

Office of Advanced Scientific Computing Research

2007 Applied Mathematics Research Program Annual PI Meeting

May 22 – 24, 2007

POSTER SESSION

Tuesday, May 22, 2007

No.	Title	Authors
1	Predicting the Electronic Properties of 3D, Million Atom Nanostructures	A. Canning, O. Marques, C. Voemel, L-W Wang , Lawrence Berkeley National Laboratory ; S. Tomov, J. Langou and J. Dongarra, University of Tennessee; Knoxville
2	Density matrix methods as eigensolver replacements in density functional theory	Richard Muller, Rich Lehoucq, Sandia National Laboratories
3	Inverse Problem in Seismic Imaging	Maria Cameron, LBNL, Sergey Fomel (UT Austin), Jamie Sethian, LBNL
4	Spectral Methods for the Analysis of Stochastic Dynamical Systems	Bert Debusschere, Sandia National Laboratories, Livermore, CA; Habib Najm, Sandia National Laboratories, Livermore, CA; Dongjin Kim, Georgetown University, Washington, DC; Olivier Le Maître, Université d'Evry Val d'Essonne, Evry, France
5	A network-particle computational method for dense suspensions	Alexander Panchenko, Department of Mathematics, Washington State University; Alexander Tartakovsky, PNNL)
6	New Results from "VEGA" Vulnerability of Electric Grids Analyzer	Javier Salmeron, Kevin Wood, Naval Postgraduate School
7	A multiscale coupling of continuum elasto-viscoplasticity and discrete dislocation dynamic	Firas Akasheh, Washington State University; Hussein M. Zbib, Washington State University
8	Multiscale Models of Morphogenesis	Mark Alber, University of Notre Dame
9	Multilevel Upscaling in Multiscale Modeling and Parameter Estimation	David Moulton (co-PI), Los Alamos National Laboratory, Los Alamos, NM; Daniel Tartakovsky (co-PI), LANL/UCSD; Scott MacLachlan, Delft University of Technology, The Netherlands; Ethan Coon, Columbia University, New York, NY
10	Coarse-graining and microscopic reconstruction in simulations of stochastic systems	Petr Plechac, Oak Ridge National Laboratory
11	Convergence Analysis for Takizuka & Abel and Nanbu's Collision Models	CM Wang, University of California, Los Angeles; Tungyou Lin, University of California, Los Angeles; Russel Caflisch, University of California, Los Angeles; Bruce Cohen, Lawrence Livermore National Laboratory; Andris Dimits, Lawrence Livermore National Laboratory
12	Fast Marching Methods for the continuous Traveling Salesman Problem	Jane Andrews, Department of Mathematics, University of California Berkeley; James Sethian,
13	Statistical Mechanics and Complex Dynamics in Rapidly Rotating Bounded Flows	Chjan Lim, Rensselaer Polytechnic Institute

Office of Advanced Scientific Computing Research

2007 Applied Mathematics Research Program Annual PI Meeting

May 22 – 24, 2007

POSTER SESSION

Tuesday, May 22, 2007

No.	Title	Authors
14	Towards 1,000,000 Atom First Principles Electronic Structure Simulation Code	William A. Shelton, Oak Ridge National Laboratory
15	A Linear Scaling 3-Dimensional Fragment Method for Petascale Nanoscience Simulations	Zhengji Zhao, Lin-Wang Wang, Juan Meza, Computational Research Division, Lawrence Berkeley National Laboratory
16	Analytic Jacobians in the Solution of Nonlinear PDEs	Paul D Hovland, Argonne National Laboratory; Boyana Norris, Argonne National Laboratory
17	Parallel Optimization Using TAO	Jorge More, ANL/MCS Division; Todd Munson, ANL/MCS Division; Jason Sarich, ANL/MCS Division
18	A polynomial-time interior-point method for conic optimization, with inexact barrier evaluations	Simon P. Schurr, University of Waterloo; Dianne P. O'Leary, Andre L. Tits, University of Maryland
19	Convergence of a Constraint-Reduced Variant of Mehrotra's Predictor-Corrector Algorithm	Luke Winternitz, Stacey Nicholls, Andre L. Tits, Dianne P. O'Leary, University of Maryland
20	Convex Duality and Entropy-Based Moment Equations: Characterizing Degenerate Densities	Cory D. Hauck, Los Alamos National Laboratory; Andre L. Tits, C. David Levermore, University of Maryland
21	A Fitness Landscape Analysis of the Capacitated Vehicle Routing Problem	Jean-Paul Watson, SNL
22	Recent Advances in High Order methods for Simulation of Richtmyer-Meshkov Instability	David Gottlieb and Wai-Sun Don Brown University

