal of this activity is to implement a comprehensive PMTCT program at four military hospitals. Women testing HIV positive requiring long term ART would be referred to the Maina Soko Military Hospital or a Ministry of Health clinic providing ARTs in their local community. The Zambian Defense Force is not receiving ARTs from the USG other than PMTCT initial ARTs.

**Current Program Context:** 

The USG continues to take the lead in supporting and expanding Zambia's National HIV/AIDS Strategic Plan objective on prevention that gives priority to reducing high risk behavior through the promotion of abstinence, partner reduction and mutual fidelity. Appropriate ABC behavior change interventions are targeted at national, community and individual levels to achieve maximum impact in changing social norms around sexual behavior. The USG collaborates closely with donors; such as the Global Fund, World Bank, UNICEF, and DFID, who are also ---implementing prevention programs to reach as many Zambians as possible with harmonized prevention messages, While awareness of HIV/AIDS is fairly universal, youth and adults continue to engage in behavior that put them at risk of contracting HIV. The 2003 Zambia Sexual Behavior Survey indicated that 29% of men aged 15-59 years and 16% of women aged 15-49 years reported a non-regular partner in the last 12 months; and 33% of single male adolescents and 28% of single female adolescents had sex in the last 12 months. HIV prevalence is 6% for females aged 15-19 years and 11% for those aged 15-24 years. In FY04, the USG and its partners are implementing a unified ABC prevention approach that emphasizes abstinence for youth, being faithful for adults and condoms for high rick groups InInhlearly half (49%) of Zambia's population is below the age of 15. For youth, the USG supports FBOs, CBOs, NGOs and schools to implement comprehensive community based programs to promote abstinence and behavior change. Students, out of school youth, OVCs, married/unmarried youth, and parents/guardians participate in school-based programs, sports camps, faith-based retreats, community drama, art competitions, anti-AIDS clubs, , and initiation ceremonies to promote abstinence. A high priority is given to promoting male responsibility for boys, particularly fidelity, along with life skills training for girls and young women in negotiation techniques and strategies. VnNFor adults, the USG implements community and individual level education and messaging promoting partner reduction and mutual fidelity through clergy, traditional leaders, employers, agricultural extension workers, teachers, uniformed personnel, police, and government officials. Programs that promote Being Faithful are implemented in areas where home-based care and other community prevention programs are being implemented, in public and private workplace programs, in rural agricultural areas, in mining areas, at military bases, in universities, and in places of worship. \n\nThese community and individual level programs for both youth and adults are supported nationally by coordinated mass media campaigns promoting A/B messaging through print, local radio and television. Issues of stigma and discrimination are addressed throughout all prevention activities. Youth, adults and priority groups are encouraged to openly discuss their fears, concerns and prejudices as they relate to people living with HIV/AIDS to reduce stigma and discrimination. In/n Local CBOs and FBOs play a unique role in influencing community and individual acceptance of healthy social norms and are often the best positioned groups to implement A/B programs. The USG is leveraging their distinct advantage by providing sub-grants for internal capacity building in financial and program management, as well as providingtechnical assistance and training to improve current programs, ensure consistent messaging and achieve greater reach. CBOs/FBOs are being used to the greatest extent possible with the vision of sustainable local leadership for HIV prevention activities. In FY05, the USG will intensity this comprehensive A/B strategy to achieve greater reach; while CBOs/FBOs partners will continue to receive support for capacity building, training and funding to strengthen and expand their ability to reach their targeted constituencies with consistent and effective A/B interventions.\in

**Activity Narrative:** 

This activity contributes to increasing the number of FBOs implementing — abstinence only activities and to increasing the use of local and FBOs and networks to change social and community norms to support AB.

The RAPIDS Project is a consortium led by World Vision with Catholic Relief Services, Africare, Salvation Army and the Expanded Church Response that provides community based care and support to people infected with or affected by HIV/AIDS. This includes PLWHAs, OVCs, and youth. The HIV prevalence rates for youth is high and for any impact on the epidemic, it is critical that the USG support youth to prevent transmission among this very vulnerable group. RAPIDS will implement abstinence promotion activities for youth in 44 districts of all 9 provinces in coordination with other USG supported ABY programs so as to prevent any geographical overlapping or duplication. Thirty FBOs will receive training in financial and project management and be provided with small grants to implement abstinence only programs. Every effort will be made to build the capacity of FBOs to implement effective abstinence programs. FBO/CBO facilitators will be trained to train clergy, teachers, supervisors, peer educators, and staff in promoting -abstinence along with being faithful. To decrease economic vulnerability among youth, abstinence interventions will be combined with business management and vocational training. Youth sports camps will be conducted to train peer educators: in abstinence promotion. Traditional advisors will be trained to promote abstinence and faithfulness as part of girls' "coming of age" ceremonies. Boys will receive training on abstinence, responsibility in society, life skills and respect for women. Community-level sensitization meetings will be carried out. Africare will promote abstinence using innovations such as youth-led community radio programming, youth theater, and school youth parliaments.

The RAPIDS network of partners will also be used to promote fidelity and partner reduction among adults living in RAPIDS project areas. RAPIDS will integrate "Being Faithful" messages into their extensive home-based care programs to reach as many community members as possible. Home-based care givers will be trained in AB messages and in discouraging cultural practices that may lead to HIV transmission. RAPIDS will implement training in abstinence and being faithful promotion for members of District Development Committees, District AIDS Task forces, youth and OVC subcommittees and community care coalitions. All AB or A only programs will integrate activities and messages to reduce stigma and discrimination.

Program Area: Abstinence and Be Faithful Programs **Budget Code: (HVAB)** Program Area Code: 02 Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: DOD / Project Concern International **Planned Funds:** A program in Abstinence/Be Faithful for the Zambian Defense Force remains **Activity Narrative:** critical as military personnel continue to participate in peacekeeping missions with the United Nations around the world. At any given time, 1,800 personnel areassigned to peacekeeping missions outside of Zambia, with at least 5,000 - 7,000 assigned to eight international borders throughout the year. Activities will include training, logistics, materials development and strategic information focused on promoting abstinence and faithfulness. Two drama teams will be trained on abstinence and faithfulness messages and HIV/AIDS counseling and testing messages, reinforcing behavior change. Logistics and materials development is to assist the drama team, providing materials to promote HIV prevention that are appropriate for the military. Brochures, CDs, and videos will be

distributed to 69 medical facilities.

Two drama teams will be trained to visit 40 military units to promote abstinence, faithfulness, and HIV counseling and testing to the high-risk Zambian Defense Force personnel. Finally, SI collection will help to identify the number of individuals reached with these prevention messages.

Page 72 of 306

#### **Activity Narrative:**

The activity will result in improved knowledge regarding HIV antiretroviral treatment, PMTCT, and prevention of sexual HIV transmission in Zambia.

A mid-term assessment of a Botswana radio drama which uses CDC's MARCH Model (Modeling and Reinforcement to Combat HIV/AIDS) to encourage HIV prevention behaviors and positive attitudes toward People Living with HIV/AIDS and availability of antiretroviral treatment indicates that the entertainment-education program is having desired effects. The weekly radio program, Makgabaneng, was launched in August 2001. The 15-minute episodes air twice weekly on two nationally broadcast stations. The scripts are written, produced, and acted in the local language by local talent. The characters provide models for behavior, and the storylines reflect the culture and support services of the local environment. The Makgabaneng program also includes listening discussion groups and road shows to reinforce prevention behaviors and encourage listenership in the community. A national survey conducted in May 2003 found that Makgabaneng was extremely popular, nearly half (45%) of respondents said that they listened to it one or more times every week. Weekly listoners to the drama were more likely to have greater knowledge about key HIV issues (such as RMTCT and ABC) and less likely to have stigmatizing attitudes. Weekly listeners were also more likely to intend to get HIV testing and to discuss HIV testing with their partner.

To support the development of an indigenous radio serial drama in Zambia, based on CDC's MARCH behavior change strategy, CDC will provide technical assistance in training staff and partners and will work collaboratively with local NGOs, especially the Zambia Centre for Communication Programmes (ZCCP), and ongoing USAID-supported behavior change communication projects in-country. The resulting radio serial drama will directly support the prevention, treatment and care goals of the President's Emergency Plan in Zambia.

Planned activities in Zambia will include: meet with local NGO and government agencies working in behavior change, brief them on proposed activities, and solicit their support and participation; conduct initial assessment of behavior change needs, capacity, and existing activities in country; hire a project coordinator; conduct training for stakeholders and key partners on using behavior change principles to design effective interventions; work closely with partners to develop an. integrated plan for addressing behavioral objectives, working with existing or easily-developed Zambian capacity, partners, and infrastructural resources; conduct formative evaluation in key areas if needed (e.g. to understand individual, social and environmental factors that inhibit or facilitate specific behaviors, such as adherence to antiretroviral treatment); use existing research whenever possible; develop a collaborative relationship with a national or regional broadcaster: develop an advisory board of key partners and technical advisors to provide guidance to the project team; set up and staff a facility (or augment an existing facility and project team) to write and produce the radio serial drama; conduct trainings on MARCH methodology, scriptwriting, recording, and post-production; and develop evaluation plans and protocols.

These activities will focus also on reducing HiV-related stigma and discrimination in the community.

Program Area Code: 02

Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: EQUIP I / American Institutes for Research Planned Funds:

**Activity Narrative:** 

This activity will contribute strengthening the capacity of local community organizations to implement AB programs and expanding programs that target youth with comprehensive skills-based AB prevention activities.

AIR will carry out teacher pre and in-service training on HIV/AIDS prevention for students with an emphasis on abstinence and being faithful. It is expected to reach 400 schools, 800 teachers (200 Head Teachers and 200 Senior teachers), 1,200 pre-service students, and 200,000 pupils.

In addition, AIR will review existing A/B prevention curriculum and programs, particularly in regard to (a), the duration of training and (b), supervision/follow up systems. AIR will assist the MoE in introducing new modules on preventing gender-based sexual violence that include coerced sexual activity at school between teachers and students, between teachers, and between students, as well as a module on anti-AIDS mentoring clubs, that link with training/mentoring of OVC scholarship recipients.

AIR will help to establish a school managed grants program to implement Abstinence and Being Faithful prevention interventions for youth that is aimed to be student-driven, with important parental involvement and will focus on reducing stigma and discrimination.

AIR will build on existing HIV/AIDS clubs within schools and distribute 200,000 leaflets and 70,000 lifeskills books. An assessment of HIV/AIDS clubs within schools to determine current level of effectiveness will be conducted. Efforts will be made to build the MoE's capacity to scale up successful programs to a national level, according to ministry demands.

These activities will focus also on addressing male norms and behaviors in the community.

Students are among the highest infected and affected groups by HIV/AIDS. The universities have established policies and counseling centers, but due to resource constraints. programs on campus are limited. This project will build on ongoing activities and, establish a training program for 200 students, 40% women, to serve as peer-counselors to develop appropriate information materials for students, and to organize on campus activities such as competitive debates, concerts, essay contests and HIV/AIDS Day events. Students selected for the training program have to pledge to serve as peer counselors and provide practical services to students in disseminating information in dorms and discrete locations on campus. The goal is to encourage students to increase their awareness of HIV/AIDS, know their status, and exercise safe sexual practices - urging students to abstain, be faithful, fight stigma at home, school, and church, and advocate change in sexual behavior. **Activity Category** % of Funds ☑ Information, Education and Communication 70% ☑ Training 30%

Mechanism/Prime Partner:

State / National Arts Council of Zambia

Planned Funds:

Activity Narrative:

In collaboration with other USG partners, the PAS will utilize their unique advantage of working with regional and Zambian artists, organizing cultural programs and a strong relationship with Zambian radio and television media to promote A & B, with an emphasis on B. Local celebrities can be effective in spreading prevention messages, which increases their ability to reach large audiences. Using culture as a vehicle for HIV/AIDS prevention message could focus exclusively on the use of Zambian celebrities. Zambian musicians and artists are increasingly gaining stature in Zambia largely through the efforts of the National Arts Council of Zambia and the establishment of recording companies such as Mondo Music. These celebrities have a tremendous potential to reach Zambians, both youth and adults, with HIV/AIDS prevention messages. Radio remains the primary media of choice in Zambia, and music and dance are the most popular forms of cultural expression. Through a grant to the National Arts Council of Zambia - the driving force behind cultural development in Zambia - at least five select Zambian celebrities would deliver HIV/AIDS prevention messages at festivals and concerts throughout the country, specifically Lusaka, the Copperbelt. and Livingstone. They would also be asked to record public service messages for play on radio stations countrywide. Zambian celebrities (many of whom have participated in US Embassy activities in the past) who could be invited to participate include:

Music: pop singers Exile, Nalu, Danny, JK, Lindiwe (winner of Project Fame Africa-wide competition), Angela Nyirenda, Mashombe Blue Jeans; jazz singers Marsha Moyo & Maureen Lilanda; instrumentalist Uncle Rex (winner of 2004

Ngoma Award)

Pop Culture: Charise Mann (winner of Big Brother Africa reality show)

Artists: Victor Makashi, Eddie Mumba, Patrick Mumba

Prevention activities for these GDAs will focus on promoting Being Faithful as the vast majority of miners and farmers are married. SHARE will provide a sub-grant to the Comprehensive HIV/AIDS Management Program (CHAMP) to provide technical support as the USG contribution to the GDA. Significant resources, both cash and kind, will be leveraged from the private partners: The Agribusiness GDA will be led by Dunavant Cotton with Zambia Sugar and Clark Cotton, three of the largest agribusinesses in Zambia. This GDA will implement a HIV/AIDS prevention outreach program for 200,000 small scale cotton and sugar farmers, distributors and outgrowers to promote Abstinence and Being Faithful. The contribution from the private sector to this GDA will be The Extraction GDA will be led by Konkola Copper Mines with Mopani Mines, Kansanshi Mines, and the Copperbelt Energy Corp. This GDA will implement HIV/AIDS prevention outreach programs for 126,000 employees, miners and their families and surrounding community to promote abstinence and being faithful. The contribution from the private sector will be in the amount of In addition. SHARE will working with local NGO partner, ZHECT, to provide on-going state-of the-art technical assistance to workplace A/B prevention programs at 45 small, medium and large businesses and two ministries (Ministry of Agriculture and Cooperatives and Ministry of Commerce, Trade and Industry). SHARE will initiate relationships with 25 new businesses and one additional ministry to develop appropriate workplace A/B programs. Using the proven FACEAIDS model, SHARE will work with partners to implement A/B strategies, plans, materials and activities and train skillful peer educators at all workplaces to reduce stigma and discrimination and address male norms that lead to risky behaviors. SHARe will work with traditional leaders, religious leaders, and political leaders to advocate for behavior change that promotes A&B. **Activity Category** % of Funds ☑ Community Mobilization/Participation 10% ☑ Workplace Programs 90%

Budget Code: (HVAB) Program Area Code: 02

Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Social Marketing / Population Services International

Planned Funds:

**Activity Narrative:** 

Population Services International, through its local affiliate Society for Family Health (SFH), will contribute to the promotion of a balanced approach to HIV/AIDS prevention for urban at-risk youth through the development of a weekly radio show and support to Anti-AIDS clubs in schools. The show, a follow-on to the successful "Club New Teen Generation" radio program which has just ended, will be produced by youth and for youth. Programs will focus on healthy lifestyle behavior including A, B and C messages; creating dialogue among youth and between youth and influential people (including parents, teachers and popular figures); providing linkages to youth-friendly health and psycho-social referral services; and discussing gender issues and improving negotiation skills for safer sexual behavior.

The activity will: improve confidence and skills needed for youth to protect their health by abstaining from sex or—for those who are sexually active, negotiating condom use with their partners; increase the perception and internalization of HIV/AIDS risks; increase social support for youth to practice preventive health behaviors including abstinence and condom use; and increase access to HIV/AIDS education and services.

Furthermore, the youth radio show will expand upon existing relationships with Anti-AIDS clubs in selected schools to introduce Anti-AIDS activities. SFH communications teams already work closely with primary and secondary schools across Zambia to educate youth on a variety of health issues. Initial dialogue with selected schools indicates that strong interest exists to engage in health education activities, but the Anti-AIDS clubs do not have adequate resources and support. Affiliating Anti-AIDS Clubs with the youth radio show will allow the project to channel existing interest and energy in Zambian schools into successful HIV/AIDS education programs.

Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: Health Communication Partnership / Johns Hopkins University Center for Communic Planned Funds:

**Activity Narrative:** 

The Health Communication Partnership (HCP) will work closely with other USG activities to support abstinence for youth and "be faithful" for adults. HCP will work at community level in conjunction with other USG and local partners and will also provide national and local media and materials support for these messages.

"Treasuring the Gift" is a faith-based youth reproductive health manual, which focuses on engaging youth in dialogue, sharing information on reproductive health issues, and building life skills that promote abstinence and negotiation within relationships. The use of this manual will be extended to cover as many religious youth groups as possible all over the country. The capacity of community drama/ rural theater troupes will be built to promote messages and model ways to remain abstinent and be faithful while also breaking down stigma and other barriers that may prevent people from communicating and taking action around these issues. KWATU the Zambian adaptation of the successful South African drama, "Soul City," will be used as a Distance Education vehicle to promote on air discussion of issues around abstinence and being faithful in local languages. Helping Each other to Act Responsibly Together (HEART) has been a multi media campaign used to promote successful dissemination of youth reproductive health messages in Zambia: This campaign will be expanded to focus on reaching youth in rural and. peri-urban areas with messages on abstinence and delayed sexual debut. Mass media - print, radio and TV campaigns focusing on youth and HIV prevention -will be-vigorously-pursued. Youth Movement for Healthy Lifestyles through the Arts. contests- drama, writing and music contests at community, district and provincial levels-will be carried out to provide opportunities to the youth to express their creativity in response to HIV/AIDS in Zambia. Sports for Life campaign activities and life skills football camp programs with focus on promoting A/B among the youth will be extended to cover more rural and peri-urban youth.

Addressing adult populations, a nation-wide care and compassion movement will be launched to enable religious and traditional leaders to spearhead the promotion of abstinence and being faithful in their congregations and communities in addition to their role as models for changing norms around male responsibility.

Neighborhood Health Committees will be encouraged to include development of Community Action Plans for HIV prevention and management as a priority.

A 24-hour toll free HIV/AIDS Talk Line exists in Zambia providing opportunities for callers to access critical information related to prevention, care, and support.

These activities will focus also on increasing gender equity in HIV/AIDS programs and reducing violence and coercion in the community.

Table 3.3.2: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: Y-Choices / Pact, Inc. Planned Funds:

**Activity Narrative:** 

Youth and Children with Health Options Involving Community Engagement Strategies (Y-Choices) will focus on community involvement in helping children and youth make educated choices about behaviors that affect their health.

