NIH eRA iEdison Version 2.0.19.0 Release Notes

Re-assigning an Invention

When re-assigning an invention to a *different* user, the system would not update the last_upd_id field in the database. This would result in false information displayed in the weekly reports.

The application has been modified to update the value contained in the last_upd_id database field.

Creating User Accounts

Previously, when an administrator attempted to create a user account on Create Account page (IEDISON3000), the application would fail to create the account unless the user account being created had administrative privileges.

The application has been corrected to allow the administrator to create any user account.
