

History of Science 176

Fall, 2001

EVOLUTION AND THE MIND

Questions and Controversies

Instructor: Anne Harrington

Meeting time: Thursdays, 2-4 PM

Venue: Science Center 226

How has Darwin's 1859 theory of evolution changed the ways in which questions about the nature and condition of our humanness could be asked? In particular, how has it changed the ways we think about that part of ourselves that most clearly makes us human: our minds? In this course, we are interested in better understanding how people over time have engaged these questions. We are interested, not just in the scientific issues, but also in the social, ethical and existential stakes raised by the range of efforts to think about the human mind as a product of evolution.

Our way in to these issues is via a close reading of a series of both exemplary and influential statements and debates ranging from the 19th to the mid-20th century, and covering themes ranging from: the purpose of consciousness, the basis for ethics and moral responsibility, our relations with other species, our prospects of finding religious consolation in a post-Darwinian era, the relationship between what the mind is and what the mind can know, and more. Many of you have probably been exposed to some of the most current literature on one or another of these issues. One goal of this course is to help you begin to stretch the historical frame within which you think about the questions, and improve your facility to think critically about the relationship between "where we were" and "where we are" on each of them.

In addition to providing a disciplined schedule of reading and discussion, this course also gives you an opportunity to carry out an original research project, for which you will each receive individual guidance. During the final three weeks, we will transform this course into a research seminar and you will present a formal (graded) report to the class on your project-in-progress. Final papers will be due at the end of Reading Period.

Notes on Readings: The *primary source* readings for this course (listed below for each week) are all available in the form of a sourcebook, that you can purchase from Gnomon

Copy on 1218 Mass Ave in Harvard Square.. They represent a broad plan for the semester: we may make cuts, substitutions and other adjustments as we go along.

There is a huge *secondary source* literature on the history of Darwinism, evolutionary theory, and the human condition. As part of your research project, you will be expected to gain competence in some small subsection of that literature (guidance will be provided). In addition, each week, you will read several relatively brief secondary sources in the form of on-line essays, book reviews, or hypertext web sites. The on-line structure was chosen, among other reasons, to encourage you to go beyond the printed requirements of the syllabus, as themes catch your interest or terms and issues remain unclear. Occasionally I will hold "mini-lectures" to provide still more historical context of the week's readings.

Optional background readings on reserve at Hilles and Lamont are Robert J. Richards, *Darwin and the emergence of evolutionary theories of mind and behavior* (Chicago: University of Chicago Press, 1987); Robert Boakes, *From Darwin to behaviourism : psychology and the minds of animals* (New York: Cambridge University Press, 1984)., and Ullica Segerstrale, *Defenders of the Truth : The Sociobiology Debate* (New York: Oxford University Press, 2001)

Formal Requirements: Class participation (including assigned individual and small group presentations) and two discussion papers, 5-7 pages (60%); historical research paper (including presentation of your work-in-progress), c. 15 pages (40%)

September 13 (week one):

Second discussion paper due at this meeting!!

November 22 (week eleven)

THANKSGIVING BREAK

November 29 (week twelve):

NO CLASS:

Individual meetings with instructor to discuss research projects

December 6 (week thirteen):

Presentation of student research projects

December 13 (week fourteen)

Presentation of student research projects

NOTE: Final research papers are due on the last day of Reading Period, at 5:00 pm!