In FY05, Puct Zambia will provide sub-grants to 25 local FBOs and CBOs to build their capacity to: develop and provide skills-based A and B education for youth in the community; promote abstinence, healthy behavior and choices for youth in the community (both in- and out-of-school); and effectively design and manage A and B intervention programs. Approaches will include school-based groups and clubs (e.g. Anti-AIDS clubs), peer education, youth-adult communication, adult-adult communication, mobilization of peer leaders, and community and national radio. Organizations supported will include 9 FBOs, 14 NGOs and 2 CBOs, Y-Choices will collaborate and coordinate with other USG activities working with youth.

One hundred blood units is the annual estimated blood transfusion need in Zambia. Currently, 40-45% of blood transfusions occur in children under five and 20% in complicated pregnancies. The Zambia National Blood Transfusion Services (ZNBTS) is charged with ensuring the availability of safe and affordable blood services throughout Zambia. Each of the nine regions houses a regional blood transfusion center. Eighty-one blood banks are located throughout the country in government and mission hospitals. The Zambian Defense Force (ZDF) maintains a separate military blood donation program. The blood safety program in Zambia was funded by the European Union, which donated 3.7 million Euros between 2000 and 2004 to improve building and basic equipment infrastructure. The Zambian Defense Force and the national blood safety programs are currently funded exclusively through the GRZ and through track 1.0 funds from the USG. \n\nThe ZNBTS recently carried out a strategic planning exercise in which they found a general lack of expertise amongst the clinical staff in blood safety protocols and the appropriate use of blood products and an inadequate quality assurance system: The exercise also exposed management weaknesses. The ZNBTS concluded that moving from the currently decentralized system to a network model would improve the efficiency and effectiveness of service delivery. Staff retention in the ZNBTS and the collection of a sufficient quantity of blood to fulfill the needs of the country are additional hurdles to maintaining a safe blood supply. Based on the overall findings of the strategic planning exercise, the ZNBTS developed a way forward which is in line with the National Health Sector Policy and Strategic Plan.

#### **Current Program Context:**

HIV/AIDS transmission through unsafe injection practices, while accounting for a small percentage of transmission, is largely preventable. As a result, in 2000, Zambia constituted a National Infection Prevention Working Group to spearhead activities to strengthen infection prevention practices, including those for injection safety. With support from the USG, national infection prevention guidelines were developed and adopted in 2003 and training of health care providers around the country in infection prevention is ongoing. In In Zambia continues to face the challenge of lack of application of standard procedures in the handling of hazardous materials and disposal of medical waste in all health facilities, including the Zambia Defense Force medical system. Contributing factors include the severe human resource constraint in the health sector and resulting high work load and high stress-leading to reduced ability to concentrate and limited availability of sterile injection equipment, sharps boxes etc. The Global Access to Vaccines Initiative (GAVI) has been providing support for safe injection equipment for the national childhood immunization program. However, this is ending soon and while the government of Zambia has committed some of its own resources to make these items available, it is also looking for more support from donors. Availability of injection equipment and sharps boxes for other medical injections continues to be limited \n\nln FY04, through the Track 1.0 award to Chemonics, the USG has continued its support to the government of Zambia to implement both national and district level activities to improve injection safety. At national level, activities have included supporting the revision of the Zambia National Formulary to substitute some injectable medications with oral drugs, and formulation of guidelines and standards specific for injection safety to be added to the infection prevention quidelines. In the two focus districts, work has included training of more than 200 health workers involved in handling sharps in infection prevention and safe injections, purchasing of needles, sharps boxes and other supplies, and advocacy with local District Health Management teams to increase the budget allocation for needles, sharps boxes, disinfectants and other protective materials and clothing. In addition, the USG is supporting the development of Post Exposure Prophylaxis (PEP) protocols and guidelines for health care workers in facilities that are providing ART. In In FY05, the USG will continue this support to GRZ including completing the development, dissemination and implementation of a national infection prevention and injection safety strategic plan. The support will further ensure expansion of training in infection prevention and injection safety, orientation of health care managers and advocating increased resource allocation to injection equipment and protective clothing, the purchase and distribution of single-use needles and other supplies, and increased access to PEP for health workers who need it. The interventions will cover all sub sectors of the health system, including the Zambia Defense Force health system. The program will also include a nation-wide communication campaign to educate the general population about the efficacy of oral medications and risks of injections.

**Current Program Context:** 

The GRZ HIV/AIDS prevention strategy is based on the recognition that a significant portion of people aged 15-44 are engaged in high risk behaviors and gives high priority to increasing availability of condoms, improving timeliness and effectiveness of STI diagnosis and treatment for high risk groups. Many CBOs and FBOs support the government prevention strategies, targeting high-risk groups to expand their prevention activities.—The GRZ employs the syndromic management of STIs. STI prevention and treatment programs are technically in place in the civilian and military sectors, but shortages of doctors and nurses have forced less experienced and educated personnel such as clinical officers (who have six months of theory and three months of experience), or two year Licensed Practical nurses, to become the front line workers in STI diagnosis and treatment. The limited training of these staff members has resulted in misdiagnosis of STIs. Currently, the USG is the largest donor working to prevent HIV transmission in high risk groups. JICA also works with high risk populations to reduce HIV transmission and provides significant support for the Corridors of Hope Project in Zambia, including CT test kits, STI drugs and testing supplies, and support for management of service delivery. In/nAs part of its comprehensive and mutually supportive ABC interventions, the USG supports activities that promote healthy practices and consistent 1 condom use among high risk individuals. Activities are targeted at identified high risk populations such as discordant couples, commercial sex workers and their clients, fishing communities, truck and mini-bus drivers, informal traders, police, military personnel, and refugees. To contain the spread of the epidemic, the USG and its partners are expanding and strengthening services and activities targeted at high risk populations across the country at borders, along in-land high volume transit points, at bars, nightclubs, hotels, truck parks, fishing communities, urban centers, military bases and refugee camps. In addition, the USG is finding innovative ways to identify, reach and serve discordant couples, who represent 21% of the married population. To reduce HIV transmission, the USG promotes and supports routine CT for STI clients in both civilian and military populations. The USG supports improved STI syndromic management by training health care workers, lab techs, and lay counselors in the recently revised national STI management guidelines and protocols. In addition, the USG supplies lab equipment. STI and HIV test kits and drugs to the ZDF and non-government service delivery sites targeting high risk groups, such as the Corridors of Hope cross border drop in centers and New Start Clinics. The USG is developing referral systems for high risk individuals who test positive for HIV to access ART services and is scaling-up targeted health communication efforts, behavior change campaigns for high risk groups such astruckers, and access to both male and female condoms among discordant couples and other high risk groups. The USG has expanded the Corridors of Hope cross-border initiative from 7 to 10 sites and has integrated CT with STI management while continuing to expand its outreach activities, condom distribution and social marketing, andbehavior change campaigns for high risk groups. Furthermore, the USG and its partners have expanded access to condoms and CT for high risk populations in high prevalence urban areas. The USG promotes strengthening ties between the Ministry of Health and Ministry of Defense in the areas of STI Syndromic Management and HIV diagnostic training. \n\n

**Activity Narrative:** 

This activity will contribute to an increase in access to HIV/AIDS prevention services for high risk populations and in fully integrating STI management, HIV CT services, partner reduction promotion and condoms for high risk populations.

The Corridors of Hope (COH) in Zambia is considered to be the model cross border initiative in the Southern African region. CoH targets high risk men and women, including sex workers and their clients, truck drivers, mini bus drivers, and uniformed personnel such as police, customs officers and border guards, at border and high transit sites to reduce the transmission of HIV. These sites include Chawama, Chirundu, Livingstone, Kazungula, Kapiri Mposhi, Kasumbalesa, Ndola, Chipata, Katete, and Nakonde. Technical strategies include STI management, CT, referrals for ART, behavior change interventions that promote partner reduction... and condom use, and condom social marketing. Services are provided at 10 service delivery sites and through outreach workers. FHI provides technical assistance and project management and monitoring. World Vision with support from both the USG and JICA manages the drop in centers and provides STI diagnosis and treatment along with CT and client counseling. Society for family Health will implement behavior change interventions that promote STI treatment, CT, partner notification, adherence to treatment, and consistent condom use, along with positive living and reduction of stigma for PLWHAs. Proven communication methods are used such as peer education and outreach work, drama, one to one interpersonal counseling, group discussion, mass media and local-based promotional activities. During FY 05, the CoH will explore the possibility of expanding the project to two new border/high transit sites.

As a partner in CoH, Zambia Health Education, Communication and Training (ZHECT) works with 15 trucking companies to implement HIV/AIDS workplace activities and safe stops for truckers. 150 HIV/AIDS peer educators will be trained to promote behavior change among truckers and promote STI treatment, counseling and testing and access to ARVs. Policies and activities will be implemented to reduce workplace stigma and discrimination.

Table 3.3.5: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: IMPACT-Deferred / Family Health International Planned Funds:

Activity Narrative: - - -

This activity is deferred from FY 04 and contributes to increased access to—HIV/AIDS prevention services for high risk populations.

Corridors of Hope (COH) targets high risk men and women, including sex workers and their clients, truck drivers, mini bus drivers, and uniformed personnel, at border and high transit sites to reduce the transmission of HIV. These sites include Chawama, Chirundu, Livingstone, Kazungula, Kapiri Mposhi, Kasumbalesa, Ndola, Chipata, Katete, and Nakonde. Technical strategies include STI management, CT, referrals for ART, behavior change interventions that promote partner reduction and condom use, and condom social marketing. Services are provided at 10 service delivery sites and through outreach workers. FHI provides technical assistance and project management and monitoring, while World Vision manages the drop in centers and provides STI management and CT. Society for family Health implements behavior change interventions that promote STI treatment, CT, partner notification, adherence to treatment, and consistent condom use, along with positive living and reduction of stigma for PLWHAs. Proven communication methods are used such as peer education and outreach work, drama, one to one interpersonal counseling, group discussion, mass media and local-based promotional activities.

In FY 04, as part of the expansion to three new sites, CoH is implementing a Biologic and Behavioral Survellience Survey of high risk men and women at one of the 3 new sites and for the first time is including HIV prevelance as part of this survey.

Table 3.3.5: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Planned Funds:

CDC / Family Health International

**Activity Narrative:** 

The activity will result in improved STI management, HIV CT services, partner reduction promotion, and condoms for high-risk individuals and improved coordination between STI and HIV services, including cross-referral to antiretroviral treatment services.

Recognizing that recurrent and untreated sexually transmitted infections increase the risk of acquiring HIV, early and effective diagnosis and treatment of STIs is part of the national response of the Government of Zambia to reducing HIV transmission. Uniformed personnel and migrant and seasonal workers are at high risk of acquiring STI and HIV due to their high mobility which keep them away from their families for extended periods of time.

The USG, in collaboration with the GRZ, has evaluated the STI syndromic management guidelines in order to update the guidelines with respect to treatment of HIV-infected individuals and prevailing drug sensitivity patterns. The revision of the guidelines is being carried out in collaboration with the GRZ and other partners and the revised guidelines will be produced and made available at all levels of health care and in user-friendly formats such as pocket guides, charts and posters. Culturally appropriate messages on STI with an emphasis on the direct link with—HIV will be produced in collaboration with other partners. Post-test counseling will promote partner reduction and condom use for high-risk individuals.

In order to improve the quality of care for the Zambia Defense Forces and complement the GRZ program funded through the Global Fund, FHI will conduct training of health care workers in STI/HIV care. In order to ensure that training results in improved care, back up supplies of drugs for the diagnosis and treatment of STIs and HIV testing in these groups will be provided. A program to ensure the routine referral of STI clients for HIV counseling and testing will be developed for the tertiary reference facility in Lusaka, two districts in the Eastern province (Chipata and Katete) and among the migrant workers in the sugar cane plantation in Mazabuka district (Southern Province) and Kafue (Lusaka Province). Activities will be implemented also at the clinic level to address male norms and behaviors, and reduce HIV-related stigma and discrimination among migrant workers, the police, and members of the Defense Forces. We expect that among migrant and seasonal farm workers, the activity will be complementary to community mobilization efforts to be carried out by Agribusiness Zambia Sugar GDA (funded by USAID).

The programs under this Mechanism WILL include a focus on Abstinence and Being Faithful components, it is just that the focus is not exclusive; therefore the targets are not applicable as phrased. The Number of community outreach HIV/AIDS prevention programs will be 4 (districts). The number of high risk individuals who received targeted prevention services will be 800. The number of individuals reached with community outreach HIV/AIDS prevention programs will be 2500. The number of individuals trained to provide HIV/AIDS prevention programs will be 160.

Table 3.3.5: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: Social Marketing / Population Services International Planned Funds:

#### **Activity Narrative:**

Population Services International, through its local affiliate, Society for Family Health (SFH), will scale up support to discordant couples for cohesive, mutually-supportive B-C interventions; "Be faithful to one partner and avoid multiple sex partners"; and "Use Condems as the best existing barrier method pretection; against HIV/AIDS/STIs". Activities will be conducted through collaboration with NGOs working in care and support to identify discordant couples; coordination with public and private VCT centers to identify and reach group members; and work with post-test clubs to reach discordant couples and make partner reduction and condom use materials available.

SFH will also expand activities to target high risk groups at non border sites complementing and supplementing those locations covered by the Corridors of Hope project (see elsewhere in this section). Promotion of healthy practices and continued and consistent use of condoms by high HIV transmission sub-populations in non-border towns will be conducted through activities aimed at commercial sex workers and clients reached with partner reduction and condom use messages through outreach to bars, nightclubs, truck parks, work sites, hair salons, etc. SFH will engage primary male client groups (transport workers, uniformed personnel and police) in focused educational sessions on increased attainment of personal risk assessment skills; provide condom negotiation skill sessions for commercial sex workers; and identify referral facilities for VCT and STI diagnosis/treatment.

Fish camp traders, both men and women, in Western and Southern provinces, will be reached with partner reduction and condom use messages through outreach, drama, interpersonal communication with activities to understand barriers to condom use and fidelity among this group, increase personal risk assessment skills; and identify referral facilities for VCT and STI diagnosis/treatment.

SFH will engage in differential targeting of information, method and product promotion to high-risk group members and their families in rural and urban communities to help contain the spread of HIV/AIDS/STIs into the general population. Prevention and protection approaches focusing on HIV/AIDS/STIs risk reduction and "dual protection" among high risk couples/partners in marriages or long-term relationships will be developed and implemented.

These interventions will contribute to the establishment of revised male norms and behaviors within society in regards to HIV/AIDS. These new social norms will not only contribute to the decrease in risky sexual behavior among men but also will have a secondary effect on the risk behavior of women who traditionally in Zambia have less sexual negotiating power within the couple relationship, empowering them to strengthen their decision making capacity.

Table 3,3.5: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: CDC GAC / US Centers for Disease Control and Prevention Planned Funds:

**Activity Narrative:** 

The activity will result in improved STI management, HIV CT services, partner reduction promotion, and condoms for high-risk individuals and improved coordination between STI and HIV services, including cross-referral to antiretroviral treatment services. Provision of quality STI services for HIV-infected individuals depends on the availability of trained staff as well as appropriate and adequate drug supplies and testing facilities. The USG will provide drugs for the treatment of STI within the military and police health services in order to increase the availability of treatment for uniformed personnel and their families.

Seasonal and migrant workers in the sugar cane plantations are at particularly high risk of STI and HIV infection due to prolonged periods away from their families and increased economic resources during this time. The 2002 sentinel surveillance report indicates that the district from which most of the seasonal workers originate has very high rates of HIV and syphilis, though this is primarily a rural community. Migrant workers' families are thus at increased risk of HIV/AIDS on returning home. The USG will work with the sugar cane plantations to ensure that seasonal workers are provided with information about the link between STI and HIV and that appropriate management, including the referral to HIV counseling and testing is \_ provided. Post-test counseling will include appropriate referral to ART services.

The programs under this Mechanism WILL include a focus on Abstinence and Being Faithful components, it is just that the focus is not exclusive; therefore the targets are not applicable as phrased. The Number of community outreach HIV/AIDS prevention programs will be 4 (districts). The number of high risk individuals who received targeted prevention services will be 1,000. The number of individuals reached with community outreach HIV/AIDS prevention programs will be 10,000. The number of individuals trained to provide HIV/AIDS prevention programs will be zero, since this activity is paired with training activities in the FHI Other Prevention program area.

#### **Activity Narrative:**

The Health Communication Partnership (HCP) will tailor its high-risk group HIV prevention programs to provincially identified contexts and populations which will be targeted for partner reduction, mutual fidelity and the correct and consistent use of condoms. These will include uniformed personnel including police, taxi and missibus drivers, commercial sex workers, discordant couples, fishermen in Northern, Luapula and Southern Provinces, and transactional sex workers. HCP will collaborate and coordinate with other programs addressing these groups, including Corridors of Hope and the PSI Social Marketing program, to maximize coverage and avoid duplication of effort.

In implementing programs for these high-risk groups messages on condom use will be matched with information on in-depth behavior change and developing respectful gender equitable relationships between men and women. These activities will also be directed towards encouraging leadership within these groups, e.g., transport owners and head fishermen to serve as models of males taking responsibility to influence change of male norms and behaviors that undermine risk avoidance efforts. HIV stigma reduction and prevention of discrimination messages will be highlighted.

Peer education and outreach activities targeted to the high-risk groups and discordant couples. This will involve training peer educators from the leadership of these groups to facilitate behavior change activities. Communities will be encouraged to develop and implement Community Action Plans for HIV Prevention in targeted districts keeping the high-risk groups in focus.

"Tikambe" is an anti-stigma video in which two PLWHAs tell their stories and experience with stigma. Revision of the discussion guide to this video will be carried out to include messages for uniformed personnel and transport workers; distribution of videos and guides and airing of videos through mobile video units to promote wider dissemination of messages will also be promoted. Special attention will be given to development and adaptation of a peer education curriculum for mobile transport workers.

