

Workshop on ATP Initiatives in Healthcare Informatics

November 16, 1999, 8:30 - 5:00 p.m.

**Track 3: Information Technology
1999 ATP National Meeting, November 15-17**

http://www.atp.nist.gov/nationalmeeting/ihc_agen.htm

**DoubleTree Hotel
San Jose, California**

ABOUT THE ADVANCED TECHNOLOGY PROGRAM

NIST's Advanced Technology Program (ATP) provides competitive, cost-shared awards for industry to develop high-risk, enabling technologies with broad-based economic benefit. ATP seeks to help industry fill the gap between basic research and product development, and to invest in technology that would not be developed in a competitive time frame without government cost-sharing.

Healthcare Challenges of the 21st Century

Emerging healthcare challenges are upon us as we enter the 21st century. Americans are looking for quality, cost-effectiveness, and personal satisfaction from their healthcare providers. The healthcare industry, responding to this highly competitive market, is reorganizing, consolidating, and integrating to form a new healthcare delivery structure that will enable the delivery of high quality, cost-effective care to everyone.