Office of Advanced Scientific Computing Research

2007 Applied Mathematics Research Program Annual PI Meeting

May 22 – 24, 2007

POSTER SESSION

Wednesday, May 22, 2007

No.	Title	Authors
1	An Eigensolver with Lowrank Updates for Spin-Fermion Models	E. D'Azevedo*, P. Nukala, G. Alvarez, Computer Science and Mathematics Division, Oak Ridge National Laboratory
2	A simple, fast, high-order Helmholtz solver	Leonid Kunyansky, University of Arizona
3	Robust and Scalable Factorization-based Preconditioners Suitable for Petascale Simulations	Ming Gu, University of California at Berkeley; Xiaoye Sherry Li, Lawrence Berkeley National Lab; Panayot S. Vassilevski, Lawrence Livermore National Lab°
4	Adaptive Multimethod Linear Solvers for Nonlinear PDEs	Lois Curfman McInnes, Argonne National Laboratory; Boyana Norris, Argonne National Laboratory; Sanjukta Bhowmick, Argonne National Laboratory and Columbia University; Dinesh Kaushik, Argonne National Laboratory; Padma Raghavan, Penn State University
5	AMS: A Scalable Maxwell Solver	Tanio Kolev, Panayot Vassilevski, LLNL
6	3D Boundary Integral Analysis by a Fast Spectral Method	S. Nintcheu Fata, L. J. Gray, T. Kaplan, ORNL
7	Multiscale numerical methods for flows in heterogeneous porous media using limited global information	Yalchin Efendiev, Texas A&M, Tom Hou (Caltech), Victor Ginting (Colorado State)
8	Low Mach Number Modeling of Type Ia Supernovae	Ann S. Almgren, John B. Bell, Mike Zingale, * LBNL
9	A Stable Finite Difference Method for the Elastic Wave Equation on Complex Domains with Free Surface Boundary Conditions	Daniel Appelo, LLNL; Anders Petersson, LLNL; Bjorn Sjogreen, LLNL
10	Characterization of Implicit LES Methods	A. J. Aspden, LBNL; J. B. Bell, LBNL
11	Comparison of Flux-Corrected-Transport and High Resolution Godunov Methods on Overlapping Grids	J. W. Banks, Sandia National Laboratory; J. N. Shadid, Sandia National Laboratory
12	Domain Adaptive High Order Accurate Algorithms for PDEs in Moving Geometry	Bill Henshaw, Kyle Chand, LLNL
13	A Cartesian AMR framework for detonation- and shock-driven fluid-structure interaction sim	Ralf Deiterding, ORNL

Office of Advanced Scientific Computing Research

2007 Applied Mathematics Research Program Annual PI Meeting

May 22 – 24, 2007

POSTER SESSION

Wednesday, May 22, 2007

No.	Title	Authors
14	High-Resolution Discretization of the Gyrokinetic Vlasov-Poisson Equation on Mapped Grids	M. Dorr, Lawrence Livermore National Laboratory; J. Hittinger, Lawrence Livermore National Laboratory; P. Colella, Lawrence Berkeley National Laboratory; D. Martin, Lawrence Berkeley National Laboratory
15	Lagrangian Simulations of Combustion	Ahmed F Ghoniem, Massachusetts Institute of Technology; Fabrice Schegel, Massachusetts Institute of Technology; Daehyun Wee, Massachusetts Institute of Technology
16	Implicit Interface Finite Element Method for Elliptic Interface Problems	Jae-Seok Huh, Student, Department of Mathematics, UC Berkeley; James A. Sethian, Professor of Mathematics, UC Berkeley
17	The Analysis of Particle Migration in Dilute Suspensions Using a TC-BEM	Marc Ingber (U of New Mexico), Alan Graham (LANL), Shihai Feng (LANL), Lisa Mondy (SNL)
18	Mimetic Discretizations	Konstantin Lipnikov, Los Alamos National Laboratory; Mikhail Shashkov, Los Alamos National Laboratory
19	Computational Nanophotonics and NEKCEM	Misun Min, Argonne National Laboratory; Paul Fischer, Mathematics and Computer Science Division
20	Solving PDEs on Irregular Domains with Moving Interfaces	Ying Shan, Lawrence Berkeley National Laboratory; J.A. Sethian, Lawrence Berkeley National Laboratory
21	A subgrid-Scale Turbulence Model for Simulating Compressible Flows	Paul R. Woodward, University of Minnesota
22	Implementing an Interior Point Method for Linear Programs on a CPU-GPU System	Jin Hyuk Jung, Dianne O'Leary, University of Maryland