**Current Program Context:** 

The 2003 Zambia Sexual Behavior Survey revealed that only 9% of men and 9% of women knew their HIV status. With increased access to HiV/AIDS treatment and care programs, it is imperative that HIV positive persons are quickly identified and provided with health care services. In order to address the many barriers that preventpersons from accessing CT, the USG is committed to building upon its activities in FY04 by expanding awareness of the importance of CT; integrating CT into the public sector routine health services, and expanding CT services provided by NGOs/CBOs/FBOs in order to reach 250,000 people per year. As general background, in August 2000, the GRZ, in collaboration with NORAD, JICA, and the USG, formed the Voluntary Counseling and Testing Partnership to promote the benefits garnered from knowing one's HIV status. Currently, JICA and the GRZ provide HIV test kits, USG's implementing partners provide monitoring and evaluation technical support to the Partnership. and NORAD strengthens laboratory capacity and quality assurance mechanisms along with providing seed grants to CT sites. There are currently 250 CT sites in government and NGO-sponsored facilities. In 2003, 139,402 people received CT services nationwide (not including those tested in PMTCT programs); Congruent with government objectives and goals, most of the CT sites are in public health facilities. However, KfW and the USG are supporting the PSI/Society for Family Health (SFH) in scaling up private sector stand-alone clinics. There is clearly a need to integrate routine CT into clinical health services such as those for TB and STIs. The prevalence of HIV in newly : diagnosed TB patients in Lusaka is approximately 70%. A study in Lusaka showed that up to 50% of STI patients were HIV positive. CT in TB and STI clinics presents an opportunity to identify HIV positive individuals with greater efficiency than in the general population, opening opportunities for rapid expansion of ART and palliative care services. In Inth FY04, the USG strengthened its resolve to improve access to quality CT services within the public and NGO/CBO/FBO sectors in order to promote healthy behaviors and link persons needing treatment and care with organizations providing those life-extending services. More specifically, the Emergency Plan funding supported; training CT health facility staff in management information systems to properly monitor CT commodities; mobilizing communities to seek CT services and training PLWHAs to provide CT advocacy and prevention education; developing workplace programs to offer CT services and appropriate referrals; establishing 9 CT sites in the Konkola Copper Mines area; introducing CT into the 10 Corridors of Hope drop in centers; integrating CT. services into the TB and STI programs in the Livingstone and Lusaka Districts; and constructing a laboratory for the main military referral hospital in Lusaka to enhance CT services. With the CT results accomplished over the past year, the USG is well positioned to expand its commitment to CT as an essential component of a well-functioning national HIV/AIDS prevention, treatment and care program. Moreover, by increasing access to quality CT services within the public, military, and NGO/CBO/FBO sectors, such as through HIV test kit procurement and mobile CT clinics for hard-to-reach populations, and strengthening the referral network to treatment and care services, the USG will be well situated to achieve the overall objectives of averting 398,500 infections by 2010 and placing 120,000 receiving ART and 600,000 receiving care and support by 2008 as well as improving availability, access, and use of HIV CT, increasing public information and understanding of CT, and creating and expanding linkages between CT services and treatment and care facilities. The USG through DELIVER will purchase a portion of test kits to support national and Emergency Plan CT activities. \n

#### **Activity Narrative:**

In 2004, technical assistance to the ZDF in HIV counseling and testing centered primarily on capacitating medical personnel, social workers, and peer educators in understanding the pros/cons of HIV testing and developing counseling skills. The goal for 2005 is to take those developed skills and apply them to both establishing and strengthening the HIV counseling and testing services of the Zambian Defense Force to

reinforce counseling and testing as an essential component of military health assessments. Technical assistance for HIV testing services will be established at four ZDF hospitals, and HIV test kits will be provided to an additional six ZDF hospitals.

This activity will provide support to establish and/or improve counseling and testing services of the Zambian Defense Force (ZDF) to reinforce counseling and testing as an essential component of military health assessments. Technical assistance for HIV testing services will be established at four ZDF hospitals, and HIV test kits will be provided to an additional six ZDF hospitals.

Activities will include training, logistics, commodity procurement, materials development, development of linkages/referrals, local organization capacity development and a needs assessment. Resources would be used to establish HIV counseling and testing sites at military installations, procure test kits and equipment, train HIV peer educators and counselors on counseling and testing, develop linkage/referral networks to follow-up care, ART, and palliative care, to develop staff skills in program development and management of HIV counseling and testing, and to conduct an assessment of ZDF's needs for mobile VCT. In addition, educational materials promoting HIV prevention and CT will be refined and distributed to 69 ZDF health facilities.

The military is a high-risk group due to deployments in high-risk areas, mobility, and separations from families. VCT is an effective way of preventing HIV infection, but also an entry to treatment and care, thus impacting all of the Emergency Plan goals.

Program Area: Counseling and Testing Budget Code: (HVCT) Program Area Code: 06 Table 3.3.9: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: Prevention, Care and Treatment Project / Family Health International Planned Funds:

#### **Activity Narrative:**

The Family Health International Prevention, Care and Treatment (PCT) Project will support the Zambian Government (GRZ) to strengthen and expand HIV/AIDS counseling and testing services in five provinces: Central, Copperbett, Luapula, Northern, and Northwestern. The PCT team will improve the quality of existing counseling and testing sites, and increase access by establishing new CT sites in the public and NGO/CBO/FBO sectors. The PCT team, working with the GRZ; will provide CT services to 247,900 people in FY05.

PCT and its partners—Churches Health Association of Zambia (CHAZ), International AIDS Alliance, Expanded Church Response (ECR), Kara Counseling Training and Trust (KCTT), and Management Sciences for Health (MSH)—will provide technical assistance to public and NGO/CBO/FBO facilities to expand the national CT program as well as coordinate with other partners in educating communities on the benefits of receiving CT. The expanded CT program will target people in clinical settings and those who self refer to stand-alone and mobile CT—clinics as well as within communities through the use of lay counselors.

At the national level, the PCT team will provide technical assistance to the national HIV/AIDS Counseling and Testing Partnership to: develop and implement strategies for scaling up CT services; review/revise/disseminate national CT training materials, policies and guidelines; conduct CT trainings; strengthen the continuum of care and referral systems via integration of CT within other health care services and community programs; and establish CT quality assurance and monitoring programs.

At the provincial and district levels, PCT will support expanded quantity and quality of CT services in a variety of settings by:1) rapidly expanding testing facilities at clinic sites and community programs (e.g. TB and STI clinics, medical and outpatient clinics, home care programs, and in post-exposure situations); 2) expanding CT services linked to antenatal services and expanding CT in sites that focus on pregnant women; 3) strengthening free-standing and integrated sites that reach youth; 4) reaching out to most at-risk populations through peers and lay counselors with such innovations as mobile counseling teams.

Male involvement in CT services will be increased through establishing male-friendly CT services in MCH and integrated settings, recruiting male counselors, strengthening CT in STI clinics, increasing access to CT for discordant couples, and promoting CT in male-friendly venues.

Linkages and referral systems within the health care system and communities will be strengthened by training 208 persons to implement quality CT services and referrals in 40 sites. This training will consist of improving client-centered counseling skills with cross-training between TB, STI, and MCH services to ensure that health care providers refer clients appropriately for CT.

At the community level, NGO/CBO/FBO partners will contribute to increased CT services through training lay counselors and peer educators to participate in counseling and testing services. PCT will facilitate the development and training of a cadre of counselors to work throughout the focus provinces to ensure quality assurance of CT services as well as proper monitoring, evaluation, and reporting procedures. In addition, PCT will implement a small grants program to provide funds to local groups for CT initiatives, including grants for training lay counselors and for youth mobilization activities. Moreover, the CT service delivery activities will coordinate closely with the Health Communications Project to ensure that the proper IEC materials are available for target populations.

#### **Activity Narrative:**

The Family Health International Prevention, Care and Treatment (PCT) Project will support the Zambian Government (GRZ) to strengthen and expand HIV/AIDS counseling and testing services in five provinces: Central, Copperbelt, Luapula, Northern, and Northwestern. The PCT team will improve the quality of existing counseling and testing sites, and increase access by establishing new CT sites in the public and NGO/CBO/FBO sectors. The PCT team, working with the GRZ, will provide CT services to 122,100 people in FY05 using Deferred FY04 funds for new-activities.

At the national level, the PCT team will provide technical assistance to the national HIV/AIDS Counseling and Testing Partnership to: develop and implement strategies for scaling up CT services, review/revise/disseminate national CT training materials, policies and guidelines; conduct CT trainings; strengthen the continuum of care and referral systems via integration of CT within other health care services and community programs; and establish CT quality assurance and monitoring programs.

At the provincial and district levels, PCT will support expanded quantity and quality of CT services in a variety of settings by:1) rapidly expanding testing facilities at clinic sites and community programs (e.g. TB and STI clinics, medical and outpatient clinics, home care programs; and in post-exposure situations); 2)——expanding CT services linked to antenatal services and expanding CT in sites that focus on pregnant women; 3) strengthening free-standing and integrated sites that reach youth; 4)-reaching out to most at-risk populations through peers and lay counselors with such innovations as mobile counseling teams.

Male involvement in CT services will be increased through establishing male-friendly CT services in MCH and integrated settings, recruiting male counselors, strengthening CT in STI clinics, increasing access to CT for discordant couples, and promoting CT in male-friendly venues.

Linkages and referral systems within the health care system and communities will be strengthened by training 102 persons to implement quality CT services and referrals in 20 sites. This training will consist of improving client-centered counseling skills with cross-training between TB, STI, and MCH services to ensure that health care providers refer clients appropriately for CT.

At the community level, NGO/CBO/FBO partners will contribute to increased CT services through training lay counselors and peer educators to participate in counseling and testing services. PCT will facilitate the development and training of a cadre of counselors to work throughout the focus provinces to ensure quality assurance of CT services as well as proper monitoring, evaluation, and reporting procedures. In addition, PCT will implement a small grants program to provide funds to local groups for CT initiatives, including grants for training lay counselors and for youth mobilization activities. Moreover, the CT service delivery activities will coordinate closely with the Health Communications Project to ensure that the proper IEC materials are available for target populations.

**Current Program Context:** 

The National HIV/AIDS/STI/TB Strategic plan has identified the treatment of TB as a specific objective for the reduction of the socio-economic impact of HIV/AIDS in Zambia. Directly observed treatment (DOT) using either health workers or community treatment supporters to ensure compliance to treatment has been adopted by the GRZ for the implementation of TB services. With support from the Global Fund and other partners such as CIDA/Royal Netherlands TB Association, JICA and the USG, DOTS implementation has been implemented country wide. The USG is committed to building upon its FY04 activities to strengthen the services provided by the national TB program for TB in the HIV infected population through training and the provision of back up drugs and supplies. According to WHO and UNAIDS recommendations all patients presenting with tuberculosis in a country such as Zambia with a generalized HIV epidemic, should be referred for HIV counselling and testing as part of the diagnostic work-up. This approach enables the referral of the HIV infected TB patient for appropriate preventive treatment such as cotrimoxazole as well as for specific HIV care such as antiretroviral treatment. The Emergency Plan, since FY2004, has been developing and supporting such programs in the National TB program in the Southern Province. Specific activities included: the development of a systematic process that will allow routine access to HIV testing by patients diagnosed with TB, training new and existing TB staff on HIV counseling, testing, and referral to appropriate services, and ensuring the availability of laboratory equipment that will allow appropriate TB and HIV diagnosis and initiation of therapy. Such steps will continue in FY2005 by expanding these activities into other Provinces and districts, utilizing the lessons learnt from the initial sites in the Southern Province. With an estimated 31,546 HIV positive TB cases in Zambia in 2002, routine counselling and testing of all TB patients and development of links with the ART program has the potential to ensure that the targets for people on ART can be met. First level health care facilities in many districts are often housed in buildings that were not originally designed as clinics and are severely constrained in terms of ability to expand services to include routine counseling and testing.. The USG, in collaboration with the MOH, will enhance the capacity of health care facilities to provide counseling and testing through the construction and renovation of laboratory space and counseling facilities in selected centres included in the scale up program. An effective response to the TB/HIV epidemic will require a coordinated effort from both the TB and the HIV programs. This dual effort may be facilitated by the establishment of a national level TB/HIV Coordination Working Group, as recommended by the WHO. The USG will support the establishment of such a Working Group which will have the responsibility of coordinating and developing TB/HIV policy, resource mobilization and allocation, and establishing a coherent TB/HIV communication strategy. Community treatment supporters represent an important link between the health care system and the HIV-infected TB patient for ensuring adherence to treatment.—The USG will explore the utility of using community treatment supporters to facilitate HIV counseling and testing and increase the referral of TB patients for HIV/AIDS and TB treatment. The USG will provide support to the GRZ to develop a surveillance system for HIV infection among TB. patients that will inform the targeting of resources and the planning of activities for people living with HIV and TB, as well as monitor the effectiveness of the activities. The routine use of sputum samples to determine HIV status will be evaluated in the clinical settings that are providing counseling and testing for TB patients.

Program Area: Palliative Care: TB/HIV Budget Code: (HVTB) Program Area Code: 07 Table 3.3.7: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: CDC/HQ / Catholic Relief Services Planned Funds: The Churches Health Association of Zambia (CHAZ) provides health care to a **Activity Narrative:** significant proportion of the population in Zambia (70% of rural, 30% of urban). The USG recognizes that collaboration with CHAZ can significantly contribute to strengthening the capacity of health professionals and local organizations to care for HIV-infected TB patients. In FY04, CDC developed a facilitators' manual for the training of community TB treatment supporters. With USG support, CHAZ will enhance the role and involvement of community-level DOTS volunteers in supporting the treatment and management of HIV/TB. co-infected patients. Specific activities include CHAZ conducting a training of trainers' for 36 health workers. This will entail 2 trainers with health care experience from faith-based institutions in 18 districts (4 provinces) to be instructed in the presentation, management, control, prevention, and referral system of TB and HIV patients. These certified health workers trainers will then return to their local districts and facilities to train additional and existing community volunteers on these issues. This activity provides an innovative and cost-effective way to address severe health care human capacity shortages by multiplying skills and knowledge: through the population and further empowering community members to appropriately care for those that are affected by HIV and related illnesses. CHAZ, with USG support, will provide logistics support to community-based volunteers that act as treatment supporters for HIV/TB co-infected patients in four provinces (Southern, Western, Northwestern and Luapula provinces). These volunteers have been shown to increase treatment adherence during TB treatment by following-up with patients in the community to directly-observe the (HIV-infected) TB patient taking their medicines. In order to better retain and to create higher morale among these supporters, CHAZ will provide non-monetary support to them, i.e. bicycles for volunteer transport, t-shirts, workbags. CHAZ, with USG support, will also conduct monitoring and evaluation of the impact. that the above-mentioned community-based treatment volunteers have on the management, care, and outcomes of HIV/TB co-infected patients. Lessons learned from this evaluation will then be applied to similar programs in other areas of the country. **Activity Category** % of Funds ☑ Logistics 30%

#### **Activity Narrative:**

Established in 1964, the Zambian National TB program existed as a vertical structure within the Ministry of Health. From 2001, increased support for the TB program was made available from cooperating partners such as CDC GAP, the Royal Netherlands TB Association (KNCV) with funding from CIDA and DFID. Zambia was successful in obtaining funds from the Global Fund to strengthen the DOTS program in the first round. The funds requested included activities aimed at implementing TB/HIV activities within the country.

Currently DOTS has been implemented in all 72 districts of the country to varying extents, staff at health centre, district and provincial levels have been trained in TB control, including both clinical management and laboratory. Community participation has been promoted and resources are available for the community TB treatment supporters. Recording and reporting occurs and Zambia is reporting annually to WHO. In 2003 the reported treatment success rate was 83.4% for cases under the DOTS program and 71.3% under non-DOTS program. Failure rates were 2.1 and 4.7% respectively. The case detection rate was reported as 79%.

CDC has worked closely with the National TB program to strengthen the implementation of TB activities within the country. In 2004, the national program requested CDC to provide support to activities in the Southern and Western Province. In FY04, CDC provided support for the development of TB/HIV activities within the TB program in one district in the Southern Province. In FY05, these activities will be expanded to cover additional districts in 2 provinces, with the potential to expand to an additional province. Implementation of these activities is carried out in consultation with the national program. TB/HIV activities in other areas of the country are being implemented by other partners, again in consultation with the national program.

In order to streamline the implementation of TB/HIV activities, a national plan will be developed by a TB/HIV working group within the Ministry. CDC will support the functions of this committee with financial and technical support in FY05. This activity will strengthen the capacity of health professionals and local organizations to care for HIV-infected TB patients.

In this activity, the USG will work closely with WHO and the Ministry of Health to strengthen the delivery of integrated TB/HIV services at the community level in 3 districts in Southern (Mazabuka, Siavonga, and Monze), 2 districts (Mongu and Senanga) in Western provinces and 2 districts in the Eastern Province (Katete and Chipatta). The participation of community volunteers in the identification of suspects and provision of basic health care to patients plays a vital role in Zambia given the limited number of trained health care personnel. To supplement the efforts of health workers in order to integrate the TB/HIV/STI at community level, WHO in collaboration with USG and MOH, will train 144 local and community based treatment supporters to give appropriate referral of TB patients to the next levels of health care. These community volunteers will also be trained in:

- Case presentation of TB/HIV/STI,
- Basic management,
- Recording and reporting,
- · Who is to be referred? When and How?

CDC and WHO will conduct quarterly supportive supervision to the community volunteers in the 5 districts. On the spot teaching and solving of problems will bedone during these visits.

In addition, health workers at TB sites will be trained in HIV counseling and testing (for details see CT description for WHO).

#### **Activity Narrative:**

The activity will improve the quality of care available for HIV-infected TB patients and strengthen national capacity to provide integrated TB/HIV care.

The USG, is committed to providing quality, evidence-based palliative care to TB/HIV co-infected individuals and will work to improve the quality and quantity of care provided to these patients. Through collaboration with the National TB program, the USG Initiative will support activities in FY 05 to improve and increase access to HIV testing and counseling services for patients with TB, improve diagnostics and treatment of TB among HIV-infected, strengthen delivery of integrated HIV and TB services, and enhance the capacity for health professionals, local organizations, and community members to care for HIV-infected TB patients. With an estimated 70% of TB patients co-infected, the integration of TB and HIV activities is an appropriate response and is essential to achieving the goals of the Emergency Plan.

Specific TB/HIV activities and outputs that will be supported by the FY 05 USG initiative are described below.

In order to improve and increase availability and access to HIV testing and counseling services for TB patients, HHS/CDC will continue to utilize their technical expertise and collaborative relationship with the Zambian Ministry of Health to establish routine HIV testing of TB patients diagnosed in the TB program beginning initially in 3 health facilities in the Southern Province. Specific activities include developing standardized guidelines and policies for such routine HIV testing in Livingstone District that will be implemented, evaluated, and then expanded to 5 additional districts. Integration of TB and HIV services will also be strengthened through the development and implementation of a standardized patient referral and follow-up system that will link TB and HIV co-infected patients to an appropriate continuum of care, including antiretroviral treatment (ART).

To improve care and outcomes for HIV/TB co-infected patients, quality diagnostic capability must be established. The USG, in collaboration with the Zambian Ministry of Health, will support such activities by procuring and distributing treatment and diagnostic equipment such as HIV test kits, drugs, and equipment to measure the immuno competence level of TB/HIV co-infected patients for five districts. This will ensure that TB/HIV infected patients are quickly and accurately diagnosed, screened and referred for care and treatment such as ART.

