Subject: A-76 Comments

AERO-METRIC, INC. is a photogrammetric mapping company that supplies geospatial data to many Federal agencies and we are interested in commenting on the proposed revisions to A-76.

We support the A-76 revision as it will open up jobs to all Americans, including small businesses. Entrepreneurs and workers will have new opportunities to seek work previously unavailable to the private sector and it will help eliminate unfair government competition.

We particularly support the provisions that eliminate Unfair Competition under Agency-to-Agency arrangements. We strongly support the provisions in the Circular that eliminate the current practice that permits agencies to do work for other Federal agencies, and for state and local government.

"Geospatial activities" such as surveying, mapping, charting, geodesy, image acquisition, and geospatial information acquisition and production are all commercial activities. We strongly direct conversation of these activities to the private sector.

We urge a clarification in the Circular that any public-private standard competitions under A-76 for architecture, engineering, surveying and mapping services be in compliance with the Brooks Act's qualifications, based selection (QBS) process, as required in 40 United State Code, section 541-544 and part 36 of the Federal Acquisition Regulation (FAR).