To complement the diagnostic infrastructure enhancement, the USG will support activities to train health care workers in two provinces (18 districts) in HIV/T8 patient management, which can be complex. This training will include structured training classes, regular site visits, and quarterly evaluation by HHS/CDC and Ministry of Health personnel that will be supported by the USG:

The USG will also support the establishment of a National level TB/HIV Working Group within the Ministry of Health. The formation of this Working Group, to be comprised of TB, HIV, FBO, NGO, and community representatives, is recommended as a way to most effectively coordinate activities between the national TB and HIV programs. This Working Group will be tasked with developing and implementing a single, coherent TB/HIV strategy, policy, and communication message based on the best existing evidence. The USG will provide technical and financial support for the Working group to carry out their activities.

The USG, working with the Ministry of Health, will develop a system for surveillance of HIV prevalence among TB patients within the National TB program. In this activity, policy and guide lines will be developed with National HIV/AIDS control programs, to systematically monitor the national and regional prevalence of HIV in TB patients nationally. Targeted evaluation on the routine use of sputum samples to determine HIV status will be among the activities in this surveillance.

|------------------------------------|----|

**Current Program Context:** 

Several components of palliative care are mentioned in the National HIV/AIDS/-STI/TB Strategic Plan, including strengthening of hospice and Home-Based Care (HBC), encouraging positive living, good nutrition, and prevention and treatment of opportunistic infection. NAC and UNAIDS have Technical Working Groups on HBC. The MOH has developed standard HBC kits for clients and for providers and a HBC training manual for health care providers. Kits include a small supply of Septrim antibiotics. Though there are numerous organizations providing HBC at the community level, the GRZ does not yet have a central database on HBC. HBC and the hospice movement have long histories in Zambia. These programs, mostly through FBOs, provide psychosocial and spiritual support, simple nursing care, livelihood training, and in some cases nutritional supplementation. The Global Fund supports the Churches Health Association of Zambia (CHAZ) and ZNAN as their lead recipient in HBC and hospice care. The World Bank supports community-based palliative care and HBC kits for caregivers and patients. The World Food Programme provides high energy protein supplements for PLWHAs, including ART patients at CIDRZ program sites to increase ART adherence. The Development Corporation of Ireland supports church responses in the Copperbelt and Northern provinces, while the Netherlands is funding NCOs to do I iBC through ZNAN. Germany supports livelihood activities for PLWHAs in the Southern Region. U.S. NGOs such as CARE, CRS, World Vision, and PCI have been active in community-oriented HBC. Yet, in Zambia little attention has been paid to developing true palliative care services. For example, pain relief is missing from all HIV/AIDS palliative care services regardless of service delivery site, even hospitals. Few palliative care programs link patients to clinical care or ART services. However, recently the Palliative Care Association of Zambia was formed through its association with the African Palliative Care Association and a number of the Zambian health professionals received training in state-of-the-art palliative care. \n\nThe USG is the largest donor for Palliative Care in Zambia. Currently, the USG funds home-based, hospice and clinical palliative care including: (a) HBC through four Catholic Dioceses and the new RAPIDS award that expands HBC nationwide; (b), block grants to 10 Zambian Hospices; (c), nutritional supplementation, (d). a guidebook for HBC care givers; (e): three Family Support Units (FSUs) for Children Living with HIV/AIDS (CLWHAs) that provide counseling, educational assistance, play therapy, positive living clubs for children, and referrals for pediatric ART; (f). the integration of palliative care into HIV/AIDS workplace policies and programs; (g). Palliative care training in 5 military hospitals serving 9 provinces, including training 250 home caregivers and 10 new home care trainers; and (h) procurement of palliative care packages for military AIDS patients. The Emergency Plan in Zambia provides sub-grants to local FBOs/CBOs to expand and improve HBC, hospice care, and referrals to clinical services. To meet the urgent need for pain management among AIDS patients, the Emergency Plan is advocating for regulatory reform to increase access to effective pain management drugs. For FY 05, the USG will continue to improve the quality of palliative care services in Zambia through establishing national standards, training, twinning with regional palliative care expert institutions, improving the supply of pain relief, OI drugs and HBC Kits, increasing use of life extending interventions such as cotrimoxizole and izoniazed presumptive treatment, ITN bednets for malaria prevention, chlorine for safe drinking water, micronutrients, strong referral networks, and linking clients to food aid and livelihoods programs. The USG will establish an effective network of services linking palliative care with CT, PMTCT, TB and STI treatment, and ART.

Program Area: Palliative Care: Basic health care and support

Budget Code: (HBHC)
Program Area Code: 08

Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: RAPIDS / World Vision International Planned Funds:

**Activity Narrative:** 

This activity contributes to an improved capacity of community-based groups to provide quality home-based services to PLWHAs and to strengthening referral networks and linkages between palliative care and other services.

The RAPIDS consortium, led by World Vision, is comprised of CRS, Africare, Salvation Army and the Expanded Church Response with M&E technical support from Horizons. RAPIDS will provide a basic package of high quality community based Palliative care to approximately 60,000 PLWHAs, including local police and their families, in 44 districts of Zambia through community-based volunteers and nurse supervisors. RAPIDS will coordinate with NAC, CRS SUCCESS, CRAIDS, and Global Fund recipients CHAZ and ZNAN to avoid any duplication and to share best practices.

RAPIDS will provide commodities that support evidence-based basic care interventions including home-based care kits, chlorine for safe drinking water, cotrimoxizole, TB presumptive treatment, insecticide treated bednets, treatment of OI and pain relief. Palliative care in the home will also focus on psychosocial support, legal assistance for wills and property rights, nutritional supplementation through links to title II food aid and the World Food Programme; and local High-Energy Protein Supplements, and basic nursing care. Home-based care will be linked to a strong referral network for CT, clinical Care, and ART services and community mobilization that supports health seeking behavior and reduced stigma and discrimination of PLWHAs. Over 35 FBOs/CBOs will be provided with sub-grants and capacity building for quality community-based palliative care.

As a follow on from track 1.5, RAPIDS will continue support to Family Support Units at UTH, Ndola and Livingstone for children living with HIV/AIDS and link with CDC Pediatric ART activities.

This program will ensure that women are provided equal access to care and that men share the burden of care for HBC patients.

SUCCESS / Catholic Relief Services

Planned Funds:

**Activity Narrative:** 

This activity will contribute to strengthening the capacity of community-based groups to provide quality home-based services to PLWHAs and improving the quality of basic health care for HIV positive patients as well as establishing training courses and skill-based training in palliative care.

The CRS SUCCESS Project will continue to provide human resources and build local capacity for comprehensive, high quality palliative care through a network of FBO run home-based care programs and hospices in 6 provinces throughout the country. SUCCESS will continue and expand their home-based care program in the original 4 Dioceses in Western, Northwestern, Luapula, and Northern provinces and add programs with an additional 3 diocese in Southern, Eastern, and the other half of Northern province avoiding areas where RAPIDS implements its programs. SUCCESS will serve all members of the communities regardless of religion, and will serve the police and their families residing in these communities. Home-based Care will be provided by community-based volunteer care-givers who will be trained, supervised and supported to ensure quality of care... SUCCESS will ensure. equal access to palliative care for women and men and increase men's burden in care giving for the ill. The service package includes medical care and clinic referrals as needed, nutritional counseling and targeted nutrition supplements, psycho-social support, VCT, and linkages to other CRS and diocese HIV/AIDS programs, e.g. OVCs and ART. Patients will be referred to a mission hospital for ARVs, in particular but not limited to CRS AIDSRelief ART point of service hospitals. HBC kits will be provided to caregivers and will include items for service delivery, as well as protective gear (gloves and aprons). CRS SUGCESS will provide block grants to 10 hospices run by FBOs in 7 districts and training to numerous hospices around the country in partnership with the Zambia Palliative Care Association. SUCCESS will collaborate with Food for Peace recipients and World Food Program to access food aid for needy HBC clients.

SUCCESS will work with the American International Health Alliance (AIHA) to support Twinning between the Zambia Palliative Care Association and regional palliative care premier institutions such as the African Palliative Care Association (University of Cape Town, Sun Gardens Hospice in Pretoria, Hospice Uganda, Zimbabwe home based care) to provide mentoring, training human resources, develop palliative care courses and training programs, and facilitate technical information sharing.

SUCCESS will collaborate with other USG partners and share technical resources, in particular twinning resources, to improve home and hospice-based palliative care throughout the country, develop a National Palliative Care Policy and care guidelines to promote the use of life extending interventions such as co-trimoxizole, INT bednets, TB presumptive treatment, and increased access to pain management.

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005

12/13/2004

Page 162 of 306

Program Area: Palliative Care: Basic health care and support

Budget Code: (HBHC)
Program Area Code: 08

Table 3.3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: DOD / Project Concern International Planned Funds:

**Activity Narrative:** 

Palliative care desperately needs to be a strong, sustainable program in the Zambian Defense Force. Anti-retroviral therapy continues to be elusive to junior-ranking officers, and serves only as a VIP program. Palliative care would provide a continuum of care not only to military, but also to civilians, as the ZDF military clinics serve the entire population. At least 70% of the patients treated at military hospitals are civilians.

This agreement will focus on providing palliative care at four military installations, including medical care, treatment of opportunistic infections, pain management, psychosocial support, legal services, material support, nutrition and food supplementation, linkages to ART, malaria prevention, and the training of caregivers. Staff will be trained in topics such as pain management, support groups, and legal support. These activities will help improve the quality of home-based and hospice care, as well as develop service linkages to ensure a continuum of care. Technical assistance and training will be provided for the provisioning of palliative care through faith-based organizations, community groups, and NGOs.

Training on palliative care and HIV counseling and testing will also be provided to military chaplains and lay persons to strengthen pastoral couseling for HIV infected persons and families; to assist military chaplains in better promoting stigma reduction, HIV CT, acceptance of palliative care and HIV positive persons in sermons; and to establish military volunteer FBOs providing palliative care in homes to HIV positive military persons/families and strengthening of ties to civilian FBO organizations for palliative care services.

Finally, as a part of this activity, an HIV-positive police officer will visit at least ten military units to discuss HIV/AIDS diagnosis, prevention, care and treatment, counseling and testing, and entry into ARV therapy with members of the Zambian Defense Force. Our goal is to reach at least 500 to 1,200 ZDF personnel through this activity.

|   | aran Area Code: 08  a 3.6: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM  nanism/Prime Partner:  CDC GAC / US Centers for Disease Control and Prevention  Effective care and support for opportunistic HIV infections is an important element of HIV/AIDS care and support. Effective care and treatment requires the specific frectment to be ovalented as well as the infrastructure necessary to make the diagnosis.  The Zambia Defense Forces is recognized as one of the priority oppulations for HIV care as they are at increased risk of acquiring HIV due to the nature of their work, which often entails prolonged periods away from their families. Health care for the unflormed personnel is provided within specific military health facilities.  In 2004, the CDC provided support for the purchase of TB and STI drugs to supplement the supplies available in the Zambia Defense Forces health facilities. In 2005, the USG through CDC will continue to support the procurement of TB drugs and drugs for the treatment of 1200 opportunistic infections within the Zambia Defense Force facilities to supplement the available supplies. In 2005 CDC will provide technical and koigstes support to improve the diagnosis of opportunistic infections in two Provincial hospitals. **Activity Narrative:** 

With increasing availability of HIV testing there emerges the need to understand the complexities of palliative, psychological and social care. The Health Communication Partnership (HCP) will facilitate capacity building of health care and home-based care providers, NHCs, FBOs, CBOs, and NGOs in mobilizing. \( \) communities around care issues. HCP will work with other USG partners, national and international stakeholders, PLVHA networks, and FBOs, to review existing messages and materials, to reach consensus on care messages, and develop and ensure wider distribution of materials. HCP will also develop a nation-wide entertaining distance learning program to communicate standardized messages for PLWHA, their caregivers and support networks to reinforce positive living.

HCP, in collaboration with other USG implementing partners, will inspire and organize a nation-wide care and compassion movement with religious and traditional leaders spearheading the promotion of care and compassion for PLWHA and their families in their congregations and communities in addition to their role as models for changing norms around male responsibility and promoting respectful gender relationships between men and women. The religious and traditional leaders will be further encouraged to serve as role models to influence change in male norms and behaviors that undermine risk avoidance to health seeking efforts, and to promote HIV stigma and discrimination reduction. Neighborhood Health Committees will be given information and skills to enable them to include development of Community Action Plans for providing support for care and compassion activities in their communities.

Activities will include: mobilization of communities to develop and implement Community Action Plans to support HIV/AIDS care and compassion activities; consultative meetings with religious and traditional leaders and interfaith networks at national and provincial levels to actively participate in the nationwide care and compassion movement; message development and production of radio and TV spots on care and compassion with religious and traditional leaders serving as models; airing of the film "Tikambe" on ZNBC followed by televised discussion; training of health worker/CBO/FBO staff; message harmonization, reproduction and distribution of existing materials through FBOs, NGOs, District Health Management Teams, and PLWHA networks; development, pretesting, production and distribution of new messages and materials; consultation with existing PLWHA groups and key support organizations, message and program content development workshops, and production of radio scripts and listener guides for a Radio Distance Education program for PLWHA networks and their care givers; support to the 24-hour toll free HIV/AIDS Talk Line to create special sessions for dealing with issues concerning basic health care and support for PLWHA and their caregivers; technical assistance will be provided to an initiative to develop a feature length Zambian film on living in the world of HIV/AIDS with "living positively" and "care" messages.

|--------------------------------------|--|

**Current Program Context:** 

In 2001, the GRZ established a National OVC Steering Committee chaired by the Ministry of Youth, Sports, and Child Development (MYSCD) and comprised of 21 representatives from Government line ministries, Central Statistics Office, NAC, NGOs, UN agencies, traditional leaders, donors and FBOs. This body prepared an OVC Plan for 2003 - 2005 which is still awaiting political endorsement. Recently, the MYSCD has initiated a cabinet memorandum to domesticate the Conventions on the Rights of the Child (CRC), the first legislation in Zambia that would protect OVCs from physical and psychological abuse, sexual abuse, property grabbing and other rights violations. The Zambian Defense Force is especially hit hard by the AIDS epidemic with many military families taking on several children of AIDS deceased relatives. These military households are dependent on one bread winner and rarely can afford to eat three meals a day. Low military salaries and the high costs associated with school fees, book fees and uniforms allow families to send only one or two children to school. Currently, only two of the six refugee camps in the country have quality OVC services despite OVC exposure to abuse and neglect. Most support to OVCs in Zambia comes from non-government organizations. The 2004 OVC Situation Analysis identified 525 organizations that provide services to 280,000 OVCs in the country with little coordination and often competition among OVC service providers. Poor supervision and inadequate training of service providers compound the situation. In Zambia, churches provide the most coherent and organized institutional response to the orphan crisis, such as care, protection, shelter, food, spiritual counseling, psychosocial support, health, and education through children's homes, residential skills training centers, Sunday schools, Early Childhood Centres, Church Schools, outreach, mobile clinics and soup kitchens. There are a number of umbrella organizations that fund and build capacity of local OVC programs including Children in Need (CHIN) that guides more than 121 organizations, the LARC network of 92 NGOs in the Copperbelt; and numerous FBO networks. While the USG is by far the largest contributor to OVC support in Zambia, a number of other donors support OVC programs, including The Development Corporation of Ireland, DFID, UNICEF, SIDA, GTZ and the World Bank's CRAIDS project.\n\nSince March 2004, the USG has awarded one large local project, RAPIDS, and 3 centrally funded OVC projects for Zambia with six more expected by the end of October. The USG in collaboration with the MYSCD, UNICEF and DFID has just completed a National OVC Situation Analysis and a Regional Rapid Assessment, Analysis and Action Planning Process which includes a secondary analysis of DHS OVC data, a study of the impact of OVCs on the extended family, and a review of current OVC programs and responses. These documents will be used to guide OVC policy and programmatic decision-making and to track progress in OVC programming. The USG is rapidly scaling up support to OVCs throughout the country through FBOs, CBOs, schools, NGOs and linkages to food aid programs. OVC programs supported by the USG provide various combinations of psycho-social support, educational assistance, shelter, livelihood training, microfinance, health care, nutrition counseling and supplementation, legal support, succession planning, life skills, and training of caregivers. USG partners are integrating OVC support into all home-based and hospice care programs as well as military HIV/AIDS care programs and are working to standardize and improve OVC toolkits, the quality of OVC services, and build capacity of FBOs, CBOs, and NGOs to provide these services. The USG is working with the NAC and National OVC Steering Committee to finalize a national OVC policy and action plan, and to establish national M&E systems to track OVCs and map OVC services.

|--------------------------|----------------|--|
| Planned Funds:           |                |  |

#### Activity Narrative:

This activity will contribute to expanding orphan support programs nationwide, improving the quality of OVC support services and programs, and strengthening the capacity of national, provincial and district government coordinating structures in support of OVCs.

The RAPIDS consortium led by World Vision and in partnership with CRS, Africare, Salvation Army, and the Expanded Church Response will expand support to OVCs in 9 provinces. RAPIDS provides a unique opportunity for integrating home-based palliative care and OVC support. RAPIDS partners will provide care and support to 307,000 OVCs and their families, including police supporting OVCs, in 57 districts according to established standards of care, including psycho-social support, life skills and livelihood training, education assistance, referrals for health care. material support, shelter, nutrition counseling and linkages to food aid programs, and training of guardians and caregivers. This includes expanding RAPIDS to include the SCOPE-OVC Program activities in six districts (Livingstone, Lundazi, Lusaka, Masaiti, Monze, and Serenje) which will provide services to 30,000 OVCs. OVC services will be provided through a network of 9760 volunteer community based OVC caregivers who will receive training and supervision to ensure quality services. RAPIDS will build the capacity of national, district and community OVC committees and infrastructure. RAPIDS will link with Food for Peace recipients and World Food Programme to coordinate and leverage food aid for the benefit of OVCs and HBC clients in RAPID project areas.

Sub-grants totaling \$1.5M will be given to 100-300 FBOs/CBOs for innovative OVCs care project on the basis of recommendations from the community and district OVC committees and quality of proposals. RAPIDS will provide a leadership role in an OVC technical partnership group comprised of USG track 1.0 and 2.0 partners, GRZ and other donor partners to standardize OVC services and establish a national OVC support package and tool kit to be used throughout Zambia.

These activities will focus also on reducing HIV-related stigma and discrimination in the community.

Country Operational Plan Zambia FY 2005

Budget Code: (HKID) Program Area Code: 09 Table 3.3.8: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: Health Communication Partnership / Johns Hopkins University Center for Communic Planned Funds: **Activity Narrative:** As part of its program of building capacity in the districts and communities to promote home-based health care for PLWHA and their families, the Health Communication Partnership (HCP) will work with other USG partners to strengthen the technical capacity of NHCs; CBOs and FBOs in appreciating and managing the needs of QVCs. This will be done with the goal of promoting community participation in the welfare of OVCs and providing psychosocial support to guardians and caregivers through relevant communication activities. Production and distribution of IEC materials and tools to all OVC partners working in Zambia will be a key role of HCP. "Tikambe" is an anti-stigma video in which two PLWHA tell their stories and experience with stigma. Revision of the discussion guide to this video will be carried out to include messages for OVC care and support. Distribution of videos and guides and airing of videos through mobile video units to promote wider dissemination of messages will also be promoted at community levels. The PLWHA Radio Distance Education program (see Palliative Care—Basic Health Care and Support section) will also carry messages on OVCs and appropriate guardian and care giver behavior. Traditional and religious leaders, together with radio and TV spots, will discuss recommended practices in managing the needs of OVCs. OVC care and support will feature strongly in the activities of the nation wide care and compassion movement with emphases on preventing societal discrimination against OVCs and removing the stigma attached to them. In collaboration with District Health Management Teams, OVC Centers will be identified and provided with the required communication materials includingcompassion and care kits, the Building Blocks tool, the "Tikambe" film and users' guide, etc. and materials which provide information on psychosocial support, health and nutrition, economic strengthening, education and social inclusion. CBOs, FBOs and NGOs offering OVC care will also be provided with the materials and trained to use them. **Activity Category** % of Funds ☑ Community Mobilization/Participation 60% 40% ☑ Development of Network/Linkages/Referral Systems Targets: □ Not Applicable ☑ Not Applicable 0 Number of OVC programs ☑ Not Applicable Number of OVC served by OVC programs 0 ☑ Not Applicable O Number of providers/caretakers trained in caring for OVC **Target Populations:** Caregivers ☑ Faith-based organizations Religious/traditional leaders M Community leader Nongovernmental organizations/private Community members voluntary organizations Community-based Onphans and other organizations vuinerable children President's Emergency Plan for AIDS Relief

Total Funding for Program Area (\$)

**Current Program Context:** 

As of September 30, 2004, a total of 13,555 patients in Zambia were receiving ART (11,095 in the public sector and 2.460 in the private sector). The GRZ plans to expand ART to 100,000 persons by the end of 2005. The USG's goal is to contribute to putting at least 30,000 infected patients on ARVs by the end of 2005. Zambia now has 80 centers across the country providing ART: 2 referral hospitals, 9 provincial hospitals, 36 district/mission hospitals, 22 private clinics, 8 health centers in Lusaka, 1 mine hospital and 2 military hospitals. The GRZ has finalized the 2004-2005 Implementation Plan for Scaling Up Antiretroviral Treatment for HIV/AIDS. During 2004, the focus was on building systems, human capacity and infrastructure necessary for widespread delivery of ART. 2005 will focus on expanding the number of sites providing ART, making improvements to the quality of care and increasing uptake of ART. The scale-up plan includes public, private, and NGO/CBO/faith-based facilities, USG will help develop a certification system to assess capabilities of institutions to deliver ART according to national guidelines and standards. The USG, in partnership with GRZ, will continue to rapidly scale up ART services. The USG's partners have helped to develop national policies plans and guidelines necessary for the scale up of ARV services. To date, these have included the National HIVI AIDS Policy, the NAC Strategic Plan, ART Scale up Implementation Strategy, and a National Standard Training Package on ART and OI therapy. Technical assistance will continue to the national ART program and Technical Working Group for program planning, regular reviews and updating of national training materials, protocol development and dissemination. USG partners will further strengthen aspects of the health system that are needed to support ART, including drug management and logistics, information systems, human resource considerations, and cost sharing considerations. Assistance to points of service will help establish ART care, train health workers, equip as needed, provide monitoring and quality assurance as well as support linkages within facilities in order to integrate ART services with other clinical care services and between facilities to support the network model. In close collaboration with the Ministry of Health, the USG will formulate a strategic plan for ARV drug resistance monitoring as part of the provision of ART services in Zambia. An area of treatment that has not received much attention in Zambia is the availability of ART services for children. The USG will work closely with the University Teaching Hospital and MOH to create a center for outpatient pediatric and family HIV care. In addition, the USG will support efforts to institute pediatric and family HIV care units, including ART services, at 2-3 regional centers. This will serve as a core for a network of pediatric providers, and will build upon earlier USG investment in training some Zambian providers in pediatric ART as part of a regional effort. These central medical centers will demonstrate best practices; serve as an on-site training locale as well as a referral center for specialized or difficult cases. The USG will coordinate ART services with Neighborhood Health Committees, Community Support Groups and organizations to deliver health communication messages and strengthen community support for pediatric and adult ART, ART-adherence and disinhibition. Activities implemented by HCP will provide specific support in this area. With the establishment of ART services at most health centers providing PMTCT, a model that directly links women participating in the PMTCT program to the ART program and other HIV related services has been recommended in Zambia. Given the magnitude of the HIV epidemic in Zambia, the country ART program also receives funding from the Global Fund, World Bank, WHO, UN, SIDA, JICA, EU, DFID and other multi-lateral organizations and private institutions.

**Activity Narrative:** 

- Facility and central management systems;
- HIV/CT uptake and referral services;
- Laboratory services;
- ART monitoring and evaluation and linkage to palliative care services;
- Training clinicians in ART;
- Access and entry into ART;
- The management of opportunistic infections(OI);
- Of monitoring and evaluation;
- HIV/AIDS comprehensive services; and
- Clinical training in management of opportunistic infections.

This activity will create linkages between ART services and home-based care, with the goal of strengthening the ART service delivery sites, increasing the number of trained clinicians, and improving the care given to HIV-positive military personnel. In addition, equipment will be procured as needed for implementation of ART.

Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: CDC / Boston University
Planned Funds:

**Activity Narrative:** 

These activities will result in 1) increased accentance of ARV treatment; 2) strengthened infrastructure of ARV delivery system; and 3) strengthened human capacity to delivering ARV clinical care services.

Boston University, through its sub-partner and local NGO, the Zambia Exclusive Breast-feeding Services (ZEBS), will expand ART coverage for women and their partners in one large clinic of Lusaka (George Health clinic). ZEBS will work with George clinic staff in instituting and expanding these services for women and their partners. Currently, more than 1300 HIV+ women have been enrolled into the ZEBS services program and after 2 years of follow-up, 400 clients are in need of ART.

ZEBS, in partnership with GRZ, will implement this program in this clinic. Activities planned will include instituting and expanding the ART services, training and retraining health workers on all aspects of provision of ART services. In order for the George community to access these services, ZEBS will initiate a rigorous—awareness and community mobilization program in this very poor neighborhood of Lusaka. Activities will also focus on reducing HIV-related stigma and discrimination. As the provision of ART-services is complex, ZEBS will assist the clinic laboratory—in appropriate monitoring of patients on ART and will therefore establish a system that tracks progress of HIV+ patients accessing these services. ZEBS will also work closely with CIDRZ in establishing these services.

One of the biggest concerns for ART provision has always been issues of adherence and ZEBS will carry out an assessment of determinants of ART adherence 6 months after ART initiation in this well-characterized population. Results of this assessment will be built into strengthening the national ART programs.

.... - State Province: Lusaka ------

Program Area: HIV/AIDS Treatment/ARV Services
Budget Code: (HTXS)
Program Area Code: 11
Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: CDC / Columbia University Mailman School of Public Health
Planned Funds:

**Activity Narrative:** 

These activities will result in 1) strengthened infrastructure of ARV delivery system; 2) strengthened human capacity to delivering ARV clinical care services; and 3) increased number of patients on ART.

The USG will in partnership with the University Teaching Hospital (UTH) and through twinning with several US-based universities, led by Columbia University, establish an outpatient Pediatric and Family HIV Care Unit at the UTH pediatric department and at 2-3 regional hospitals in Zambia (Kitwe, Livingstone and/or Ndola). HIV/AIDS care services, including the provision of ART, have been traditionally seen as adult services leaving out the many children desperately needing these services. CDC plans to build a support unit for the outpatient Pediatric and Family HIV Care Unit at the UTH pediatric department and to refurbish an ART classroom at the UTH.

In order to implement this activity, Columbia University has been twinned with UTH.

Given the scope of the work involved, Columbia University (under the leadership of Dr. Etaine Abrams) will work and coordinate with the other universities and hospitals (Boston University, Emory University, Harlem Hospital, Tulane University, and University of Miami) in the establishment of the outpatient Pediatric and Family—HIV Care Units in FY05-06. Each of the above universities has prior experience working in Zambia and has a strong interest in contributing to the successful implementation of the Pediatric and Family HIV Care Units. Makerere University (Uganda) and Kigali Central Hospital (Rwanda) will also provide technical expertise in a South-South collaboration.

Through the twinning, UTH will train health workers from the participating institutions in pediatric and family HIV care and in ARV treatment—As a result of the capacity built in ART provision, ART services will also be integrated into existing outpatient maternal and child health services at these institutions. The management of ART and other infectious disease clinical services will be improved and strengthened leading to the development of appropriate and more specialized models of pediatric and family HIV care for the eventual distribution to other districts hospitals in Zambia. Other activities will include initiation of an HIV awareness program that will address issues of children and families living with HIV/AIDS, with counseling provided to parents/family members of children on the ART program. As the provision of ART services is complex, Columbia University, together with the CDC, will assist the hospital laboratories in appropriate monitoring of patients on ART and will therefore establish a system that tracks progress of HIV+ patients accessing these services.

Three targets of number of individuals (new, continuing x12 months, and total) receiving treatment at ART sites under this mechanism are 0, since this mechanisms is the Training component of an ART service delivery component funded under a different mechanism (where target for ART is 5,000).

#### **Activity Narrative:**

These activities will result in 1) increased acceptance of ARV treatment; 2) strengthened infrastructure of ARV delivery system; 3) strengthened human capacity to delivering ARV clinical care services; and 4) Strengthened ARV and OI drug management and logistics at national and regional levels to ensure a full and continuous supply at all ART sites.

The AIDS Relief Consortium (ARC) in Zambia will expand ART services in 8 hospitals participating in the AIDS Relief project and will target private and mission hospitals currently not covered by the MOH ART Scale Up Plan. The Consortium will initially work with 4 sites with a waiting list of registered patients and will further expand to the remaining 4 sites within the year.

The AIDS Relief Consortium, in partnership with GRZ, will implement this program in the identified mission hospitals and in one private institution. Activities planned will include instituting and expanding the ART services in these districts, training—and retraining health workers on all aspects of provision of ART services. In order for communities to access these services, ARC will initiate a rigorous awareness and community mobilization program that will not only address issues of stigma—and discrimination but will provoke people in these districts to seek HIV testing. As the provision of ART services is complex, ARC will assist the hospital laboratories in appropriate monitoring of patients on ART and will therefore establish a system that tracks progress of HIV+ patients assessing these services.

ARC has acknowledged that HIV/AIDS does not only affect people living in urbanareas and it therefore plans to provide ARVs to identified rural health areas that are not yet covered in the national plan. This will be done in collaboration with MOH.

**Activity Narrative:** 

These activities will result in 1) increased demand for and acceptance of ARV treatment 2) strengthened infrastructure of ARV delivery system 3) strengthened human capacity to delivering ARV clinical care services and 4) achievement of a full supply of related diagnostics, drugs and medical supplies. The Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) through its sub partner CIDRZ are implementing the Track 1.0 ART program in the Lusaka District. During 2004, the activities implemented mainly focused on building ART systems, infrastructure and human capacity necessary for the widespread delivery of ART. CIDRZ in collaboration with the GRZ were successful in in not only developing national ART policies, plans and guidelines, the ARV scale up implementation strategy plan but managed to provide ART services to more than 1200 HIV+ adults. CIDRZ in partnership with GRZ will continue to implement a rapid ART scale up in 3. provinces of Zambia. Activities planned will include instituting and expanding the ART services in these districts, training and retraining health workers on all aspects of provision of ART services. In order for communities to access these services, CIDRZ will initiate a rigorous awareness and community mobilization program that will not only address issues of stigma and discrimination but will provoke people in these districts to seek HIV testing. As the provision of ART services is complex, CIDRZ will assist the hospital laboratories in appropriate monitoring of patients on ART and will therefore establish a system that tracks progress of HIV+ patients assessing these services.

| Activity Narrative:                                | These activities will result in 1) increased acceptance of ARV treatment; 2) strengthened infrastructure of ARV delivery system; 3) strengthened human capacity to delivering ARV clinical care services; and 4) Strengthened ARV and OI drug management and logistics at national and regional levels to ensure a full and continuous supply at all ART sites  |
|  | The Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) through its sub partner CIDRZ are implementing the Track 1.0 ART program in the Lusaka District. Currently more than 3,000 HIV+ adults have accessed services at these clinics.  |
|  | CIDRZ, in partnership with GRZ, will implement a rapid ART scale up in 3 highly populated districts of Eastern province (Chipata, Katete and Petauke). Activities planned will include instituting and expanding the ART services in these districts, training and retraining health workers on all aspects of provision of ART services. Uniformed personnel, including the police, will also be targeted. In order for communities to access these services, CIDRZ will initiate a rigorous awareness and community mobilization program that will not only address issues of stigma and discrimination but will provoke people in these districts to seek HIV testing. As the provision of ART services is complex, CIDRZ will assist the hospital laboratories in appropriate monitoring of patients on ART and will therefore establish a system that tracks progress of HIV+ patients assessing these services. Activities will be expanded to other districts in Eastern Province during late FY05 and early FY06. |
| ·  | CIDRZ will also conduct a targeted evaluation to demonstrate the level of effectiveness of the ART program in Lusaka. A population – based sample survey for HIV+ adults receiving ART services is proposed to provide baseline measurements and to monitor changes in indicators like mortality, morbidity and food security and provide insight on the success of the program. Results from this evaluation will be used to strengthen the national program.  |

Using funding from COP 04, JHPIEGO assisted the GRZ in developing the ARV protocol and guidelines for the initial GRZ ART program. As part of the activities, JHPIEGO assisted the ART national program through putting together an ART program that trained doctors in all 9 provincial hospitals. With the advent of the Emergency Plan, it is necessary that JHPIEGO continues assisting the GRZ and the USG implementing partners in capacity building in the provision of this program. JHPIEGO will therefore provide a continuing level of focused technical assistance to MOH and the various clinical partners for human capacity development in the provision of ART services and will ensure that the work in ART implementation, OI management and training they began in COP 04 is extended and supported. They will also provide on-site support to a number of new ART As part of these activities, JHPIEGO will adapt materials that allow continual reinforcement and continuing education for the clinicians who have had basic ART training through the use of distance-learning approaches. **Activity Category** % of Funds ☑ Information, Education and Communication 20% 10%

Given the high incidence of child sexual abuse in recent years, UTH will develop, in partnership with Emory University and CDC, multi-disciplinary services including ARV and psychosocial support, for children who have recently been sexually abused. Most of these children are girls (median age = 7 years) and HIV seroconversion is, unfortunately, quite common. The UTH Department of Pediatrics is a referral center for childhood sexual abuse in Lusaka; 15-20 sexually abused children are seen each week. These children and their families need effective counseling and support, clinical services, and ongoing care in a child-friendly and parent-sensitive atmosphere. Prevention of HIV through the provision of post-exposure prophylaxis, and if needed ART, to sexually abused children in Lusaka District. **Activity Category** % of Funds ☑ Development of Network/Linkages/Referral Systems 30% Logistics 40% 図 Training 30% Targets: □ Not Applicable 1 ☐ Not Applicable Number of ART service outlets providing treatment ☐ Not Applicable 0 Number of current clients receiving continuous ART for more than 12 months at ART sites ☑ Not Applicable 0 Number of current clients receiving continuous ART for more than 12 months at PMTCT+ sites 25 . . ☐ Not Applicable Number of health workers trained, according to national and/or international standards, in the provision of treatment at ART sites ☑ Not Applicable Number of health workers trained, according to national and/or international standards, in the provision of treatment at PMTCT+ sites ☐ Not Applicable 800 Number of individuals receiving treatment at ART sites Not Applicable 0 Number of individuals receiving treatment at PMTCT+ sites Number of new individuals with advanced HIV infection receiving 0 ☐ Not Applicable treatment at ART sites ☑ Not Applicable Number of new individuals with advanced HIV infection receiving 0 treatment at PMTCT+ sites

**Activity Narrative:** 

This activity will contribute to increased numbers of HIV positive patients on ART.

The MoE is losing teachers and employees to AIDS at alarming rates. The Academy of Educational Development (AED) through its sub-partner the American Institutes of Research (AIR) will strengthen the existing HIV/AIDS workplace programs at MoE that reaches 55,000 MoE personnel to increase ARV uptake and adherence among teachers, MoE officials and support personnel by using a network model linking MoE employees to public and private ART services. AIR will assist the MoE in establishing activities that will support the uptake of ARVs and ARV adherence, including peer education programs, support groups, ART literacy, adherence support activities, psycho-social counseling, promotion of healthy living, and positive living with HIV/AIDS. Critical to the success of this activity will be the implementation of activities that will reduce stigma associated with HIV/AIDS and encourage those who are HIV positive to seek ART services. It is expected that 500 MoE personnel will be receiving ARVs in FY 05.

Program Area: HIV/AIDS Treatment/ARV Services **Budget Code: (HTXS)** Program Area Code: 11 Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: SHARE / John Snow Research and Training Institute Planned Funds: **Activity Narrative:** This activity will contribute to increased number of HIV positive patients on ART. The SHARE team will provide practical and technical support for the expansion of ART services in the workplace designed to complement the GRZ's growing efforts to roll out ART services. SHARE will provide ongoing technical assistance to 70; existing and new private and ministry workplace programs to ensure linkages to ART services as well as ARV adherence support. Building on the experience working with GRZ ministries, SHARE will develop similar strategies, systems and action plans for access to ART for the University of Zambia (UNZA) system. SHARE will train 100 managers in ART workplace policies and train 120 peer educators to encourage employees to seek out ART if HIV positive. SHARE will work with traditional leaders to create community support for those in need of ART to overcome stigma and other barriers to seek out ART services. SHARE will increase ART literacy among and provide tools for 200 traditional leaders to encourage adherence and stigma reduction within communities. This will be stimulated using a grantmaking mechanism along with technical support and guidance to organizations like the Royal Foundation. These activities are expected to ensure adherence of 4000 people on ARVs and 1000 new ARV clients. Building on the success of Track 1.5, two HIV/AIDS workplace Global Development Alliances in Zambia will be formed - one for Agribusiness and one for the extraction/mining companies. SHARE will provide a subgrant to the Comprehensive HIV/AIDS Management Program (CHAMP) to provide management, monitoring and technical support along with other SHARE partners

Alliances in Zambia will be formed – one for Agribusiness and one for the extraction/mining companies. SHARE will provide a subgrant to the Comprehensive HIV/AIDS Management Program (CHAMP) to provide management, monitoring and technical support along with other SHARE partners as the USG contribution to the GDA. Significant resources, both cash and kind, will be leveraged from the private partners: a) Working in the Eastern, Central, Southern, and Western Provinces, the Agribusiness GDA will be led by Dunavant Cotton with Zambia Sugar, two of the largest agribusinesses in Zambia. It is anticipated that the private partners of the GDA will contribute to this partnership; and b) based in the Copperbelt, the Northern and Northwestern Provinces, the Extraction GDA will be led by Konkola Copper Mines with Mopani Mines, Kansanshi Mines, and the Copperbelt Energy Corp. The anticipated contribution from the private partners of the GDA will be SHARE will expand ART literacy and community mobilization, link to the network of existing ART services, and where clinical services exist, e.g. Konkola Copper Mines, establish systems for a continuous supply of ARVs, increasing the number of people using ARVs by 300 persons in each GDA for a total of 600 persons.

In total 1600 new clients will go on ARVs and 4000 will be supported to continue ART.

Budget Code: (HTXS)
Program Area Code: 11
Table 3.3.11: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM
Mechanism/Prime Partner: CDC GAC / US Centers for Disease Central and Prevention

Activity Narrative:

Planned Funds:

These activities will result in 1) increased demand for and acceptance of ARV treatment; 2) strengthened infrastructure of ARV delivery system; 3) strengthened human capacity to delivering ARV clinical care services; and 4) achievement of a full supply of related diagnostics, drugs and medical supplies.

The USG will in partnership with the University Teaching Hospital (UTH) and through twinning with several US-based universities (led by Columbia University) establish an outpatient Pediatric and Family HIV Care Unit at the UTH pediatric department and at 2-3 regional hospitals in Zambia (Kitwe, Livingstone and/or Ndola). HIV/AIDS care services, including the provision of ART, have been traditionally seen as adult services leaving out the many children desperately needing these services. In order to strengthen the outpatient services provided to children living with HIV/AIDS and their families, the USG will renovate and expand an already existing structure within the pediatric department. Through this unit, the management of ART and other infectious disease services will be strengthened and will be used for the development of specialized models of care for pediatric HIV/AIDS in Zambia. These models of care will then be extended to 2 to 3 regional hospitals in Zambia.

The USG will renovate and expand existing structures contiguous to the Pediatric and Family HIV Care Unit at UTH in order to provide office space to co-locate key HHS/CDC staff next to the HIV clinical care services. This will greatly facilitate technical support for these programs and provide facilities also for training of clinical staff in provision of care to HIV-infected individuals.

Through twinning with Columbia University and several other US universities (Boston University, Emory University, Tulane University and University of Miami), the USG, in partnership with UTH, will train health workers from all participating institutions in Pediatric and Family HIV Care, including antiretroviral treatment. As a result of the capacity built in ART provision, ART services will also be integrated into existing outpatient maternal and child health services at these institutions. Other activities will include initiation of an HIV awareness program that will address issues of children and families tiving with HIV/AIDS, with counseling provided to parents/family members of children on the ART program. As the provision of ART services is complex, CDC will assist the hospital laboratories in appropriate monitoring of patients on ART and will therefore establish a system that tracks progress of HIV+ patients accessing these services.

In addition to the above activities, the USG, in response to a specific request from the Ministry of Health, will provide technical assistance to the national ART program in the surveillance of HIV-1 antiretroviral drug resistance mutations (especially for NNRTI). An expert consultancy will be planned by CDC, in close collaboration with the Ministry of Health, and appropriate activities (such as random sampling of recently infected HIV+ individuals for ARV drug resistance testing) will be instituted in FY05, based on the recommendations of this consultancy.

Planned Funds:

#### **Activity Narrative:**

Zambia faces an acute shortage of healthcare personnel which severely constrains the scale up of the country's ART program. With Track 1.5 funding, the USG supported an ART staffing survey in Zambia's eight major hospitals. It revealed that three of the hospitals have no laboratory technician, five are without pharmacists, two have no trained counselors for VCT and two have no appropriately skilled nurses. The number of full-time doctors (i.e. full-time equivalent) managing ART patients in these hospitals ranges from none to two – with each hospital having a catchment population of about 200,000 and a potential ART client base of over 2,000. In FY05, the USG plans to directly address the human resource constraint for ART through:

Providing Provincial Health Office Clinical Care Specialists: Ministry of Health (MOH) Clinical Care Specialists (CCS) in each of the country's nine Provincial Health Offices support service delivery for the major public health areas (malaria, maternal/child health, reproductive health and HIV/AIDS) in all provincial health \ facilities. In order to improve the oversight and support of HIV/AIDS services, the USG used FY04 funds to support the recruitment and placement of a second provincial Clinical Care Specialist for each Provincial Health Office who focuses exclusively on ART and other HIV/AIDS-related services. These are Zambian staff, employed by HSSP, and who are compensated on a par with their MOH colleagues. They provide technical and quality assurance support to district hospitals, health center and community HIV/AIDS programs and strengthen referral and continuity of care among health facilities in the province. Some of their specific activities include; working with the existing Clinical Care Specialist to coordinate scaling up of ART in hospitals and health centers; serving as a member of the provincial ART training team; conducting performance assessment for ART and other areas of HIV/AIDS service delivery; and providing technical support to private sector ART sites. Continued support of these supplemental staff is needed in FY05.

Supporting the Physician's Rural Retention Scheme: The MOH has an existing Rural Retention Scheme for physicians, which is the currently the only such scheme approved by Cabinet and the Public Service Commission for the health sector. Under the scheme, a package of allowances and incentives has been developed which is offered to physicians who serve a three-year contract in the most rural and underserved of Zambia's 72 districts. The MOH has prioritized Zambia's 72 districts according to level of hardship and will place physicians in districts falling into the two most severe categories (total of 54 districts). While a number of physicians have been placed through the scheme, the existing support from other donors and the GRZ is not sufficient to meet the need for physicians in these districts.

The lack of physicians in these areas is a major constraint to expanding ART and other HIV-related clinical services. Only physicians can prescribe ARVs and monitor ART. While the USG is assisting the GRZ to review and hopefully expand scopes of practice for other health workers, this is the current regulation, and no physician means no ability to provide ART. Also taking into account that more than 65% of clinical care in Zambia is HIV-related, these physicians will spend approximately 75% of their time providing ART and other HIV-related clinical services.

The USG will leverage GRZ and other donor contributions to this scheme to support an additional 30-35 physicians to serve in rural areas. The USG will support two parts of the retention package: a monthly hardship allowance of—\$200-250 (amount depends on hardship rating of district) and a one-time grant of up to \$3000 made directly to the district to be used to provide/upgrade adequate housing for the physician. Selection of candidates, decisions on district placement, levels of allowances and monitoring of participants will all be done by the MOH according to the approved procedures of the scheme. It is estimated that this will result in an additional 5,000 persons having access to ART who would otherwise have to travel prohibitive distances to receive this service.

Strengthen ART Accreditation Systems: While national treatment guidelines and

standardized training materials have been developed and are being disseminated around the country, the Ministry of Health and Medical Council of Zambia are anxious to further develop an accreditation system for ART services. This is particularly important for the private sector as there is no existing mechanism for government oversight of clinical care standards outside of the public sector. In addition, the GRZ is experimenting with systems to allow private sector providers to access public sector ARV supplies and they want to be sure these valuable drugs are being used properly. The UGG will assist in this effort, which will include building consensus on a set of requirements for providers (and possibly also facilities) that integrates training, continuing education, and other elements of quality service delivery; and development of a monitoring and evaluation system to maintain accreditation.

These activities do not directly impact individual patients. Therefore, the suggested indicators are not applicable.

Mechanism/Prime Partner:

Health Communication Partnership / Johns Hopkins University Center for Communic

Planned Funds:

**Activity Narrative:** 

As ARV treatment becomes increasingly available, there is great need for home-based care providers, PLWHAs and their families, Neighborhood Health Committees and FBO/NGO/CBO staff to have a solid understanding of the complexities and various issues around ARV treatment, and to be able to communicate this to others. The Health Communication Partnership (HCP) will support the MOH, National AIDS Council (NAC) and service delivery USG partners and NGOs in promoting wider acceptance and use of ARV services by PLWHA, their families and caregivers. Information on home management of ART and how to prevent disinhibition will be provided to PLWHA and family caregivers. MOH/NAC sites and community support groups will be identified and reached with information and materials to improve their service delivery. HCP will work with other USG partners, NGOs, PLWHA networks and FBOs to review existing messages and materials and to reach consensus on treatment messages. Messages will promote equal participation in ARV services by both men and women and also aim at reducing stigma and discrimination against PLWHA and their families.

Activities will include: mobilizing community members and groups to produce local drama demonstrating the need for acceptance and ways to support people on ART, including messages on adherence, management and disinhibition; installation of TVs and VCRs in service delivery sites for client viewing of information and education videos such as "Tikambe"; production and distribution of IEC materials for promoting pediatric and adult ART, ART adherence and disinhibition.

#### **Activity Narrative:**

The Family Health International Prevention, Care and Treatment (PCT) Project will support the Zambian Government (GRZ) to expand the availability of anti-retroviral therapy in five provinces: Central, Copperbelt, Luapula, Northern and Northwestern. Through strengthening of existing services and expanding to new facilities, PCT will place 8,040 new patients on ART in FY05.

At the national level, PCT and its partners—Churches Health Association of Zambia (CHAZ), Expanded Church Response (ECR), International HIV/AIDS Alliance (IHAA), Management Sciences for Health (MSH), and University of North Carolina at Chapel Hill (UNC)—will provide technical assistance to the national ART implementation task force and MOH ART managers to: continue to develop and implement strategies for scaling up ART services; review/revise/disserninate national training materials, guidelines, and protocols as needed; strengthen the continuum of care and referral systems via integration of ART with other health care services and community programs; and establish ART quality assurance and monitoring programs.

At the provincial and district levels, PCT will support expanded quantity and quality of ART services by training 54 clinical staff in ART management in 11 clinic sites as well as coordinate with community NGOs/CBOs/FBOs to educate persons on how to access these and other related services, such as the home-based care programs provided by the RAPIDS and SUCCESS projects. Ensuring equal access for women and men to ART is essential to scaling up ART services; therefore, PCT will identify barriers to women seeking and receiving ART and, based on results, develop strategies for reaching HIV+ women. Approaches include strengthening the referral linkage between ANC, PMTCT, and ART services as well as targeting communities' efforts that encourage women to seek CT and ART services.

The PCT team and its partners will also create a network referral system between the various health care facilities and community-based programs. Linkages will be established between the provincial and district AIDS health care services while broadening the ART continuum of care to include CT and palliative care services as well as incorporating TB; STI; MCH; general medicine; and pediatric services and community care and support programs into this overall network.

This referral network of ART services will be supported by system strengthening activities at the provincial and district levels, particularly in the areas of drug logistics management and health management information systems (HMIS). For drug logistics management, PCT is dependent on the GRZ medical stores and related logistics systems to ensure the availability of drugs and supplies at the facility level; therefore, PCT will coordinate with the Health Services and Systems Project to ensure that health facility management and pharmacy staffs are able to track, forecast, and order drugs and supplies. For strengthening the HMIS related to ART, PCT will coordinate with the MOH and other USG partners to ensure the implementation of this system at all project facilities. Laboratory support is also an essential; thus, PCT will work closely with GRZ facilities and USG partners to ensure that each facility has appropriate laboratory services in line with recommended standards of care.

The final component to ensuring availability of quality ART is community mobilization in which PCT will coordinate with existing community-based ART and palliative care partners to promote the use of these services. An example is that PCT will coordinate with the Health Communications Project to educate communities about ART, refer persons to ART services, and ensure community-level adherence counseling and support. Small grants will be dispersed to community groups, who are not already served by other partners, for activities related to stigma reduction and promotion of using ART services. This activity supports public sector service delivery. Therefore all commodities will be accessed from the public sector medical supply system. Under the Emergency Plan, the USG will procure ARVs and HIV test kits which will go into the public sector system and leverage additional procurements of these and other critical items, such as drugs to

treat opportunistic infections, and laboratory reagents, which are funded by other donors and the  $\mathsf{GRZ}$ .

#### **Activity Narrative:**

The Family Health International Prevention, Care and Treatment (PCT) Project will support the Zambian Government (GRZ) to expand the availability of anti-retroviral therapy in five provinces: Central, Copperbelt, Luapula, Northern and Northwestern. Through strengthening of existing services and expanding to new facilities, PCT will place 3,960 new patients on ART in FY05 using Defende FY04 funds for new FY05 activities.

At the national level, PC1 and its partners—Churches Health Association of Zambia (CHAZ), Expanded Church Response (ECR), International HIV/AIDS Alliance (IHAA), Management Sciences for Health (MSH), and University of North Carolina at Chapel Hill (UNC)—will provide technical assistance to the national ART implementation task force and MOH ART managers to: continue to develop and implement strategies for scaling up ART services; review/revise/disseminate national training materials, guidelines, and protocols as needed; strengthen the continuum of care and referral systems via integration of ART with other health care services and community programs; and establish ART quality accurance and monitoring programs.

At the provincial and district levels, PCT will support expanded quantity and quality of ART services by training 26 clinical staff in ART management in 6 clinic sites as well as coordinate with community NGOs/CBOs/FBOs to educate persons on how to access these and other related services, such as the home-based care programs provided by the RAPIDS and SUCCESS projects. Ensuring equal access for women and men to ART is essential to scaling up ART services; therefore, PCT will identify barriers to women seeking and receiving ART and, based on results, develop strategies for reaching HIV+ women. Approaches include strengthening the referral linkage between ANC, PMTCT, and ART services as well as targeting communities' efforts that encourage women to seek CT and ART services.

The PCT team and its partners will also create a network referral system between the various health care facilities and community-based programs. Linkages will be established between the provincial and district AIDS health care services while broadening the ART continuum of care to include CT and palliative care services as well as incorporating TB, STI, MCH, general medicine, and pediatric services and community care and support programs into this overall network.

This referral network of ART services will be supported by system strengthening activities at the provincial and district levels, particularly in the areas of drug logistics management and health management information systems (HMIS). For drug logistics management, PCT is dependent on the GRZ medical stores and related logistics systems to ensure the availability of drugs and supplies at the facility level; therefore, PCT will coordinate with the Health Services and Systems Project to ensure that health facility management and pharmacy staffs are able to track, forecast, and order drugs and supplies. For strengthening the HMIS related to ART, PCT will coordinate with the MOH and other USG partners to ensure the implementation of this system at all project facilities. Laboratory support is also an essential; thus, PCT will work closely with GRZ facilities and USG partners to ensure that each facility has appropriate laboratory services in line with recommended standards of care.

The final component to ensuring availability of quality ART is community mobilization in which PCT will coordinate with existing community-based ART and palliative care partners to promote the use of these services. An example is that PCT will coordinate with the Health Communications Project to educate communities about ART, refer persons to ART services, and ensure community-level adherence counseling and support. Small grants will be dispersed to community groups, who are not already served by other partners, for activities related to stigma reduction and promotion of using ART services.

#### Table 3.3.13: PROGRAM PLANNING OVERVIEW

Result 1:

Local health management information systems strengthened

Result 2:

Expanded use of quality program data for policy development and program management

Result 3:

Increased use of strategic information for surveillance of HIV/AIDS/STI

Result 4:

Improved national coordination in HIV/AIDS monitoring and evaluation

Result 6:

Improved human resource capacity for monitoring and evaluation

Current Program Context:
In Zambia, there are three interdependent service specific and because they have interdependent program area both because they are not service specific. Budget Code: (HVSI)
Program Area Code: 12

Table 3.3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: CDC / Central Board of Health Planned Funds:

**Activity Narrative:** 

The Cooperative Agreement (CoAg) with the MOH Central Board of Health supports strategic information results; local health management information systems strengthened and improved human resource capacity for monitoring and evaluation.

This activity seeks to improve patient care by ensuring that patient level data is better collected, stored, and more readily available, at points of care, to inform treatment decisions. In ensuring this, the USG will work with the Ministry of Health as the prime partner and will initially purchase equipment to raise the level of information and communications technology infrastructure. This infrastructure will be donated to the ministry and the funding mechanism will be used to distribute, install and maintain this equipment nationwide.

In addition, the USG is pioneering a 'Continuity of Care' project that will establish the development and implementation of a portable electronic medical record. For this task, this funding mechanism will be used for consensus building for a government-supported and endorsed Electronic Medical Record data elements standard, that will be essential in ensuring integration and data exchange between different partners' information systems, thereby facilitating continuity of care from one healthcare provider to another. In addition to improving the care for HIV patients across facilities, the Continuity of Care project will improve the timeliness, and therefore relevance of national data on HIV. Timely data will enhance the ability to make suitable management decisions and develop appropriate prevention messages.

For the Continuity of Care project, capacity building within the health information technology sector is required to ensure expanded human and skills capacity for effective and sustainable institutionalization of this key health service within the Ministry of Health. This funding mechanism will thus serve as a means by which training will be provided to existing employees on current trends of information systems in the health sector and in setting up information systems that meet Zambia's need for continuity of care. It will also allow for recruitment and salary costs of needed personnel to support this effort.

Finally, the USG will continue to support the integration of all currently operable and on-going clinical health systems development efforts with the government computerized Health Management Information System (HMIS). This will be made possible through support for revision of the HMIS automated database to enable auto-updates from EMR data records in place of tally sheets; and training of lead HMIS staff country-wide regarding the interface with continuity of care clinical information.

Program Area Code: 12 Table 3.3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: CDC/HQ / Elizabeth Claser Pediatric AIDS Foundation Planned Funds: **Activity Narrative:** The Centers for Disease Control and Prevention (CDC) has a working relationship with the Center for Infectious Disease Research in Zambia (CIDRZ). It supports the Strategic Information Results of Local health management information systems strengthened; Expanded use of quality program data for policy development and program management; Increased use of strategic information for surveillance of HIV/AIDS/STI, improved national coordination in HIV/AIDS monitoring and evaluation; and Improved human resource capacity for monitoring and evaluation. This proposed activity will develop a direct link between the Gates Foundationfunded Zambia Electronic Perinatal Record System (ZEPRS) electronic management tool and the more holistic USG 'continuity of care' system (see above) currently being developed for tracking patients receiving ART. CIDRZ has managed the Gates Foundation project and will be working closely with the USG to standardize data fields in line with national requirements. The USG-CIDRZ partnership will strengthen the local health management information system and promote national coordination of HIV/AIDS monitoring systems. The alliance will improve the quality of care for HIV positive patients, beginning in the Lusaka district. Patients are highly mobile between clinics: Patient data is often times incomplete preventing clinicians from providing optimal care for HIV-positive patients. Linking patient data between clinics Note: the number of persons trained is not the primary output of this activity, systems development is; but there will be a few people trained as part of this systems development. **Activity Category** % of Funds ☑ Strategic Information (M&E, IT, Reporting) 100% Targets: -- □ Not Applicable ☐ Not Applicable Number of individuals trained in strategic information (includes M&E, 8 surveillance, and/or HMIS) Target Populations: M Health Care Workers People living with HIV/AIDS Key Legislative Issues: Coverage Area: State Province: Lusaka ISO Code: ZM-09

President's Emergency Plan for AIDS Relief Country Operational Plan Zambia FY 2005 UNCLASSIFIED 2/13/2004

**Activity Narrative:** 

This activity will focus on the continuity of care project. This project is a collaborative effort between the USG (through HHS/CDC) and the MOH, Central Board of Health (CBOH), with support from JHPIEGO. The continuity of care project seeks to provide better clinical decision support at the points of service through the use of a portable Eelectronic mMedical rRecord (EMR).

The EMR will be implemented in a number of phases. The first phase will involve the implementation of the Continuity of Care amart card that will carry the Electronic Medical Records (EMR) for PMTCT clients in Lusaka. The USG CDC will work in collaboration with the Lusaka District Health Management Team (DHMT) and the currently operating Gates Foundation project (Zambia Electronic Perinatal Record System (ZEPRS)). 10,000 – 20,000 clients will be enrolled in the new system. The objective of the initial phase will be to observe the clients' card carrying behavior and levels of card acceptability.

The decision to begin the EMR in anter notal clinics offering PMTCT is to avoid stigmatizing the card. By providing the card to well patients, the card will not be associated with a particular disease, such as HIV. This is an important piececonsideration in promoting comfort with, and thefuture wide-spread use of the card. Zambian clients currently carry health information as booklets. It is expected that a move to a card will provide clients with a greater sense of privacy regarding their health information. It will also be a time to observe clinician electronic documentation practices. Adjustments will be made where necessary.

In this initial phase of the project, JHPIEGO will advocate to the Ministry of Health and clinic management staff to stress the importance of a system which promotes continuity of care for patients with HIV and HIV-related illnesses. Advocacy will include reduced data management workloads over paper systems, better patient care, simplified reporting, preserving data integrity, and improved management capabilities using more up to date data. Aggregated data which feeds into the Health Management Information System (HMIS) and relevant reports can be used for program improvements specifically in the areas of patient care, national care protocols and HIV care program management.

JHPIEGO will develop training materials and train clinicians, laboratory technicians and pharmacists in the use of the smart card in Lusaka clinics. They will also provide staff for quality assurance, to test the accuracy of the data entry via the EMR. This phase will provide a working prototype for providing quality PMTCT services across the country.

The second phase of this project will be the implementation of the continuity of care smart card using the EMR to support HIV care, anti-retroviral treatment and care for other opportunistic infections. Early sites will be in Lusaka in Collaboration with the Lusaka DHMT and the Centre for Infectious Diseases Research in Zambia (CIDRZ). The EMR will be rolled out in 3-5three to five District health clinics outside Lusaka. Target areas will be determined in conjunction with the MOH Ministry of Health such that the EMR works synergistically with other care and treatment projects. JHPIEGO will again be responsible for advocating the system to MOH Ministry and district partners, developing training materials, and educating medical staff in the use of the EMR.

The final phase of this project is to scale up enrollment in Lusaka and other sites by up to between 50,000 and 100,000 clients with integrated smart card EMR services covering HIV care, VCT, PMTCT, ART and opportunistic infections. JHPIEGO will advocate to DHMT staff on the benefits of using the EMR. They will train all HIV-related health personnel on the system use.

Budget Code: (HVSI) Program Area Code: 12 Table 3.3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: CDC / National AIDS Council, Zambia Planned Funds: **Activity Narrative:** The USG has a monitoring and evaluation strengthening cooperative agreement with National HIV/AIDS/STI/TB Council (NAC). It supports the following Strategic Information Results: local health management information systems strengtheneds expanded use of quality program data for policy development and program management; increased use of strategic information for surveillance of HIV/AIDS/STI: improved national coordination in HIV/AIDS monitoring and evaluation; and improved human resource capacity for monitoring and evaluation. NAC is responsible for managing all HIV/AIDS-related data for the country and to provide recommendations to all HIV/AIDS-related activities. To provide reliable information to the various ministries and civil society on approaches to prevention, care and treatment, NAC must be equipped with the most up to date HIV and related data. The agreement provides vital information and communications infrastructure to NAC. It pays for key strategic information staff positions; a director of monitoring, evaluation and research; and a management information systems specialist. It provides support to the NAC's Monitoring and Evaluation Technical Working Group for monthly meetings; development of the monitoring and evaluation (M&E) plan; and execution of the plan. The M&E plan is currently under development. A plan to train district health management teams in its execution is the next logical step. The USG provides on-going technical assistance to NAC on information and communications infrastructure planning, developing monitoring systems and sitting as an advisor on the NAC Monitoring and Evaluation Technical Working Group. The USG is discussing ways of advocating to NAC for the M&E agenda with the UNAIDS office in Zambia. The USG is also working closely with the DFiD advisor. and the M&E Technical Working Group on planning data collection, management use, and M&E support to the districts for HIV-related activities. **Activity Category** % of Funds Human Resources 45% Infrastructure 34% Strategic Information (M&E, IT, Reporting) 12%  $\square$ Training 9% Targets: ☐ Not Applicable ☐ Not Applicable Number of individuals trained in strategic information (includes M&E, 81 surveillance, and/or HMIS) **Target Populations:** Health Care Workers ☑ People living with HIV/AIDS

Table 3.3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

CDC / Tropical Diseases Research Centre

Planned Funds: -

Activity Narrative:

The co-operative agreement with the Tropical Diseases Research Centre (TDRÒ) was set up with the following primary objectives: expanded use of quality program data for policy development and program management; increased use of strategic information for surveillance of HIV/AIDS/STI; and improved human resource capacity for monitoring and evaluation.

In working towards achieving these goals, the USG will work with TDRC as the prime partner. This funding mechanism will initially be used to install a local area network that covers both floors of TDRC and thereafter the installation and support of a high speed permanent internet connection. As TDRC does not have any direct hires with information technology skills, this funding mechanism will also assist TDRC hire skilled personnel to maintain this infrastructure.

Once the information-communications technology (ICT) infrastructure and skills to manage it are in place, the co-operative agreement will be used to train researchers and clinicians in basic information technology skills, which will lead to the effective use of technology in research and surveillance.

TDRC uses the cooperative agreement to support HIV and HIV-related surveillance activities. Travel costs for oversight visits and commodity procurement will be used for the 2005-2006 anti-natal sentinel surveillance activities, which TDRC manages. This funding complements the CDC strategic information funding for essential testing kits and the analysis workshop. The sentinel surveillance is the only reliable trend data Zambia has of its HIV prevalence rates. The latest surveillance showed a national leveling off of the prevalence rates amongst pregnant women. The USG and the GRZ propose a biannual sentinel surveillance to follow more closely changes in trends: Educational messages will allow for focus in appropriate geographic areas and with relevant target audiences.

TDRC will determine the trends of the human simplex virus type II (HSV-2) in HIV positive antenatal mothers, counseling and testing clients, and STI patients. A 2001 study in Ndola Zambia found high correlation between HSV-2 presence and HIV-1 acquisition. Trend data will feed into sensitization messages on sexual behavior and HIV/STI prevention.

Program Area: Strategic Information Budget Code: (HVSI) Program Area Code: 12 Table 3.3.13: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: CDC GAC / US Centers for Disease Control and Prevention Planned Funds:

#### **Activity Narrative:**

The USG is providing technical assistance and information technology and communications (ITC) infrastructure to the MOH, the Central Statistical Office, a local faith-based organization, and laboratories. The USG, in collaboration with the US Census Bureau, the Central Statistical Office, University Teaching Hospital, Tropical Diseases Research Center, JICA, Swedish International Development Agency (SIDA), and National HIV/AIDS/STI/TB Council (NAC) is funding HIV surveillance activities.

This one funding mechanism will be used for six distinct activities all having substantial direct CDC involvement:

- 1) Technical infrastructure for supporting deployment of Electronic Medical Records (EMR) to provide improved Continuity of Care in selected locations;
- 2) ANC Sentinel Surveillance for ongoing monitoring of HIV trends;
- 3) Monitoring PMTCT and VCT service-based data for trend surveillance & improved facility-based decision support;
- 4) Pilut interface between Catholic Relief Services / Church's I lealth Association of Zambia (CRS/CHAZ) CareWare client software and Continuity of Care EMR system;
- 5) Laboratory External Quality Assurance initiative;
- 6) Sample Area Vital Registration and Verbal Autopsy (SAVVY).

These strategic information initiatives support the following Strategic Information Results:

- · Local health management information systems strengthened;
- Expanded use of quality program data for policy development and program management;
- Increased use of strategic information for surveillance of HIV/AIDS/STI;
- · Improved national coordination in HIV/AIDS monitoring and evaluation; and
- · Improved human resource capacity for monitoring and evaluation.
- 1) Technical infrastructure to support EMR to provide improved continuity of care: In response to the difficulties of tracking ART patients in Zambia, USG proposes to improve the continuity of patient care. Patients change clinics and so clinicians cannot access complete health records. This causes care to be sub-optimal, and will likely lead to early resistance to ART. To improve comprehensive HIV care and reduce induced costs due to premature utilization of second-line drugs, the MOH with USG support will implement a Continuity of Care initiative employing client carried 'smart cards' holding client's EMR. The USG will initially issue cards to 10-20,000 clients and carefully observe client card carrying behavior and acceptance issues, and make adjustments. The activities here complement the system revision, institutionalization and start up costs of training users and support staff, hiring temp staff during QA, rollout and heavy enrollment phases which are included in the JHPIEGO mechanism above; the Technical infrastructure activities here include direct support of 'smart cards', readers, computer equipment, printers, technical assistance, and other equipment and support for implementation. Also included is part of integration cost of writing interface to Zambia Electronic Perinatal Record System (ZEPRS), Center for Infectious Disease Research in Zambia (CIDRZ) and one or two other electronic client systems such as the Abt hospital ART system. (See Careware in 4) below.) Activities will begin at PMTCT sites in Lusaka in collaboration with Lusaka District Health Management Team and the Gates Foundation project: ZEPRS. After testing and adapting the technology, the Continuity of Care smart card will extend to include EMR services for HIV care, antiretroviral treatment and other Opportunistic Infection care sites in Lusaka, in collaboration with Lusaka District Health Management Team (LDHMT) and CIDRZ.

Phase two will move activities outside of Lusaka to implement the Continuity of Care smart card with EMR in 3-5 district health clinics outside Lusaka - locations chosen so that EMR works synergistically with other targeted activities, and other sites, to be determined in conjunction with GRZ. Integrated smart card EMR services in these locations would provide continuity between VCT, PMTCT, HIV, ART, and OI services, in addition to continuity over time. The project will be assessed on a continual basis to make allowance for these low infrastructure

locations (electricity, no telecommunications). Upon acceptance of design and demonstrated operations, Lusaka enrollment will be scaled up to 50-100,000 clients, with integrated smart card EMR services covering VCT, PMTCT, HIV, ART, and Ols.

2) ANC Sentinel Surveillance for ongoing monitoring of HIV trends: USG will also continue to work with the Tropical Diseases Research Center (TDRC), JICA, SIDA and MOH to conduct the AnteNatal Clinic (ANC) Sentinel Surveillance. The Sentinel Surveillance will include 24 ongoing sites plus 2 new refugee camps. The USG will support training clinicians and laboratory technicians handling samples and hold a data analysis workshop. Sentinel Surveillance activities under this mechanism will support the Deferred /CDC mechanism which will procure supplies & equipment for 2005-2006 Round of HIV Sentinel Surveillance. JICA and SIDA will provide funding for management oversight, travel, and quality assurance.

3) Limited site utilization of PMTCT and VCT data for trend surveillance & improved facility-based decision support:

As one of the 'New Strategies in HIV Surveillance' (discussed in Ethiopia February 2004), there is a prospect that HIV results from routine clinical care may be sufficiently benchmarked and complete, to reduce the frequency of need for traditional ANC Sentinel Surveillance. In the process of developing the software applications and planning for infrastructure needs, the USG will work with MOH, JHPIEGO, Catholic Relief Services (CRS) and the Churches Health Association of Zambia (CHAZ) to optimize local programs and surveillance of services information systems, in areas such as PMTCT & VCT. The collaborators will institute an ongoing service-based HIV Surveillance, taking advantage of new service-level information systems to generate a systematic surveillance approach with lower infrastructure requirements; develop local and real time 'model' feedback systems based on local services, demographics, risk profiles and intervention opportunities at the point of care; and locally train clinicians in use and interpretation of a feedback system.

4) Pilot interface between CRS/CHAZ CareWare client software and Continuity of Care EMR system:

USG will work with CRS and CHAZ to provide IT infrastructure needs assessment targeting in two faith-based organization hospitals and develop an IT plan for each site. The IT infrastructure needed for improved continuity of patient care will be installed in two district mission hospitals. The system will include an admission and discharge interface to inpatient services to help profile impact of HIV on services, in addition to the interface with CareWare for outpatient services captured in the EMR.

5) Laboratory External Quality Assurance initiative:
Laboratory quality control efforts will be reinforced by bringing an external quality assurance assessment and training team to Zambia. In collaboration with the national laboratories, they will support the introduction of laboratory management information systems that will encourage a quality assurance systematic feedback process in HIV and HIV-related testing.

6) Sample Area Vital Registration and Verbal Autopsy (SAVVY):
To ensure quality-national Vital Registration data, the USG Zambia will work with—
the United States Census Bureau and the Zambian Central Statistical Office (CSO)
to initiate a comprehensive Sample Area Vital Registration and Verbal Autopsy
(SAVVY) in 1-2 districts, to provide a sample population for baseline vital statistics
for Zambia. This activity will greatly enhance the ability of government to
understand the statistics surrounding HIV-related deaths in Zambia, and may be
very useful in prevention, care and treatment advocacy.

Total Funding for Program Area (\$):

**Current Program Context:** 

GRZ's plan to drastically scale-up ART nationwide requires support to systems, institutions, and programs that cut across prevention, treatment and care. USG partners strengthen HIV/AIDS service delivery systems, policies and coordinating structures to facilitate the rapid scale-up of HIV/AIDS civil and military services and programs. The public health system underpins HIV/AIDS service delivery and is overwhelmed by the epidemic. All health sector donors, including DFID, the Netherlands, Ireland AID, UNICEF, the World Bank and others, support health system strengthening. The USG provides complementary assistance to: annual and multi-year planning at national, provincial and district levels; training systems; human resource planning and management; performance assessment; sector financing; and donor and program coordination. \n\nZambia's human resource crisis is a major impediment to scaling up HIV/AIDS services. In addition to training and provision of staff, the USG works closely with the GRZ, the ZDF, the private sector and FBOs/CBOs to address human resource constraints, increase the number of service providers, and improve clinical skills. The USG, through Peace Corps, provides volunteers to local organizations involved in competing HIV/AIDS to enhance organizational and planning skills, assist in integration of prevention and care programs, and to develop and distribute effective outreach materials. The NAC requires support and strengthening as it struggles to manage 14 Technical Working Groups and support 9 Provincial and 72 District AIDS Task Forces which are still not fully operational. DFID has seconded 4 long-term consultants to work within NAC to facilitate planning, implementation, monitoring and evaluation at the national level, while the UNDP has placed UN volunteers in 20 District AIDS Task Forces. The USG team is actively involved in the HIV/AIDS Expanded Theme Group led by the Minister of Health and NAC technical working groups. The USG has worked with the NAC on drafting a National AIDS Policy and M&E framework, on HIV/AIDS financing, and has supplied NAC with communications and IT equipment. Support is also provided to the Ministry of Youth, Sport and Child Development, which oversees OVC activities. The USG is strengthening AIDS Task Forces, FBOs, NGOs, businesses and public ministries to implement HIV/AIDS services and activities inInThe USG continues to be the only donor providing support to the Zambian Defense Force (ZDF) in HIV/AIDS service delivery. Only 2 of the 69 ZDF health facilities have the capacity to implement comprehensive HIV/AIDS services, including CT and ART. Despite some training, clinical officers and nurses lack skills in prescribing and monitoring patients on ART and require continuing medical education. Procurement and distribution of STI, TB, OI drugs and test kits also continue to be problematic, with the ZDF consuming a month's supply of drugs within 10 days. Despite a strong effort to establish HIV/AIDS policies in the workplace, the vast majority of workplaces are still without any HIV/AIDS policy and few have comprehensive prevention, care and treatment programs. The World Bank funds 29 line ministries for HIV/AIDS workplace policies and prevention programs and DFID has also supported workplace efforts. The USG provides technical support to businesses, including two of Zambia's largest private sector. employers to expand CT, care, and ART services for employees and surrounding communities through public-private partnerships \n\nThough a number of Zambian leaders have spoken out against HIV/AIDS and are promoting AB and CT, these are few and far between. Zambia urgently needs to strengthen the role and commitment from a wide range of religious, political, traditional and HIV positive leaders. The USG works with Members of Parliament, faith-based networks, positive people's networks, and traditional leaders to change sexual and societal norms and behaviors and reduce stigma.

| Mechanism/Prime Partner:  CDC / Cliest Disease Laboratory  Planned Funds:  Activity Narrative:  This activity will result in the established of a national quality assurance program for laboratory services for HIV and related opportunistic infections.  Diagnosing the fising numbers of HIV-associated TB is especially challenging as the presentation of HIV-associated TB is characterized by a higher proportion of active 18 cases presenting with negative AFB (acid fast bacility) microscopy smears. This reduces the sensitivity of smear microscopy, which has been the traditional method for diagnosing pulmonary TB and leads to delays in diagnosis and freatment and poor outcomes of freatment. Improving the competence of laboratory staff occurs through training as well as continued evaluation of competence through the implementation of a quality assurance testing program.  The USG will continue with activities begun in 2004 to strengthen the capacity of the Chest Disease Laboratory to implement external quality assurance in provincial laboratories for the monitoring of TB in HIV infected patients and for the training of provincial lab staff to carry out quality assurance activities at district level. Program Area: Other/policy analysis and system strengthening

**Budget Code: (OHPS)** Program Area Code: 14

Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

SHARE / John Snow Research and Training Institute

Planned Funds:

**Activity Narrative:** 

This activity will contribute to (a) strengthening the capacity of national, district, community bodies to lead and coordinate the response to HIV/AIDS, (b) strengthening the capacity of faith-based, community-based organizations and local NGOs to administer, manage and implement HIV/AIDS projects; and 9c) making religious, political, traditional and positive people's leadership be the driving force in the fight against HIV/AIDS.

SHARE will expand efforts to provide financial and technical resources to innovative programs that inspire and strengthen national, district and community leadership in the fight against HIV/AIDS. SHARE will establish a leadership programs to support leaders, including traditional leaders, religious leaders, political leaders, and other influential individuals in the fight against HIV/AIDS. SHARE will provide sub-grants to local organizations, leaders and leadership groups to implement innovative advocacy activities that will strengthen the role of leaders (traditional, religious, political, positive people) in the fight to reduce stigma. ensure the legal rights of PLWHAs, and promote the use of HIV/AIDS services.

SHARE will provided technical support and capacity building to HIV/AIDS coordinating structures and key local stakeholder institutions and leaders, (e.g. 40 positive people's network groups, the National AIDS Council, Provincial, District and community AIDS Task forces, traditional, religious and political leadership, law enforcement and the judiciary, business associations), engaged in the fight against HIVIAIDS.

By working to change the policy environment, SHARE will help ensure that the large Emergency Plan investment has significant and lasting impact. SHARE will work closely with NAC to conduct forums at regional and district levels to seek consensus and develop shared responses to HIV/AIDS. SHARE will also work closely with national stakeholders to develop a policy matrix that monitors national and workplace policies. SHARE will assist in the drafting, refinement and dissemination of codified laws or regulations applicable to HIV/AIDS discrimination and that remove barriers to access/use of CT, care, and ART services. SHARE will train 400 people in the implementation of these new laws/regulations including law enforcement and the judiciary.

**Activity Narrative:** 

With these monies, the USG will address underlying issues that constrain human capacity development and deployment across multiple program areas.

To establish and maintain the network model, institutionalized, dependable communication is essential. Reliable communication is the foundation for timely disease monitoring. Currently population-based HIV disease surveillance in Zambia takes place once every five years. Improved communications will allow data to be collected and analyzed over shorter time intervals allowing local health management teams to respond promptly with appropriate prevention messages, or to respond promptly to development of ARV drug resistance. The USG will work with the MOH to improve isolated health care worker's access to a social and technical support system. The CDC is the prime partner but will purchase information and communication technology equipment on behalf of the MOH. The equipment will be donated and installed using this funding mechanism.

The equipment is a complement to improvements in health systems management which the USG and the Government of the Republic of Zambia (GRZ) are working to enhance. Rural and semi-urban clinics currently receive management visits relatively infrequently, causing a crucial lapse in timely oversight. Relatively isolated clinics will be electronically linked to outside information sources. The equipment-will help to improve communications between central, provincial and district management. Management can provide timely support to the field to improve patient care, health center management and clinical skills. An added benefit is that select rural and semi-urban locations will also be able to link into the national health information management system electronically. Provincial and national supervisors will have timely access to clinic records facilitating management feedback loops. Clinics will have greater access to user-friendly presentations of their data to promote internal improvement in quality of HIV care and facility administration. HIV/AIDS care and treatment will also be upgraded by providing clinicians with the most up to date patient managerifient tools, national treatment protocols and guidelines.

The USG will work with the MOH to provide a mobile IT classroom to improve computer skills amongst public sector employees. USG and MOH will identify appropriate trainers to school largely computer illiterate health care workers in basic computer skills suck as keyboarding, Office programs, and communications tools, resulting in an IT competence certification. Thereafter, health care workers will be able to access distance training courses for HIV, counseling and testing, PMTCT, tuberculosis and other HIV-related disease management certification.

Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM
Mechanism/Prime Partner: Health Systems and Services Program / Abt Associates
Planned Funds:

**Activity Narrative:** 

In FY05, the Health Services and Systems Project (HSSP) will build on FY04 activities to strengthen Zambia's public health systems that support HIV/AIDS services through:

Planning: HSSP will assist the Ministry of Health (MOH) in: drafting HiV/AIDS sections/chapters of the new National Health Strategic Plan (2006-2010); continuing (from FY04) revision of existing planning guidelines to reflect multiyear HIV/AIDS planning and coordination; continuing (from FY04) to build capacity of Provincial Health Offices for multi-year planning for HIV/AIDS; revising existing health facility performance assessment tools to include HIV/AIDS services; and developing reporting formats for monitoring the implementation of district and hospital Action Plans with special emphasis on HIV/AIDS services.

Training Systems: HSSP will assist the MOH to coordinate national HIV/AIDS training through: strengthening of HIV/AIDS modules in pre-service curricula for key health workers; and developing a national training information management system for HIV/AIDS-related in-service training.

Human Resources Planning and Management: HSSP will support the MOH to strengthen.HIV/AIDS human resource planning and management, including:\_\_\_\_\_\_\_developing a human resources plan for scaling-up of ART in the private and public sectors; developing a health sector human resource database in conjunction with DFID and other donors; reviewing existing mechanisms for recruiting, motivating and retaining health care providers in ART sites; and developing guidelines and regulations on contracting out ART services to private providers.

Financing: HSSP will support assistance to track health sector HIV/AIDS program budgets and the total resource envelope, including: revising health sector financial planning and monitoring tools (e.g. Joint Investment Plan, National Health Accounts, Financial and Administrative Monitoring system) to integrate and capture HIV/AIDS financial flows and expenditures; tracking HIV/AIDS funding to various levels (central, provincial, district, hospital, health center, community) of the health sector, and developing costing and financial analysis of HIV/AIDS program requirements. In addition, HSSP will facilitate policy refinements for ART cost sharing through development of systems for managing the use of ART cost sharing funds, strengthening Exemption Committees at all ART facilities and integrating exemptions into the Health Management Information System. Finally, the USG will work with the GRZ to develop a framework for an ART social security scheme.

Health Sector Coordination: HSSP will assist the MOH to appropriately coordinate HIV/AIDS activities and funding with the established system and structures of the sector through: conducting a stakeholder mapping of all partners in delivery of clinical HIV/AIDS services and reviewing clinical HIV/AIDS implementation framework to identify gaps.

Budget Code: (OHPS) Program Area Code: 14 Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM Mechanism/Prime Partner: Health Communication Partnership / Johns Hopkins University Center for Communic Planned Funds: The Health Communication Partnership (HCP) will support national and local Activity Narrative: leadership building for program advocacy, support and sustainability. The program will promote greater understanding of key strategic issues such as gender and , HIV/AIDS, promote sharing of best practices among communities and ~ organizations, and facilitate active involvement and participation of the media in program activities at the individual, community and national levels. Involvement of and patronage of high-level state officials at national, provincial, district and community levels will be pursued as a means of reinforcing communication and advocacy. Activities will include: training of local leaders in community mobilization and use of participatory tools in motivating and sustaining community participation; facilitation of exchange visits among communities where best practices will be shared and lessons learned; expansion of the 'Gender and Sexuality Tool Kit' into 5 additional districts. This is a guide that promotes a better understanding of gender roles and responsibilities and equitable treatment of men and women; small grants will be provided to CBOs engaged in HIV prevention, care and support activities in the communities to sustain their work; USG partners working in leadership will be supported with information and materials. High-level media campaigns and greater media coverage will be supported. **Activity Category** % of Funds ☑ Community Mobilization/Participation 30% ☑ Information, Education and Communication 70% Targets: ☐ Not Applicable →M·Not Applicable Number of HIV service outlets/programs provided with technical 0 assistance or implementing programs related to policy and/or capacity building, including stigma and discrimination reduction programs □ Not Applicable 3,500 Number of individuals trained in implementing programs related to policy and/or capacity building, including stigma and discrimination reduction programs Target Populations: Community leader Community members Community-based organizations ☑ Faith-based organizations Government workers Community health workers Media Policy makers Religious/traditional leaders President's Emergency Plan for AIDS Relief

Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner: / US Peace Corps
Planned Funds:

**Activity Narrative:** 

One of Peace Corps Africa Region's performance goals through 2007 is to significantly increase its role in responding to the global HIV/AIDS epidemic by expanding the number of Volunteers who will provide education, training, and upport for needy individuals, communities and organizations. The Region has established specific objectives, including the expansion of the ability of Volunteers and their communities to obtain and exchange information about the delivery of services to people living with HIV/AIDS, and increasing the number of partnerships targeting the HIV/AIDS efforts across the continent.

The Africa Region also expects each Post to incorporate HIV/AIDS training into either pre-service or in-service trainings so that 100 percent of all Volunteers are prepared to engage in HIV/AIDS education, prevention and support activities by 2007.

With 145 Volunteers presently in the country, Peace Corps/Zambia is one of the largest programs in Africa. These Volunteers are located in eight of Zambia's nine Provinces, and nearly all live and work in rural, hard to reach villages. As such; Peace Corps/Zambia fills a unique niche that positions it well to play an increasingly prominent role in meeting the goals set forth in the Strategic Plan.

Peace Corps/Zambia will continue to strengthen its relationships with the Department of State, USAID, DOD and CDC in making a meaningful contribution to reversing the HIVAIDS epidemic-in-Zambia.

Through Emergency Plan-funding Peace Corps/Zambia has developed a stand-alone project that will focus on HIV/AIDS. In early FY2005, Peace Corps will begin to utilize a series of six month Crisis Corps Volunteers who will live at the community and district level and provide support to both government and non-governmental agencies, including Faith Based Organizations. Ten Crisis Corps Volunteers will launch this program in FY2005. Peace Corps Zambia also plans to utilize up to ten "extension Volunteers" in FY2005 who will contribute to overall country USG capacity building programs, primarily at the district level. These are Volunteers that wish to extend their service for a year or more beyond their initial two-year commitment. Finally, in May 2005, twenty Trainees will arrive for an extensive training program that will lead to their placement as Volunteers in rural villages for two years.

These Volunteers will partner with organizations actively involved in combating the HIV/AIDS epidemic in order to enhance organizational and planning skills, assist in integration of HIV/AIDS prevention and care programs, and to develop and distribute effective outreach materials.

Collectively, these new projects will move Peace Corps Zambia from uncoordinated "voluntary" HIV/AIDS interventions to more focused and coordinated activities. Volunteer participation at both the district and village level will concentrate on the prevention component in the Emergency Plan's 2-7-10 targets to be achieved by 2008. Additionally, all Volunteers across every project throughout Zambia will monitor their HIV/AIDS efforts and will provide input into the EP Country Data Bank through a Data Collection system being developed by Peace Corps/Washington.

#### **Activity Narrative:**

In order to provide public sector HIV/AIDS clinical and community-based services, including ART, district health facilities must meet basic operating expenses such as utilities, rent, fuel, facility and vehicle maintenance, supplemental drug and medical supply purchases, etc. Without a consistent and reliable source of funding for these basic operational costs, district hospitals and health centers are not able to provide HIV services to the population. Lack of electricity, lack of transport to move people and supplies, lack of basic medical inputs like gloves and syringes—all of these can translate into clients arriving at health facilities, often after great time and expense to get there, to find the service they need is not available. With an estimated 65% of health services being HIV-related, and the fact that this percentage will grow as ART becomes part of the service in more and more sites, there is a direct effect on Emergency Plan results if these operational costs are not met.

In Zambia, support for operational costs is provided by designated resources from the GRZ and donors, which are combined to fund monthly grants to each of Zambia's 72 districts. The USG contributes through an existing Sector Program Assistance agreement with the Ministry of Finance and National Planning under which USG funds released through the program are leveraged to provide funding to the district health grant account. Monitoring of the district grant account is done quarterly through the Ministry of Health's Health Sector Committee, of Which the USG is a member. While the parameters of the Sector Program Assistance agreement do not require the USG to track individual USG funds past their being added to the Ministry of Health district grant account, the USG receives district financial and service delivery reports for all districts so is able to monitor use of funds from that account.

The Emergency Plan funds requested for this activity will be equally matched by other USG health funds to make up the full USG contribution.to.the district grants. The amount requested from the Emergency Plan is approximately 4% of the Ministry of Health's annual district grant total and approximately 1% of Zambia's FY05 Emergency Plan budget—a cost effective way of helping to make sure that HIV/AIDS services in the public sector are available to clients. This support represents the equivalent of supporting the operations of approximately 3 districts and 8 health facilities and would result in ART treatment for an estimated 14,560 additional patients. However, the USG will attribute this activity as part of the USG support for the national program and will count indirect national ART achievements.

President's Emergency Plan for AIDS Relief . Country Operational Plan Zambia FY 2005

UNCLASSIFIED 13/2004

Program Area: Other/policy analysis and system strengthening

Budget Code: (OHPS)
Program Area Code: 14

Table 3.3.14: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

MPH Training / US Agency for International Development

Planned Funds:
Activity Narrative:

Zambian health professionals delivering HIV/AIDS services and managing the delivery of HIV/AIDS services have had limited opportunity to gain the technical, public health management and analytical skills necessary to plan, implement; manage, monitor and evaluate programs. The USG, in consultation with the GRZ, has identified, as a priority, the need to develop these skills in order to scale-up, sustainable HIV/AIDS services; however, clinicians in Zambia do not receive this training as part of their medical or nursing education. Given the level of resources flowing into the country for HIV/AIDS and the challenges to analyze Zambia's needs and then effectively coordinate and use these resources to turn the tide of the epidemic—at national, provincial, district and facility levels—it is critical that these professionals have the opportunity to receive public health training that will help them do their jobs.

The USG has established relationships between the GRZ and the University of Zambia and the University of Pretoria in South Africa to provide funding for Zambian health workers to study for Masters in Public Health (MPH) degrees. The University of Pretoria MPH program offers specialized tracks of study and Zambian students will be directed to either the Monitoring and Evaluation or Disease Control track. Coursework in both programs includes HIV/AIDS and the necessary skills for disease prevention and control.

The USG will support 15 Zambian physicians and nurses at the University of Zambia (10 places) or the University of Pretoria (5 places) for an 18-month course. Emergency Plan funds will be matched 100% by other USG non-HIV/AIDS funds so each participant is equally funded by both sources. Participants will be selected jointly by the USG and a national fellowship committee to identify physician and nurse candidates who are either currently working in HIV/AIDS programs or slated to work in HIV/AIDS programs and will be best placed to fully utilize the skills and knowledge gained from this training. Participants are bonded to return to their jobs for a period of two years post-graduation. The USG's long-standing Participant Training program has established systems for following graduates to be sure that fulfill the requirements of their bonding and are working in areas directly related to their training—in this case, HIV/AIDS service delivery. As part of these routine Participant Training systems, the USG will develop a monitoring and evaluation component to demonstrate the linkage between MPH training and improved quality of HIV/AIDS services. The USG will develop instruments and processes to evaluate the impact of the MPH training on the graduates work once they return to their jobs.

**Current Program Context:** 

The USG in Zambia is a strong and diverse team that capitalizes on the core ompetencies of each agency. Within the USG, each agency's strengths also complement and supplement the Emergency Plan program areas that other agencies are unable to support. Because of the continuous internal agency interplay, the USG in Zambia is successful in negotiating a strong, concerted effort to battle HIV/AIDS in Zambia. Achievement of Emergency Plan goals in FY05 and over the next five years is highly dependent on\nadequate staffing not only on the ground, but also within the Mission. As the Emergency Plan grows in Zambia, the USG will increase its technical and administrative staff across agencies in order to manage the increased programming successfully and efficiently in order to meet the 2-7-10 goals InInAs programs unfold in FY04, it has become increasingly clear that USG agencies that do not currently have dedicated technical staff to oversee and implement HIV/AIDS programs (e.g., Peace Corps, DOD) need to expand their staff. In the FY05 plan, more dedicated HIV/AIDS program and administrative staff will be hired in order to not only manage the Emergency Plan, but also to maintain a continuous dialogue with the GRZ, ZDF, donor community and USG Partners on the Emergency Plan. \\n\n\n\n\n\neq Department of State will be requesting administrative assistance for the Emergency Plan Coordinator (which will be funded by Post in the interim). Technical and management staff are being hired at USAID, CDC, DOD and Peace Corps in order to support the Emergency Plan program in addition to the existing projects. Increased staffing in FY05 will ensure smoother Emergency Plan operations at Post and with partners in-country.

| Activity Narrative:                            | To facilitate the achievement of Emergency Plan goals, CDC-Zambia plans to hire additional staff that include 3 new US direct hires (total of 4 USDH in FY05), contract staff (4 fellows in FY05), and 12 additional Foreign Service Nationals (total of 24 FSN staff in FY05). The new hires will scale up technical implementation of activities that have been established with the Ministry of Health, Central Board of Health, University Teaching Hospital, and HIV/TB/STI national laboratories in Zambia. Three new approved US FTEs will receive staff relocation assistance, including travel of employee and dependents, temporary and permanent housing, storage and shipping of household goods, etc. The travel budget also has both international travel (TDYs, training, meetings, conferences) and local travel (USG strategic planning meetings, partners meetings, workshops, and site visits).   |
|  | Transportation of Goods includes miscellaneous shipments from Atlanta, regional and local shipments such as computers and office equipment. The Printing/Reproduction budget includes dissemination of FY05 Country reports, several routine, annual and compiled and bound reports, presentations, training and other materials, bulletins and manuals. Contractual Services include Technical Assistance, RPSO Frankfurt (WCF for handling of CDC procurement and renovation contracts), ICASS, Internet/ IT Services, vehicle fleet fuel and service, and warehousing etc. An HIV/AIDS resource library will also be established and  |
| Activity Category                              | this will require continuous subscriptions.  New assets and equipment will be required, namely servers, computers for new hires, 2 new vehicles to assist in the execution of co-ag and other Emergency Fund tasks, and furniture for new USDH and other staff. Internet networking will also be upgraded and strategic information technology support to the Ministry of Health will be increased.  % of Funds  |

Table 3.3.15: PROGRAM PLANNING: ACTIVITIES BY FUNDING MECHANISM

Mechanism/Prime Partner:

Deferred PC / US Peace Corps

Planned Funds: Activity Narrative:

This activity is partially funded using deferred funds. Peace Corps presently supports its Volunteers with a staff of 30-35 people. All members of the staff are in some way involved with existing Volunteer efforts to combat the HIV/AIDS

epidemic at the community level.

Five additional staff members have been contracted using Emergency Plan funding. The Crisis Corps Coordinator, together with the Associate Peace Corps Country Director for the i iiVAIDS project, will manage the key components of the program. A Program Assistant, Administrative Assistant/Secretary and a Driver will support them. All have been hired under the terms of one year, renewable, personal service contracts. It is anticipated that at least one additional person supporting the medical office will be needed when the new Volunteers arrive.
